NOTICE OF PREPARATION and NOTICE OF PUBLIC SCOPING MEETING

Date:	July 10, 2019
To:	Reviewing Agencies, Interested Parties and Organizations
From:	City of Moorpark, Lead Agency
Applicant:	Comstock Homes
Subject:	Notice of Preparation and Scoping Meeting for an Environmental Impact Report for the Hitch Ranch Specific Plan

The City of Moorpark is considering the Hitch Ranch Specific Plan, and has determined that an Environmental Impact Report (EIR) will be necessary to evaluate environmental impacts of the project, pursuant to the California Environmental Quality Act (CEQA). In compliance with CEQA, the City will be the Lead Agency and will prepare the EIR. Attached are the project description, location maps, and preliminary identification of the potential environmental issues to be analyzed in the EIR.

The City is requesting comments and guidance on the scope and content of the EIR from responsible and trustee agencies, interested public agencies, organizations, and the general public (CEQA Guidelines 15082). If your agency is a responsible agency as defined by Section 15381 of the CEQA Guidelines, your agency may use the environmental documents prepared by the City when considering permits or approvals for action regarding the project.

Public Review Period: July 10, 2019 to August 8, 2019. The City requests review and consideration of this notice, and invites comments regarding the preparation of the EIR. Comments and responses to this notice must be in writing and submitted by the close of business on August 10, 2019, the last day of the comment period. Please provide a contact name, phone number and e-mail address with your comments. All comments must be sent to:

Douglas Spondello, Planning Manager
City of Moorpark
799 Moorpark Avenue, Moorpark, CA 93021
(805) 517-6200 I dspondello@moorparkca.gov

Notice of Scoping Meeting: A scoping meeting to collect oral comments on the scope of the EIR will be conducted by the Planning Commission on July 23, 2019 at 7:00 p.m. at City Hall, 799 Moorpark Avenue, Moorpark in the Council Chambers. If you have any questions, please contact me.

hrapista@comstock-homes.com / (424) 363-9218

Project Location

Regionally, the project site is located in southeastern Ventura County in the City of Moorpark, between the Simi Hills and Little Simi Valley. Locally, the project site is located in the rolling hills north of Poindexter Avenue, and west of Moorpark Avenue (State Route 23). Specifically, the site is approximately 270.64 acres, is located approximately 1,600 feet west of State Route 23, and extends to approximately 1,400 feet west of Gabbert Road. The regional location map (**Figure 1**, **Regional Location**) and site vicinity map **(Figure 2**, **Local Vicinity Map**) illustrate the project site in both a regional and local context.

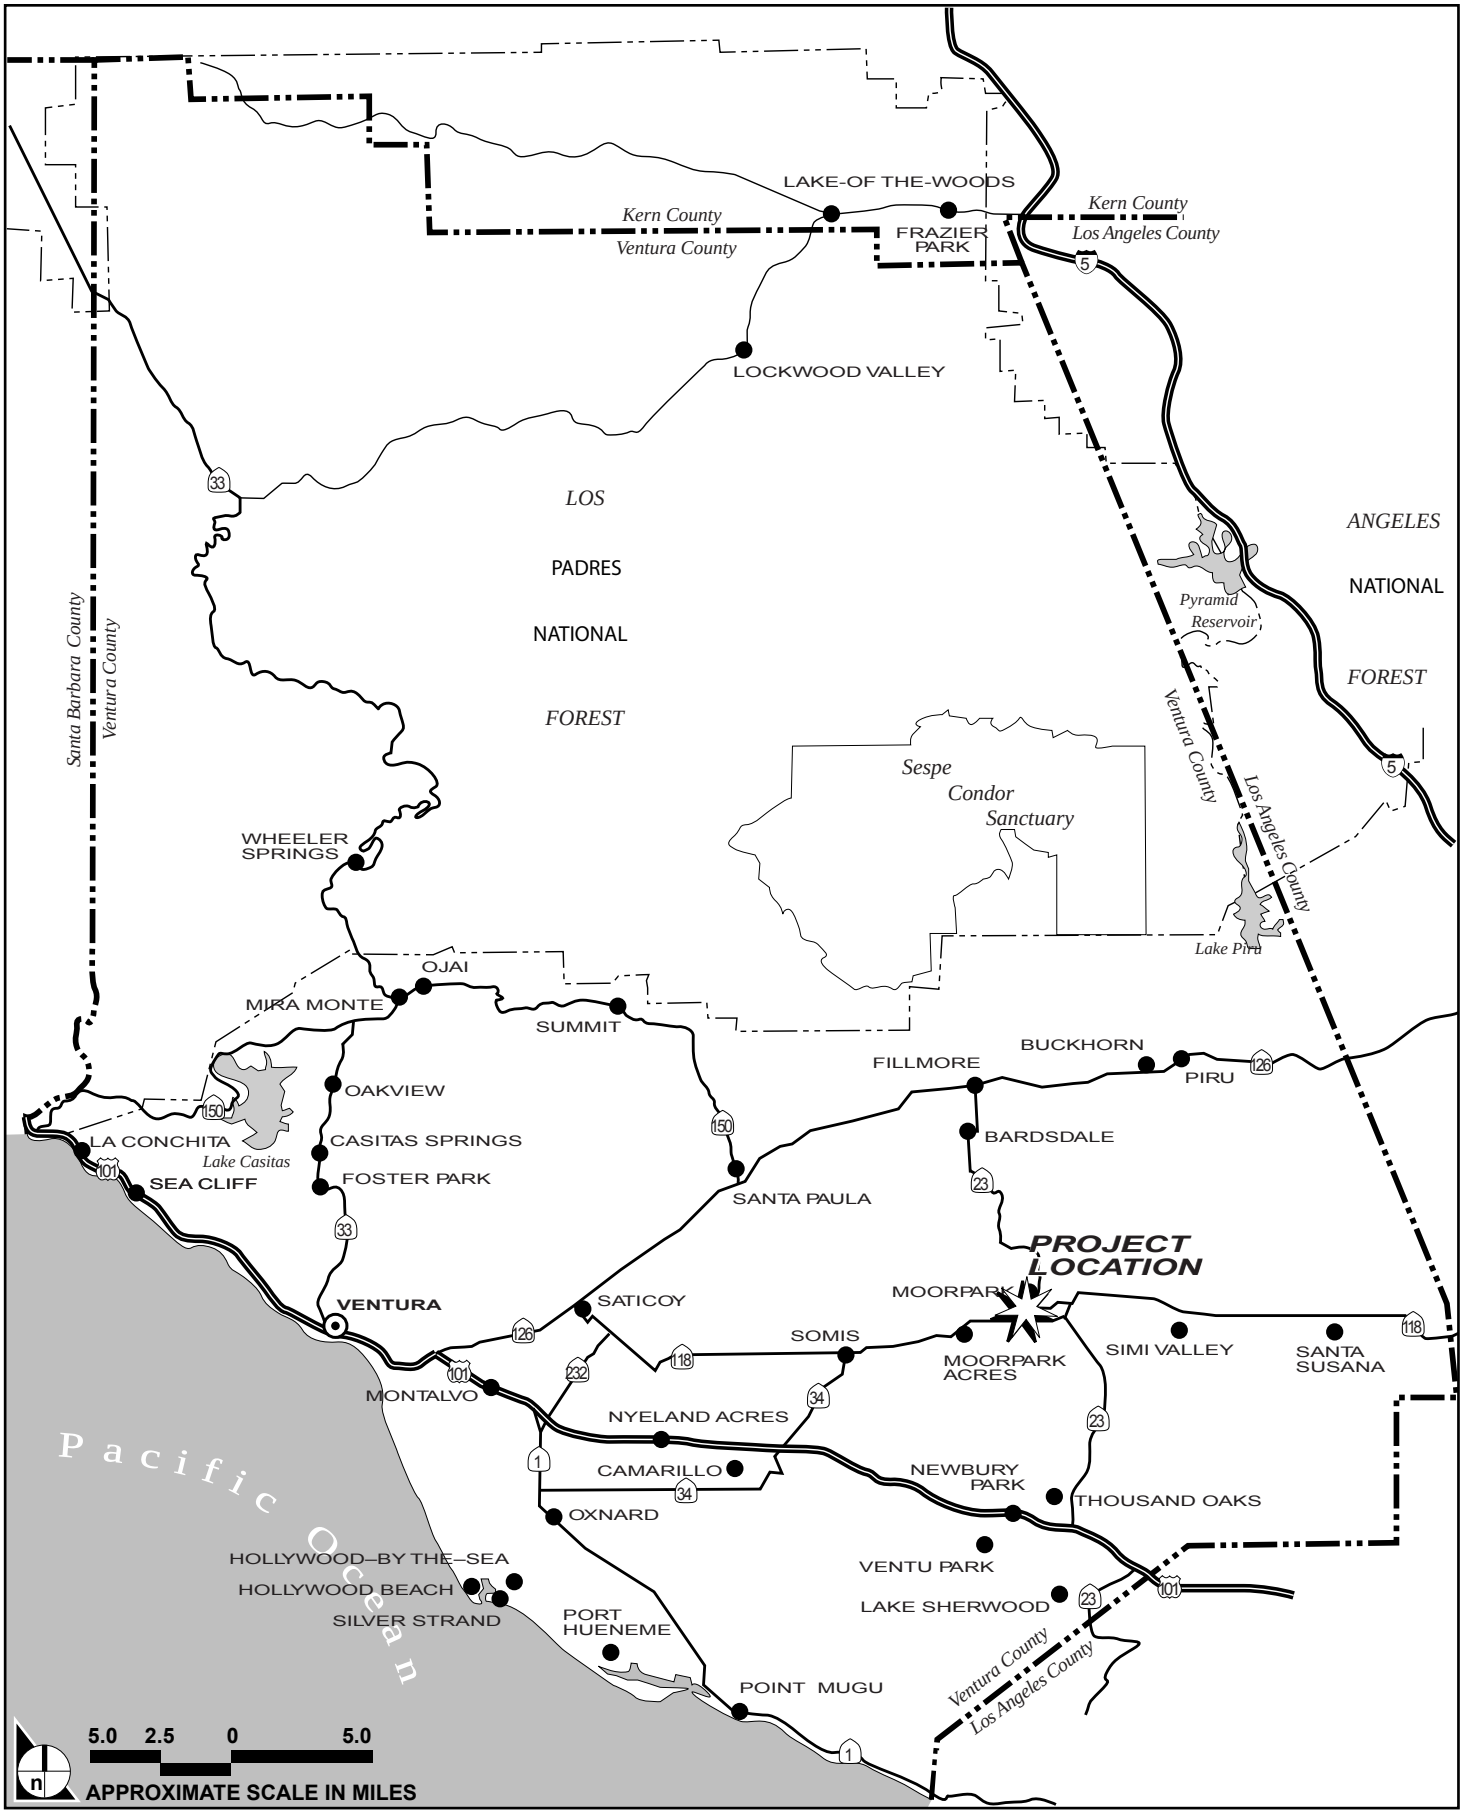
The project site is designated in the *City of Moorpark General Plan* Land Use Element as Specific Plan Area 1, with an Agriculture 1 overlay and has a zoning of Agricultural Exclusive (AE). The specific plan designation is provided to address large-scale projects, and is intended to provide a planning tool for the systematic implementation of the general plan.

The specific plan site comprises of the following parcels:

Parcel 1: Assessor Parcel No: 511-0-020-11
Parcel 2: Assessor Parcel No: 511-0-020-13
Parcel 3: Assessor Parcel No: 511-0-020-16
Parcel 4: Assessor Parcel No: 511-0-020-17
Parcel 5: Assessor Parcel No: 511-0-020-18
Parcel 6: Assessor Parcel No: 511-0-020-19
Parcel 7: Assessor Parcel No: 511-0-200-22

Project Description

The proposed Hitch Ranch Specific Plan is designed as a mixed-density residential community that incorporates land uses for housing, recreational and institutional purposes.



The following discussion describes land uses proposed as part of the proposed specific plan, the relationship of individual land uses within the framework of the overall land plan, and infrastructure improvements necessary to support the development as proposed.

Table 1, Specific Plan Statistical Summary, provides a summary of the proposed project in terms of the number of dwelling units, square footage of non-residential uses, and facility improvements, and **Figure 3, Specific Land Use Plan**, illustrates the proposed land plan.

Table 1

FIGURE 3

Specific Land Use Plan

IMPACT SCIENCES

1318.001•07/19

The proposed specific plan provides for the arrangement of various land uses on the 270.64-acre project site. Proposed land uses include several types/intensities of residential land uses, a neighborhood park site, and flood-control facilities. Other improvements include storm drains, water mains, sanitary sewer lines, electric lines, natural gas lines, and telephone and cable lines.

Residential Development

Residential uses constitute a primary component of the Specific Plan. As proposed, implementation of the Specific Plan would result in the development of 755 dwelling units. **Table 1, Specific Plan Statistical Summary**, provides a summary of the proposed residential land use types and densities and approximate acreages devoted to each land use type. Proposed residential uses would consist of 755 dwelling units on 100.24 gross acres including 261 single-family units on 59.94 acres and 494 multi-family units on 34.33 acres. Single-family structures would be one and two stories in height, while multi-family structures would be two and three stories in height. The densities for single-family dwelling units range from 1.29 to 2.92 (gross) dwelling units per acre (low to medium density); multi-family unit density would be 7.68 to 14.81 (gross) dwelling units per acre. Single-family dwelling units are proposed for Planning Areas 1 and 2, and multi-family dwelling units are proposed for Planning Areas 3 and 4.

The proposed project will comply with the City of Moorpark General Plan affordable housing policies and the provision of affordable housing, the manner of which will be detailed in the negotiated Development Agreement.

Parks and Recreational Uses

Four private recreation areas are proposed as part of the specific plan. Within Planning Area 2, 3.97 acres of passive and active (1.32 passive and 2.65 active) recreation area is planned. Planning Area 3 is proposed to have up to 4.1 acres of recreation area. Another private recreation area is planned within Planning Area 4 with the area to be determined. A 6-acre public park is proposed in the southeast corner of the specific plan area, adjacent to the City of Moorpark Civic Center property. While the public park is tentatively planned to include athletic fields (including softball) and an aquatic facility, the specific improvements will ultimately be determined by the negotiated Development Agreement.

Other Improvements

In addition to the land uses described above, the specific plan area will include on-site regional storm water detention basins, and project infrastructure, including streets and utility facilities. Further, an approximately six acre parcel of land that is currently part of the project site would be a deeded to the City of Moorpark for the future development of affordable housing.

Off-Site Improvements

As part of the proposed project, Casey Road is proposed to be widened to the east of the project site from the easterly boundary to approximately 440′ west of Walnut Canyon Road. The remaining easterly portion of Casey Road would be built by other projects with frontage on Casey Road. High Street is proposed to be built across the project site from Gabbert Road to the easterly boundary of the project, immediately north of the Walnut Canyon storm drain channel. High Street will be extended offsite to the

east to connect to existing High Street adjacent to the US Post Office, providing direct access to the future Moorpark Civic Center and High Street. Buildings at the northwest corner of High Street and Moorpark Avenue would potentially be impacted.

An offsite gravity sewer connection is proposed in Poindexter Avenue at Sierra Avenue. The onsite connecting sewer main would run perpendicular to and beneath the Walnut Canyon storm drain and the Union Pacific Railroad/Metro Rail tracks. No interference in rail operations is anticipated as the sewer main would be installed utilizing a bore pit and jacking method of installation. Domestic water service would be connected at the site boundary at Meridian Hills Drive, High Street, and Casey Road and be pressure-looped through the project site. All other utilities are present at the site boundary and would be extended onsite.

Implementation of the project would require the following discretionary approvals by the City of Moorpark:

- Specific Plan Approval (SP 2019-01) to establish the framework for development of the land, including development standards, design guidelines, phasing and infrastructure requirements.
- Rezoning (ZC 2012-01) to the Hitch Ranch Specific Plan to establish consistency between the project Zoning and General Plan/Specific Plan land use designations.
- Tentative Subdivision Map for Tract No. (TSM 2019-01) allows for the mapping of on-site project parcels, easements, dedications, roadways, utilities and defines adjacent off-site improvements required for the project.
- Residential Planned Development Permit(s) to establish the physical site plan layout of each individual Planning Area within the Specific Plan, including street and neighborhood amenity locations, community plot plans, conceptual landscape architecture, architectural elevations and preliminary floor plans.
- Development Agreement (DA No. 2019-01) to ensure orderly development of the project.
- A General Plan Amendment may be required to implement the Specific Plan and establish consistency between the Land Use and Circulation Elements of the General Plan and the adopted Specific Plan.

Subsequent Actions

Subsequent actions could include the following:

- Final tract maps and parcel maps
- Conditional use permits
- Grading permits
- Subdivision improvement plan permits
- Haul route approval
- Building permits
- Acquisition of easements and rights-of-way and construction of roads and access ways

- Homeowner Association formation
- Tree removal permit
- Encroachment permits
- Utility connection permits
- Retaining wall permits
- Formation of a Community Facilities District

Responsible and Trustee Agencies

The project could require review and/or approval from the following other jurisdictional agencies:

Ventura County Agencies and Special Districts

- Ventura County Air Pollution Control District
- Ventura County Fire Protection District
- Ventura County Transportation Commission
- Ventura County Waterworks District No. 1
- Ventura County Watershed Protection District

State of California Agencies

- State of California, Regional Water Quality Control Board
- California Department of Fish and Wildlife
- California Department of Transportation
- California Public Utilities Commission

Federal Agencies

- US Department of the Interior Fish and Wildlife Service
- US Army Corps of Engineers

EIR Purpose

The purpose of an EIR is to inform decision-makers and the general public of the environmental impacts of a proposed project that an agency (in this case, the City of Moorpark) may implement or approve. The EIR process is intended to: (1) provide information sufficient to evaluate a project and it's potential for significant impacts on the environment; (2) examine methods (e.g., project-specific mitigations, uniformly applied development regulations) for avoiding or reducing significant impacts; and (3) consider alternatives to the proposed project.

In accordance with CEQA, the EIR will include the following:

- A summary of the project, its potential significant environmental impacts, and mitigations required to avoid or reduce those significant impacts;

- A project description;
- A description of the existing environmental setting, potential environmental impacts, and mitigations for the project;
- Alternatives to the proposed project; and
- Other environmental consequences of the project, including:
    - growth-inducing effects
    - significant unavoidable impacts
    - irreversible environmental changes
    - cumulative impacts, and
    - effects found not to be significant.

EIR Scope

The City of Moorpark has determined that the project will require preparation of an EIR pursuant to the California Environmental Quality Act (CEQA).

An **Initial Study** has been prepared in accordance with CEQA and the CEQA Guidelines to identify potential environmental impacts that will be addressed in the EIR. The Initial Study also includes a description of the proposed project. A copy of this NOP and the Initial Study supporting the scoping of the project EIR are available for viewing at Moorpark City Hall, and Moorpark City Library, and available downloading from the City of Moorpark website at http://www.moorparkca.gov/568/Environmental-Documents.

The following environmental topics are discussed in the Initial Study:

- Aesthetics
- Agriculture and Forestry Resources
- Air Quality
- Biological Resources
- Cultural Resources
- Energy
- Geology / Soils
- Greenhouse Gas Emissions
- Hazards & Hazardous Materials
- Hydrology / Water Quality
- Land Use / Planning
- Mineral Resources
- Noise
- Population / Housing
- Public Services
- Recreation
- Transportation
- Tribal Cultural Resources
- Utilities / Service Systems
- Wildfire
- Mandatory Findings of Significance

Alternatives: The EIR will identify and compare a reasonable range of alternatives to the proposed project. Alternatives will be chosen based on their ability to avoid or reduce identified significant environmental impacts of the project while achieving most of the project objectives (CEQA Guidelines Section 15126.6).

INITIAL STUDY FOR
Hitch Ranch Specific Plan

I. PROJECT

Project Title: Hitch Ranch Specific Plan

Location: Approximately 1,600 feet west of State Route 23, extending to approximately 1,400 feet west of Gabbert Road

Assessor Parcel Number(s):

Parcel 1: Assessor Parcel No: 511-0-020-11
Parcel 2: Assessor Parcel No: 511-0-020-13
Parcel 3: Assessor Parcel No: 511-0-020-16
Parcel 4: Assessor Parcel No: 511-0-020-17
Parcel 5: Assessor Parcel No: 511-0-020-18
Parcel 6: Assessor Parcel No: 511-0-020-19
Parcel 7: Assessor Parcel No: 511-0-200-22

Parcel Size: 270.64 acres

Applicant: Comstock Homes

Owner: Hitch Ranch, Milligan et. al.

General Plan Designation: Specific Plan No.1, with Agriculture 1 Overlay

Zoning: AE (Agricultural-Exclusive)

Proposed Zoning: Specific Plan

Responsible or Trustee Agencies: US Department of the Interior Fish and Wildlife Service (USFWS), US Army Corps of Engineers (USACE), California Department of Fish and Wildlife CDFW), California Department of Transportation (Caltrans), State of California, Regional Water Quality Control Board (RWQCB), California Public Utilities Commission (CPUC), Ventura County Air Pollution Control District (VCAPCD), Ventura County Fire Protection

District (VCFPD), Ventura County Transportation Commission (VCTC), Ventura County Waterworks District No. 1, Ventura County Watershed Protection District (VCWPD)

Tribal Consultation Requested: ☒ **YES** ☐ **NO**

Have any California Native American Tribes traditionally or culturally affiliated with the project area requested consultation pursuant to PRC Section 21080.3.1? As requested, the City will conduct outreach to the Coastal Band of Chumash Indians and Barbareno/Ventureno Band of Mission Indians.

Project Location

Regionally, the project site is located in southeastern Ventura County in the City of Moorpark, between the Simi Hills and Little Simi Valley. Locally, the project site is located in the rolling hills north of Poindexter Avenue, and west of Moorpark Avenue (State Route 23). Specifically, the site is approximately 270.64 acres, is located approximately 1,600 feet west of State Route 23, and extends to approximately 1,400 feet west of Gabbert Road. The regional location map (**Figure 1, Regional Location**) and site vicinity map (**Figure 2, Local Vicinity Map**) illustrate the project site in both a regional and local context.

Surrounding Land Uses

Land uses surrounding the Hitch Ranch Specific Plan site, as well as their general plan and zoning designations are identified in **Table 1, Surrounding Land Uses**. Land uses surrounding the project site include Walnut Canyon Elementary School and a few single-family homes immediately to the east. In addition, a post office, the City Civic Center, Mansi Senior Housing Project, and Essex site are located to the east, and the Moorpark downtown area about 0.25 mile further east. A mix of institutional, residential, light industrial and commercial land uses occurs to the south. Among the uses to the south are Poindexter Park and Chaparral Middle School. Single-family homes, at rural densities, and open space are located to the west. Residential development and open space uses are located to the north. A Ventura County Watershed Protection District concrete flood control channel (Walnut Canyon Channel) borders the southern site boundary. The Ventura County Transportation Commission/Union Pacific Railroad tracks are located just south of the flood channel. Poindexter Avenue, immediately south of the railroad right-of-way, is a two-lane local collector between Moorpark Avenue on the east and Gabbert Road to the west.

Site characteristics

The project site is designated in the *City of Moorpark General Plan* Land Use Element as Specific Plan Area 1, with an Agriculture 1 overlay and has a zoning of Agricultural Exclusive (AE). The specific plan designation is provided to address large-scale projects, and is intended to provide a planning tool for the systematic implementation of the general plan.

The 270.64-acre project site is undeveloped and vacant. Its topography contains hills and is characterized by a series of moderately sloped northeast and southwest-trending ridge spurs with intervening southwest-draining valleys. Fires in 2003 and 2006 completely burned the project site. An east-to-west trending knoll occurs in the south-central portion of the site. The flat area along the southern site periphery represents the geomorphic transition from hillside area to the valley area of Moorpark. The site is visible from Los Angeles Avenue (State Route 118). East-west-trending hills through the middle of the site block views of much of the site's interior from passing motorist or residents on the south side of Poindexter Avenue. Additional north-south-trending hills at the eastern and western ends of the site block views of the site's interior.

Existing On-Site Land Uses

The project site is a gently rolling, 270.64-acre parcel located in the west/central portion of the City of Moorpark, between the Simi Hills and the Little Simi Valley (see **Figure 1**). The topography of the site ranges from a low elevation of 475 feet above mean sea level (msl) at the Gabbert Road railroad crossing, up to elevation 720 feet msl at the north edge of the site. Soils are mainly comprised of alluvium in the low areas, along with weakly cemented bedrock on the hillsides and hilltops. An east-west trending series of hills through the middle of the site blocks views of much of the site interior from passing motorists or residents on the south side of Poindexter Avenue. Additional north-south trending hills block views of the site interior, from vantage points to the east and west of the site.

The specific plan site is predominately undeveloped. The site contains limited improvements to accommodate existing land uses and includes dirt and semi-paved roads, along with remnants of grazing use, including corrals, fences, and watering facilities for grazing animals.

Public access to the site is presently available from Gabbert Road on the west and from Casey Road on the east. The majority of the site, approximately 243 acres, lies on rolling hills east of

Gabbert Road. The smaller balance of the site, approximately 28 acres, lies immediately west of Gabbert Road, and is comprised of two hills with an intervening valley area that widens out along the flood control channel at the south/southwest site boundary.

Eleven overhead electrical transmission lines, within two easements, traverse the western portion of the site in west-to-east and north-to-south alignments. These lines are part of Southern California Edison's (SCE) regional grid system, and they connect to the SCE Moorpark Substation located just southwest of the project site. Lines and voltage ranges include the local Gabbert 16-kilovolt (kV) line; the 66-kV Saugus-Moorpark-Santa Susana-Torrey line; the 220-kV Moorpark-Pardee No. 1, 2, and 3 lines; the 220-kV Moorpark-Santa Clara No. 1 and 2 lines; and the 220 kV Moorpark-Ormond Beach lines.

The project site historically was used for commercial grazing operations, and apricot production in the 1950s and infrequent limited dry farming since then. More recent farming ventures failed commercially and no crop farming has occurred on site for more than a decade. Remnants of the former apricot farming operations burned down in 2003. Limited grazing operations still occur on site. County of Ventura records indicate that at least 15 water wells have been drilled on the site. A water tank is also present in the site's northeastern periphery.

Due to the many years of crop production and grazing, the ground surface has been mostly disturbed and very little native vegetation remains. The predominant plant communities are non-native grassland, with scattered California sagebrush-deerweed, coyote brush scrub, mulefat scrub, and non-native woodland communities. Several stands of mature eucalyptus and pepper trees occur at scattered locations on the site. There are no oak trees or permanent waterways on the site.

Storm runoff flows overland south to the Walnut Canyon Channel, a concrete box channel along the south site boundary. Flat areas along the east side of Gabbert Road and along the south site boundary, extending several hundred feet on either side of Gabbert Road, are within a 100-year flood hazard zone, as mapped by the Federal Emergency Management Agency (FEMA).

Project Description:

The proposed specific plan is designed as a mixed-density community that incorporates land uses, which would help to

- satisfy a regional demand for housing and
- provide local recreational and institutional uses for new residents.

The following discussion describes land uses proposed as part of the specific plan, the relationship of individual land uses within the framework of the overall land plan, and infrastructure improvements necessary to support the development as proposed.

Table 2, Specific Plan Statistical Summary, provides a summary of the proposed project in terms of the number of dwelling units, square footage of non-residential uses, and facility improvements, and **Figure 3, Specific Plan - Land Use Plan**, illustrates the proposed land plan.

The specific plan provides for the arrangement of various land uses on the 270.64-acre project site. Proposed land uses include several types/intensities of residential land uses, a neighborhood park site, an institutional use, and flood-control facilities. Other improvements include storm drains, water mains, sanitary sewer lines, electric lines, natural gas lines, and telephone and cable lines.

Residential Development

Residential uses constitute a primary component of the Specific Plan. As proposed, implementation of the Specific Plan would result in the development of 755 dwelling units. **Table 2, Specific Plan Statistical Summary**, provides a summary of the proposed residential land use types and densities and approximate acreages devoted to each land use type. Proposed residential uses would consist of 755 dwelling units on 100.24 gross acres including 261 single-family units on 59.94 acres and 494 multi-family units on 34.33 acres. Single-family structures would be one and two stories in height, while multi-family structures would be two and three stories in height. The densities for single-family dwelling units range from 1.29 to 2.92 (gross) dwelling units per acre (low to medium density); multi-family unit density would be 7.68 to 14.81 (gross) dwelling units per acre. Single-family dwelling units are proposed for Planning Areas 1 and 2, and multi-family dwelling units are proposed for Planning Areas 3 and 4.

Table 2
Specific Plan Statistical Summary

Area	Land Use		Acres	Dwelling Units/Acre	Dwelling Units (du)
Planning Area 1	Single-Family Dwelling Units		25.86	1.29 gross	84 du
	Natural Open Space		19.69		
	Manufactured Slopes		19.41		
		Subtotal	**64.96**		
Planning Area 2	Single-Family Dwelling Units		34.08	2.92 gross	177 du
	Natural Open Space		7.56		
	Manufactured Slopes		14.91		
	Recreation Lot		2.65		
	Passive Recreation Lot		1.32		
		Subtotal	**60.52**		
Planning Area 3	Multi-Family Dwelling Units		23.46	7.68 gross	253 du
	Manufactured Slopes		5.40		
	Recreation Lot		4.1		
		Subtotal	**32.96**		
Planning Area 4	Multi-Family Dwelling Units		10.87	14.81 gross	241 du
	Manufactured Slopes		5.40		
		Subtotal	16.27		
Planning Area 5	Open Space		3.37		
Planning Area 6	Open Space		29.10		
Public Facilities	Park (adjacent to Civic Center)		6.00		
	North Hills Parkway		11.97		
	"A" Street		4.36		
	Meridian Hills Drive		3.03		
	Casey Road		1.37		
	High Street		6.64		
	Gabbert Road		2.86		
	VCWPD Easement		2.70		
	Detention Basin 3		12.27		
	Detention Basin 2		5.96		
	Detention Basin 2b		6.30		
		Subtotal	**63.46**		
		Totals	**270.64**	2.79 gross	755 du

The proposed project will comply with the City of Moorpark General Plan affordable housing policies and the provision of affordable housing, the manner of which will be detailed in the negotiated Development Agreement.

Parks and Recreational Uses

Four private recreation areas are proposed as part of the specific plan. Within Planning Area 2, 3.97 acres of passive and active (1.32 passive and 2.65 active) recreation area is planned. Planning Area 3 is proposed to have up to 4.1 acres of recreation area. Another private recreation area has been designated within Planning Area 4 with the area to be determined. A 6-acre public park is proposed in the southeast corner of the specific plan area, adjacent to the City of Moorpark Civic Center property.

Open Space

Natural Open Space

"Natural Open Space" is defined as an undeveloped area within the project site, which would remain in its existing condition. A 200-foot fuel modification zone would occur between the natural area and on-site structures. A total of 59.72 acres of natural open space is proposed—the largest area (29.10 acres) being situated in Planning Area 6 west of Gabbert Road. Other natural open space areas are located in Planning Area 1 (19.69 acres) and Planning Area 2 (7.56 acres). This area would provide a buffer between existing residential uses located west of the project site and the single-family residences proposed in Planning Areas 1 and 2.

Manufactured Slopes

Approximately 45.12 acres of the project site are designated as manufactured slopes. Where possible and there is available area to provide for contour grading, the applicant would provide for such grading. The areas that are characterized as graded slopes are adjacent to proposed residential uses in Planning Areas 1 through 4. It is anticipated that these areas would be landscaped with drought-tolerant plants, primarily native or appropriate adaptive plant species. Landscaping would not only serve to stabilize graded slopes (to prevent erosion), but also soften the visual aspect of the project due to site grading for building pads and roadways.

Public Facilities

Some required portions of the Ventura County Watershed Protection District (previously the Ventura County Flood Control District) flood-control master plan facilities are incorporated as part of the proposed project; these facilities would serve the project site and provide flood control for the local drainage basin (i.e., Gabbert and Walnut Canyons). These facilities were identified as part of the *Gabbert and Walnut Canyon Channels Flood Control Deficiency Study*,

which was prepared for the Ventura County Flood Control District (dated March 1997). As proposed, the specific plan designates three sites for use as detention basins, with a total area of approximately 24.53 acres: Detention Basin 3 is approximately 12.27 acres and is located south of Planning Area 4, Detention Basin 2 is approximately 5.96 acres in size and is located east of proposed Gabbert Road south of North Hills Parkway, and Detention Basin 2B is approximately 6.30 acres and is located east of Gabbert Road north of North Hills Parkway. All three basins are designed as soft-bottom facilities, which would ultimately drain to the Ventura County Watershed Protection District (VCWPD) channel (Walnut Canyon Channel) located along the southern perimeter of the project site. It is anticipated that these basins would ultimately be operated and maintained by VCWPD.

In addition to the previously identified drainage basins, the proposed specific plan includes a 2.70-acre VCWPD easement along the southern project boundary.

Institutional Uses – Public Parkland

Approximately 6.0 net acres of public parkland is proposed in the southeast corner of the specific plan area. This designated public park land would be dedicated to the City of Moorpark and would meet the requirements of the General Plan for dedication to allow development of park uses and community service centers. While the public park is tentatively planned to include athletic fields (including softball) and an aquatic facility, the specific improvements will ultimately be determined by the negotiated Development Agreement.

Circulation System

Regional access to the project site would be provided by Los Angeles Avenue (SR-118) and Moorpark Avenue (SR-23). Los Angeles Avenue provides access east to the SR-23 and SR-118.

Components of the access plan are illustrated on **Figure 2.0-3**. All "named" streets on **Figure 2.0-3** (including A Street) would be public and all other project streets would be private. The primary access to the project site would be provided via extensions of Casey Road and High Street to the west and a connection to North Hills Parkway, a planned arterial. The proposed specific plan incorporates several roadway improvements in addition to roadways internal to each Planning Area. These roadways include (1) dedication of right-of-way and partial construction for North Hills Parkway (11.97 acres); (2) dedication of the Casey Road right-of-way (1.37 acres) and roadway construction; (3) dedication of "A" Street (4.36 acres), (4) High

Street (6.64 acres) right-of-way and roadway construction, (5) Meridian Hills Drive (3.03 acres) right-of-way and roadway construction; and (6) dedication of the Gabbert Road right-of-way (2.86 acre) and roadway construction.

As indicated in the Moorpark's General Plan Circulation Element, North Hills Parkway would ultimately be constructed as a four-lane roadway that would extend from the interchange of SR 118 and Princeton Avenue west through the central portion of the project site to Los Angeles Avenue west of Gabbert Road. The Hitch Ranch development would fully grade the roadway cross-section from Gabbert Road to the easterly property boundary of Hitch Ranch and construct the southerly two-lane barrel of the roadway improvements between Gabbert Road and "A" Street.

As proposed, Gabbert Road would be a four-lane arterial roadway constructed within a 94-foot right-of-way from the point of connection with Poindexter Avenue, crossing the Union Pacific Railroad tracks and continuing to North Hills Parkway. Northerly of North Hills Parkway Gabbert Road would taper back to existing width at the northwestern boundary of Hitch Ranch.

Meridian Hills Drive would be extended to the south from the existing terminus within the Meridian Hills community in to Hitch Ranch with a connection to Street "A" at North Hills Parkway.

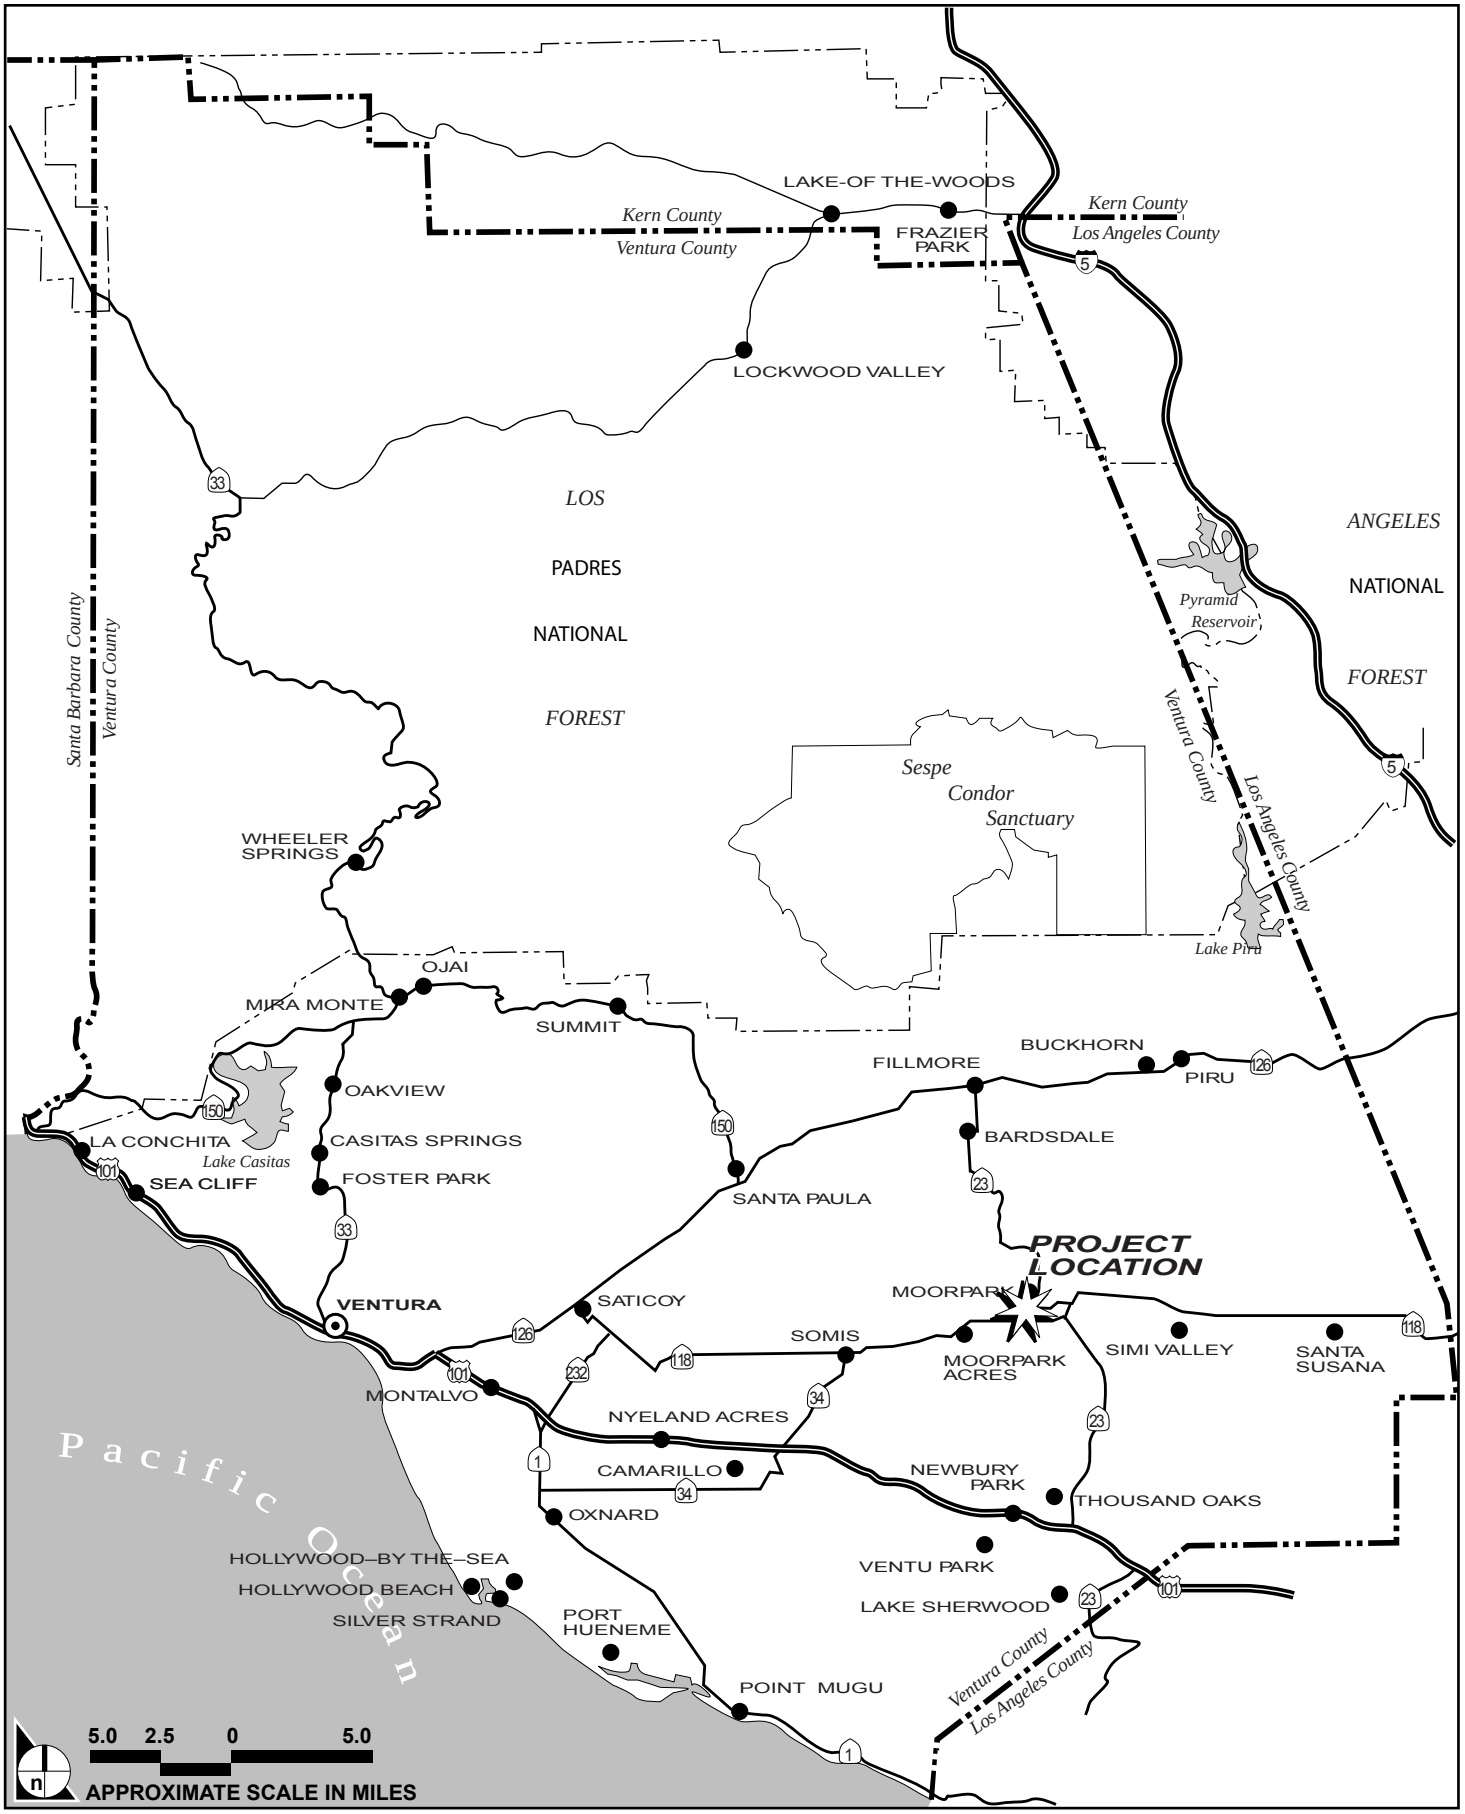
"A" Street would serve as a connector between North Hills Parkway, Poindexter Road, and the future extension of High Street. This two-lane local collector roadway would be constructed within a 50- to 70-foot right-of-way, and would provide direct site access to Planning Areas 2, 3, and 4.

High Street would be extended from its current terminus east of the project site adjacent to the U.S. Post Office along the northern side of the Union Pacific railroad tracks to Gabbert Road.

Casey Road also would be extended from its current terminus east of the project site adjacent to Walnut Canyon School to provide access to Planning Areas 2, 4, and 5, and would be widened to provide for an a right-of-way up to 76-foot in width from approximately 450 feet west of Walnut Canyon Road west through the project to Street "A".

A detailed description of the local and regional circulation systems, along with a detailed analysis of potential traffic impacts will be provided in the EIR.

Infrastructure



Natural gas and electrical service to the project site would be provided by extending existing lines, which serve existing urban uses to the west, east, and south of the site. The size and location of lines that would serve the proposed project would be determined when individual tract maps are prepared for each phase of the project. A detailed analysis of these services will be provided in the EIR.

Water service to the project site would be provided by the Ventura County Waterworks District No. 1. Domestic water service would be connected at the site boundary at Meridian Hills Drive, High Street, Poindexter Avenue and Casey Road and be pressure-looped through the project site. Currently, there are 8-inch water mainlines in Poindexter Avenue, Casey Road and Gabbert Road; these lines would be inter-connected to serve the project site. The precise configuration of the water service system for the proposed project would be determined when individual tract maps are prepared for each phase of the project. A detailed discussion of water service will be provided in the EIR.

Ventura County Waterworks District No. 1 would provide sanitary service for the project site. Two sewer lines in Gabbert Road (12 inch) and Poindexter Avenue (18 inch) would provide service for the project site. An offsite gravity sewer connection is proposed in Poindexter Avenue at Sierra Avenue. The onsite connecting sewer main would run perpendicular to and beneath the Walnut Canyon storm drain and the Union Pacific Railroad/Metro Rail tracks. No interference in rail operations is anticipated as the sewer main would be installed utilizing a bore pit and jacking method of installation. The configuration of the sewage collection system for the project will be determined at the time individual tract maps are prepared for each phase of the project. A detailed analysis of sewer service will be provided in the EIR.

Grading

Grading of the project site would involve the cut and fill approximately 2.5 million cubic yards of earth, which would be balanced on site. Maximum cut slopes would be approximately 50 feet high, and maximum fill areas would be approximately 75 feet high. Approximately 210.92 acres (78 percent) of the project site would be graded under of implementation of the proposed specific plan. Approximately 59.72 acres (22 percent) of the project site would remain undisturbed. Of the total graded area 24.53 acres would be returned to open space in the form of detention basins, ultimately providing 84.25 total acres (31 percent) of natural and detention basin open space within the specific plan area.

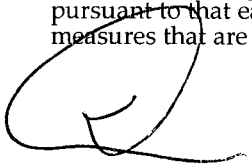
ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED:

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is a "Potentially Significant Impact" as indicated by the checklist on the following pages.

☒ Aesthetics	☐ Agriculture and Forestry Resources	☒ Air Quality
☒ Biological Resources	☒ Cultural Resources	☒ Energy
☒ Geology / Soils	☒ Greenhouse Gas Emissions	☐ Hazards & Hazardous Materials
☒ Hydrology / Water Quality	☒ Land Use / Planning	☐ Mineral Resources
☒ Noise	☒ Population / Housing	☒ Public Services
☒ Recreation	☒ Transportation	☒ Tribal Cultural Resources
☒ Utilities / Service Systems	☒ Wildfire	☒ Mandatory Findings of Significance

DETERMINATION (To be completed by the Lead Agency):

On the basis of this initial evaluation:



☐ I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.

☐ I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.

☒ I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.

☐ I find that the proposed project MAY have a "potentially significant" or "potentially significant unless mitigated" impact on the environment, but at least one effect (1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and (2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.

☐ I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

July 2, 2019

Signature Date

EVALUATION OF ENVIRONMENTAL IMPACTS:

1) A brief explanation is required for all answers except "No Impact" answers that are adequately supported by the information sources a lead agency cites in the parentheses following each question. A "No Impact" answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one involved (e.g., the project falls outside a fault rupture zone). A "No Impact" answer should be explained where it is based on project-specific factors as well as general standards (e.g., the project will not expose sensitive receptors to pollutants, based on a project-specific screening analysis).

2) All answers must take account of the whole action involved, including off-site as well as on-site, cumulative as well as project-level, indirect as well as direct, and construction as well as operational impacts.

3) Once the lead agency has determined that a particular physical impact may occur, then the checklist answers must indicate whether the impact is potentially significant, less than significant with mitigation, or less than significant. "Potentially Significant Impact" is appropriate if there is substantial evidence that an effect is significant. If there are one or more "Potentially Significant Impact" entries when the determination is made, an EIR is required.

4) "Negative Declaration: Less Than Significant With Mitigation Incorporated" applies where the incorporation of mitigation measures has reduced an effect from "Potentially Significant Impact" to a "Less than Significant Impact." The lead agency must describe the mitigation measures, and briefly explain how they reduce the effect to a less than significant level (mitigation measures from Section XVII, "Earlier Analyses," may be cross-referenced).

5) Earlier analyses may be used where, pursuant to the tiering, program EIR, or other CEQA process, an effect has been adequately analyzed in an earlier EIR or negative declaration. Section 15063(c)(3)(D). In this case, a brief discussion should identify the following:

   a) Earlier Analyses Used. Identify and state where they are available for review.

   b) Impacts Adequately Addressed. Identify which effects from the above checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards, and state whether such effects were addressed by mitigation measures based on the earlier analysis.

   c) Mitigation Measures. For effects that are "Less than Significant with Mitigation Measures Incorporated," describe the mitigation measures which were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the project.

6) Lead agencies are encouraged to incorporate into the checklist references to information sources for potential impacts (e.g., general plans, zoning ordinances). Reference to a previously prepared or outside document should, where appropriate, include a reference to the page or pages where the statement is substantiated.

7) Supporting Information Sources. A source list should be attached and other sources used or individuals contacted should be cited in the discussion.

8) This is only a suggested form, and lead agencies are free to use different formats; however, lead agencies should normally address the questions from this checklist that are relevant to a project's environmental effects in whatever format is selected.

9) The explanation of each issue should identify:

   a) the significance criteria or threshold, if any, used to evaluate each question; and

   b) the mitigation measure identified, if any, to reduce the impact to less than significant.

	Issues:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
I.	**AESTHETICS. Except as provided in Public Resources Code Section 21099, would the project:**				
a)	Have a substantial adverse effect on a scenic vista?	☒	☐	☐	☐
b)	Substantially damage scenic resources, including, but not limited to, tress, rock outcroppings, and historic buildings within a state scenic highway?	☐	☐	☒	☐
c)	In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?	☒	☐	☐	☐
d)	Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	☒	☐	☐	☐

Discussion:

a) Have a substantial adverse effect on a scenic vista?

Potentially Significant Impact. Publicly available long-range views of the Project Site are available from segments of nearby roadways including Walnut Canyon Road, Poindexter

Avenue and Gabbert Road with intermittent obstruction due to intervening topography and vegetation. Nonetheless, views of and across the Project Site would be expected to change with implementation of the Project. This issue will be analyzed further in the EIR.

b) Substantially damage scenic resources, including, but not limited to, tress, rock outcroppings, and historic buildings within a state scenic highway?

Less Than Significant Impact. There are no roadways, highways, or areas within or immediately adjacent to the specific plan site that have been designated by the City of Moorpark or Ventura County as scenic corridors or highways. According to the City of Moorpark's *Open Space, Conservation & Recreation Element*, the nearest scenic corridor is Walnut Canyon Road located approximately 500 feet to the east of the project site. No highways in the vicinity of the specific plan site are currently on the Caltrans list of officially designated state or county scenic highways. The *County of Ventura General Plan* Resources Element designates SR-118 as eligible for state scenic highway status; SR-118 is approximately 1/2–mile south the project site and is not visible due to the relatively flat topography and intervening structures.

As such, the proposed project would not substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway, as none of these resources exist on or near the project site. Impacts would be less than significant and no further analysis is required in the EIR.

c) In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings?

Potentially Significant Impact. The Hitch Ranch Specific Plan project would construct up to 755 new dwelling units on a site that is currently undeveloped. Construction would occur incrementally over a period of several years, with market conditions ultimately dictating phasing of the remaining portions of the project. Short-term impacts would fall within several categories of visual impacts. Mass grading would affect existing topography, vegetation cover, and vistas. Throughout much of the grading, large construction vehicles would be visible from adjacent (and some distant) vantage points. Barren slopes and new development in various stages of construction would be intermittently visible throughout the development of the project. This issue will be analyzed further in the EIR.

d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?

Potentially Significant Impact. Light impacts are typically associated with the use of artificial light during the evening and nighttime hours. Glare may be a daytime occurrence caused by the reflection of sunlight or artificial light from highly polished surfaces, such as window glass and reflective cladding materials, and may interfere with the safe operation of a motor vehicle on adjacent streets. Daytime glare is common in urban areas and is typically associated with mid- to high-rise buildings with exterior façades largely or entirely comprised of highly reflective glass or mirror-like materials. Nighttime glare is primarily associated with bright point-source lighting that contrasts with existing low ambient light conditions.

The Hitch Ranch Specific Plan project would construct up to 755 new dwelling units on a site that is currently undeveloped. Lighting of the proposed project would constitute a substantial new light source in the City and would alter the current character of the site. This issue will be analyzed further in the EIR.

	Issues:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
II.	**AGRICULTURE AND FORESTRY RESOURCES. In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Dept. of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board. Would the project:**				
a)	Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	☐	☐	☒	☐
b)	Conflict with existing zoning for agricultural use, or a Williamson Act contract?	☐	☐	☒	☐

c)	Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland production (as defined by Government Code section 51104(g))?	☐	☐	☐	☒
d)	Result in the loss of forest land or conversion of forest land to non-forest use?	☐	☐	☐	☒
e)	Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use?	☐	☐	☒	☐

Discussion:

a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?

Less Than Significant Impact. The City of Moorpark's General Plan designates the site as Specific Plan No.1, with Agriculture 1 Overlay. The project site would be converted to a mix of residential, open space and recreational uses.

Implementation of the proposed project would result in the loss of Farmland of Local Importance (96.4 acres) and grazing land (172.9 acres). Based on data from the California Department of Conservation 2012-2014 Land Use Conversion Report, Ventura County lost 295 acres of Farmland of Local Importance but gained 686 acres, for a net gain of 391 acres during the reporting period. Ventura County also lost approximately 69 acres of grazing

land between 2012-2014.[1] The loss of agriculture resources is limited to Farmland of Local Importance and grazing lands, and does not include Prime Farmland, Unique Farmland, or Farmland of Statewide Importance. Therefore, the loss of this resource is not considered a significant, unavoidable impact; project impacts would be less than significant, and no further analysis is required in the EIR.

b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?

Less Than Significant Impact. The California Land Conservation Act, better known as the Williamson Act, has been the state's most important agricultural land protection program since its enactment in 1965.[2] Fundamentally, the Williamson Act is a state policy administered by local governments. Local governments are not mandated to administer the act, but those that do have some latitude to tailor the program to suit local goals and objectives. The project site does not contain any lands covered by a Williamson Act contract.

The project site is currently zoned AE (Agricultural-Exclusive). The Land Use Element of the *Moorpark General Plan* designates the project site as Specific Plan Area 1. The proposed Hitch Ranch Specific Plan has been prepared to regulate development on the entire project site. The specific plan would provide the land use policies and development standards for the project site, revising the current zoning ordinance, and amending the general plan as the means of regulating the design and development of the project site. The development proposal is consistent with the allowable land use mixes and densities within the *Moorpark General Plan*'s Specific Plan Area 1. The Hitch Ranch Specific Plan applies the *City of Moorpark General Plan* as the fundamental guiding policy for project implementation and, thus, is a site-specific interpretation of the City's general plan goals. Therefore, implementation of the proposed project would not conflict with existing zoning, and impacts would be less than significant, and no further analysis is required in the EIR.

---

1 Source: California Department of Conservation, Department of Land Resource Protection, Farm Land Management Program, 2012-2014 Agricultural Land Conversion Report, http://www.conservation.ca.gov/dlrp/fmmp/Documents/fmmp/pubs/2012-2014/conversion_tables/vencon14.xls, (2012-2014 is the most recent data available), accessed March 1, 2019.

2 California Government Code Sections 51200 et seq.

c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland production (as defined by Government Code section 51104(g))?

No Impact. There are no forest lands or timberlands on the Project Site and the site is not zoned for such uses; therefore no impact would occur. No further analysis is required in the EIR.

d) Result in the loss of forest land or conversion of forest land to non-forest use?

No Impact. There are no forest lands or timberlands on the Project site, thus the proposed Project would not result in the loss of forest land or conversion of forest land to non-forest use; therefore no impact would occur. No further analysis is required in the EIR.

e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use?

Less Than Significant Impact. Under the proposed project, the project site would be converted to a mix of residential, open space and recreational uses on land that is currently identified in the General Plan as 'Specific Plan Area 1' and zoned for AE (Agricultural-Exclusive). However, for reasons previously discussed above, the proposed project would not involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use; therefore impacts would be less than significant. No further analysis is required in the EIR.

	Issues:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
III.	**AIR QUALITY. Where available, the significance criteria established by the applicable air quality management district or air pollution control district may be relied upon to make the following determinations. Would the project:**				
a)	Conflict with or obstruct implementation of the applicable air quality plan?	☒	☐	☐	☐
b)	Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is nonattainment under an applicable federal or state ambient air quality standard?	☒	☐	☐	☐
c)	Expose sensitive receptors to substantial pollutant concentrations?	☒	☐	☐	☐
d)	Result in other emissions (such as those leading to odors adversely affecting a substantial number of people?	☐	☐	☒	☐

Discussion:

a) Conflict with or obstruct implementation of the applicable air quality plan?

Potentially Significant Impact. The Ventura County Air Pollution Control District (VCAPCD) adopted the 2016 Ventura County Air Quality Management Plan (AQMP) on February 14, 2017. The 2016 AQMP presents Ventura County's strategy (including related mandated elements) to attain the 2008 federal 8-hour ozone standard by 2020, as required by the federal Clean Air Act Amendments of 1990 and applicable U.S. EPA clean air regulations.

The proposed project would generate long-term operational emissions that could potentially exceed VCAPCD regional significance thresholds. These issues will be analyzed further in the EIR.

b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is nonattainment under an applicable federal or state ambient air quality standard?

Potentially Significant Impact. Short-term air pollutant emissions would occur during site preparation and construction activities associated with the proposed project. Construction activities have the potential to generate fugitive dust, stationary-source emissions, and mobile-source emissions. Construction emissions can vary substantially from day to day, depending on the level of activity, type of machinery in use, and for fugitive dust, the prevailing weather conditions.

In addition, the proposed project would generate long-term operational emissions that could potentially exceed VCAPCD regional significance thresholds. These issues will be analyzed further in the EIR.

c) Expose sensitive receptors to substantial pollutant concentrations?

Potentially Significant Impact. An impact is significant if sensitive receptors (such as children and the elderly) are exposed to substantial pollutant concentrations such as toxic air contaminants (TACs) and CO concentrations. Sensitive receptors include residences, schools, playgrounds, childcare centers, athletic facilities, churches, long-term health care facilities, rehabilitation centers, convalescent centers, and retirement homes. The land uses located within the vicinity of the project site that are sensitive to air pollution include residential uses, schools, churches, and parks. The EIR will evaluate the potential for the construction and operation of the proposed project to exceed VCAPCD's localized significance thresholds (LSTs) in accordance with VCAPCD's guidance methodology, generate traffic that results in significant CO hotspots, or generate substantial TACs.

d) Result in other emissions (such as those leading to odors adversely affecting a substantial number of people?

Less Than Significant Impact. The VCAPCD Guidelines recommend that a proposed project include an assessment of the potential to cause a public nuisance by subjecting surrounding land uses to objectionable odors. A public nuisance is defined by VCAPCD Rule 51 (Nuisance) as:

> *such quantities of air contaminants or other material which cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public, or which endanger the comfort, repose, health, or safety of any such persons or to the public, or which cause, or have a natural tendency to cause, injury or damage to business or property.*[3]

Potential sources that may emit odors during the construction activities include equipment exhaust and architectural coatings. Odors from these sources would be localized and generally confined to the project site. Development of the proposed project would utilize typical construction techniques, and the odors would be typical of most construction sites. Additionally, the odors would be temporary, and VCAPCD regulations and complaint programs that govern nuisances would regulate any occasional odors associated with on-site uses. A less than significant impact relative to an odor nuisance would occur during construction associated with the proposed project.

Land uses that are typically associated with odor complaints include agricultural uses, wastewater treatment plants, food processing plants, chemical plants, composting, refineries, landfills, dairies, and fiberglass molding. The proposed project would not include any of these odor-producing uses; odors associated with project operation would be limited to on-site waste generation and disposal and occasional minor odors generated during food preparation activities. Furthermore, all trash receptacles would be covered and properly maintained in a manner as to minimize odors, as required by City of Moorpark and Ventura County Health Department regulations, and be emptied on a regular basis. Therefore, the implementations of the proposed project would not generate objectionable odors affecting a substantial number of people. Impacts related to odors would be less than significant, and no further analysis is required in the EIR.

---

3 Ventura County Air Pollution Control District, *Ventura County Air Quality Assessment Guidelines*, (2003) 6-10.

	Issues:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
IV.	**BIOLOGICAL RESOURCES. Would the project:**				
a)	Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?	☒	☐	☐	☐
b)	Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?	☒	☐	☐	☐
c)	Have a substantial adverse effect on federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	☒	☐	☐	☐
d)	Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	☒	☐	☐	☐

e)	Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance (e.g., oak trees or California walnut woodlands)?	☒	☐	☐	☐
f)	Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	☐	☐	☐	☒

Discussion:

a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?

Potentially Significant Impact. The project site is currently vacant, and therefore has the potential to support special status/sensitive species. Therefore, development of the project site could have a substantial adverse effect, either directly or through habitat modifications, on a species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or US Fish and Wildlife Service. This issue will be analyzed further in the EIR.

b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?

Potentially Significant Impact. The project site is currently vacant, and therefore has the potential to support a sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service. Therefore, development of the project site could have a substantial adverse effect on a sensitive natural community. This issue will be analyzed further in the EIR.

c) Have a substantial adverse effect on federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

Potentially Significant Impact. During the April 2019 field visit, a preliminary assessment of waters of the State and US was made for any on-site drainages located within the proposed project site. The goal of this field visit was to determine the locations and conditions of potential jurisdictional resources, and it did not constitute a comprehensive delineation of federal and state jurisdictional waters and streams. A more detailed delineation and impact analysis would be required for submittal to the USACE, the RWQCB, and the CDFW for review and concurrence, as part of the permitting phase, prior to commencement of the proposed project.

In the western portion of the site, mulefat thicket is supported by seasonal flows that originate off-site and infiltrate into on-site soils at the downstream terminus of sandy deposits lacking a definable bed and bank. This feature is non-linear and totals approximately 0.40 acres.

In the northeastern potion of the site, storm water flows, partially originating from the southern terminus of Meridian Hills Drive, have eroded a gully into the slopes leading to a natural drainage course with a defined bed and bank and supporting scattered emergent individuals of blue elderberry and other indicators of elevated soil moisture. This feature is approximately 560 ft. long and encompasses approximately 0.11 acres. In 2018, additional soil erosion of the gully was observed from recent rainfalls.

Because of their hydrologic isolation from navigable waters neither of these two drainage features qualifies as waters of the United States, and neither would therefore comprise USACE jurisdiction. However, the presence of hydric soils in both, and the presence of a defined bed and bank in the eastern drainage suggest the CDFW would take jurisdiction over each.

Along the southern boundary of the site, storm water flows through a rectangular channel that extends the entire length of the southern edge of the project site. Although there is no riparian habitat within this channel, it is potentially jurisdictional under CDFW regulations due to the hydrological connectivity it provides to Calleguas Creek.

These issues will be analyzed further in the EIR.

d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

Potentially Significant Impact. Wildlife movement corridors are generally defined at the regional level as habitat linkages that connect large and otherwise disjunct open space areas such as local, state, and national parks, forests, preserves, and wilderness areas. Within these habitat linkages, riparian strips, canyon bottoms, drainages, and even dirt roads and trails are used to facilitate movement. However, within a large natural habitat block or patch, these features are generally not referred to as movement corridors but, rather, travel paths to facilitate movement within the habitat patch. This issue will be analyzed further in the EIR.

e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance (e.g., oak trees or California walnut woodlands)?

Potentially Significant Impact. Mature non-native trees, which are of local special interest, are present on the site. The City of Moorpark tree ordinance (No. 101) provides for the protection of mature trees with a cross-sectional area of all major stems of 72 or more square inches, as measured at 4.5 feet above the root crown. This issue will be analyzed further in the EIR.

f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?

No Impact. There is no habitat conservation plan in place or proposed for this region. Therefore, no impacts to such a plan would occur as a result of construction and operation of the proposed project, and no further analysis is required in the EIR.

	Issues:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
V.	**CULTURAL RESOURCES. Would the project:**				
a)	Cause a substantial adverse change in the significance of a historical resource pursuant to § 15064.5?	☒	☐	☐	☐
b)	Cause a substantial adverse change in the significance of an archaeological resource pursuant to § 15064.5?	☒	☐	☐	☐
c)	Disturb any human remains, including those interred outside of formal cemeteries?	☒	☐	☐	☐

Discussion:

a) Cause a substantial adverse change in the significance of a historical resource pursuant to § 15064.5?

Potentially Significant Impact. Prior to the October 2003 fire, there were vacant farming operations on a hilltop in the center of the project site. Also present were the burned remains of a single-family residence and accessory buildings next to the western terminus of Casey Road, at the eastern site boundary. None of these structures remain on the project site as a result of the fires in 2003 and 2006. These structures were of relatively recent origin (constructed in the last 50 years) and were not of any historical significance. As a result, the proposed Specific Plan would have no direct impacts on historic resources.

However, there is one identified architectural historical resources within a 0.5-mile radius of the project site, located on the northwest corner of High Street and Moorpark Avenue. Should the results of the traffic analysis determine that High Street would need to be widened to mitigate traffic impacts, this historic resources could be impacted. This issue will be analyzed further in the EIR.

b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to § 15064.5?

Potentially Significant Impact. Given the ethnographic, prehistoric, and historic setting of the general area, there remains the possibility of archaeological resources being present on the project site. This issue will be analyzed further in the EIR.

c) Disturb any human remains, including those interred outside of formal cemeteries?

Potentially Significant Impact. Given the ethnographic, prehistoric, and historic setting of the general area, there remains a very remote the possibility of human remains, interred outside of a formal cemetery being present on the project site. This issue will be analyzed further in the EIR.

	Issues:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
VI.	**ENERGY. Would the project:**				
a)	Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	☒	☐	☐	☐
b)	Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	☒	☐	☐	☐

Discussion:

a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?

Potentially Significant Impact. The proposed project will generate an increased demand for electricity and natural gas services provided by Southern California Edison and the Southern California Gas Company. While the development of the proposed project is not anticipated to cause the wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation, this issue will be analyzed further in the EIR.

b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?

Potentially Significant Impact. The proposed project will generate an increased demand for electricity and natural gas services provided by Southern California Edison and the Southern California Gas Company. While the development of the proposed project is not anticipated to conflict with or obstruct a state or local plan for renewable energy or energy efficiency, this issue will be analyzed further in the EIR.

	Issues:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
VII.	**GEOLOGY AND SOILS. Would the project:**				
	a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury or death involving:				
	i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.	☒	☐	☐	☐
	ii) Strong seismic ground shaking?	☒	☐	☐	☐
	iii) Seismic-related ground failure, including liquefaction?	☒	☐	☐	☐
	iv) Landslides?	☒	☐	☐	☐
	b) Result in substantial soil erosion or the loss of topsoil?	☒	☐	☐	☐

c)	Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse?	☒	☐	☐	☐
d)	Be located on expansive soil, as defined in Table 18 1 B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?	☒	☐	☐	☐
e)	Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?	☐	☐	☐	☒
f)	Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	☒	☐	☐	☐

Discussion:

a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury or death involving:

i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.

ii) Strong seismic ground shaking?

iii) Seismic-related ground failure, including liquefaction?

iv) Landslides?

Potentially Significant Impact. The Specific Plan site is located in a seismically active region, and is in close proximity to several active and potentially active faults in southern California. These issues will be analyzed further in the EIR.

b) Result in substantial soil erosion or the loss of topsoil?

Potentially Significant Impact. Site grading during the construction phases of the proposed project would involve a substantial amount of earth movement. Unless preventative control measures are implemented, short-term wind and water driven erosion of soils from the project could occur. These issues will be analyzed further in the EIR.

c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse?

Potentially Significant Impact. Development on the Specific Plan site has the potential to locate structures on sites susceptible to landslide, lateral spreading, subsidence, liquefaction, or collapse. These issues will be analyzed further in the EIR.

d) Be located on expansive soil, as defined in Table 18 1 B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?

Potentially Significant Impact. Expansive materials, if left untreated, can cause damage to structures, including cracking, heaving, and buckling of foundations. Alluvial deposits at the Specific Plan site have a low to very low expansion potential. However, there may be small, localized areas of moderate to highly expansive soils. This issue will be analyzed further in the EIR.

e) Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?

No Impact. Ventura County Waterworks District No. 1 would provide sanitary service for the project site. Two sewer lines in Gabbert Road (12 inch) and Poindexter Avenue (18 inch) would provide service for the project site. The configuration of the sewage collection system for the project will be determined at the time individual tract maps are prepared for each phase of the project. As such, no septic tanks or alternative waste water systems would be

used for the proposed project and no impact would occur. No further analysis is required in the EIR.

f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

Potentially Significant Impact. Site grading during the construction phases of the proposed project would involve a substantial amount of earth movement, leading to the potential to directly or indirectly destroy a unique paleontological resource or site or unique geologic feature. This issue will be analyzed further in the EIR.

	Issues:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
VIII.	**GREENHOUSE GAS EMISSIONS. Would the project:**				
a)	Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	☒	☐	☐	☐
b)	Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	☒	☐	☐	☐

Discussion:

a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?

Potentially Significant Impact. The proposed project is expected to generate an increase in greenhouse gas (GHG) emissions associated with construction activities and normal project operational activities. To date, the VCAPCD has not adopted or recommended thresholds of significance for the evaluation of GHG impacts associated with general development projects. Instead, the VCAPCD recommends that lead agencies in Ventura County consider the draft thresholds of significance being considered by the South Coast Air Quality Management District (SCAQMD). These thresholds have been used for other projects within the City of Moorpark and elsewhere in Ventura County. The EIR will assess the proposed project's effect on GHG emissions according to these thresholds.

b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

Potentially Significant Impact. As the proposed project would emit greenhouse gases, the EIR will include further evaluation of project-related emissions and associated emission reduction strategies to determine whether the project would conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases.

	Issues:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
IX.	**HAZARDS AND HAZARDOUS MATERIALS. Would the project:**				
a)	Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	☐	☐	☒	☐
b)	Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	☒	☐	☐	☐
c)	Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	☒	☐	☐	☐
d)	Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	☒	☐	☐	☐
e)	For a project located within an airport land use plan or, where such a plan has not been adopted, within 2 miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?	☐	☐	☒	☐

f)	Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	☐	☐	☒	☐
g)	Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?	☒	☐	☐	☐

Discussion:

a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?

Less Than Significant Impact. A significant impact would occur if the proposed project would create a significant hazard though the routine transfer, use, or disposal of hazardous materials. Construction of the proposed project would involve the use of those hazardous materials that are typically necessary for construction of residential development (i.e., paints, building materials, cleaners, fuel for construction equipment, etc.). Therefore, construction of the proposed project would involve routine transport, use, and disposal of these types of hazardous materials throughout the duration of construction activities. However, the transport, use, and disposal of construction-related hazardous materials would occur in conformance with all applicable local, state, and federal regulations governing such activities. For example, the proposed project would be required to implement standard best management practices (BMPs) set forth by the City and the Los Angeles Regional Water Quality Control Board (RWQCB) which would ensure that wastes generated during the construction process are disposed of properly. Therefore, the proposed project would not create a significant impact related to routine transport, use, or disposal of hazardous materials during construction and impacts would be less than significant.

The proposed project would provide up to 755 units of residential development. During project operation, typical household chemicals such as cleaning solvents would be used in the project residences. However, these products do not pose a substantial risk to people or property and are not likely to be hazardous to the environment if correctly disposed of. Operational impacts for hazards and the use of hazardous substances by the project site would not have the potential to result in significant impacts associated with the

transportation, use, or disposal of these household chemicals. The City of Moorpark maintains a household hazardous waste program that provides for the disposal of these materials. Project impacts related to this issue would be less than significant. No further analysis is required in the EIR.

b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?

Potentially Significant Impact. As noted in the preceding section, compliance with federal, state, and local laws and regulations relating to transport, storage, disposal and sale of hazardous materials would minimize any potential for accidental release or upset of hazardous materials during project operations.

However, accidental release of hazardous materials associated with the former farming operations, such as pesticide compounds including Dichlorodiphenyltrichloroethane (DDT), its two daughter products Dichlorodiphenyldichloroethylene (DDE) and Dichlorodiphenyldichloroethane (DDD), Alpha Chlordane, and Gamma Chlordane which have contaminated site soil, could occur with mechanical and grading equipment used during construction activities. Therefore, this impact will be analyzed further in an EIR.

Further, total of 15 water wells have historically been identified on the project site. Five of the wells are known to have been destroyed; however, for the other ten the status is listed as '*Can't Locate Indeterminable*'. The Ventura County Public Works Agency (VCPWA) has stated that if any of the wells with a status of '*Can't Locate Indeterminable*' are found during grading or development of the property, the applicant must destroy the well. If the existing wells are not properly abandoned, they could act as a conduit for contamination, if present, to migrate to an aquifer. The VCPWA did not issue specific conditions for water well abandonment on the specific plan site, but provided minimum conditions for abandonment. Without proper abandonment, impacts to groundwater from potential on-site contamination would be considered significant. This impact will be analyzed further in the EIR.

c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?

Potentially Significant Impact. The nearest public schools, Walnut Canyon Elementary, and Union High School, are immediately adjacent to the east of the proposed project site. Chaparral Middle School is located directly south of the proposed project site, across Poindexter Avenue.

Accidental release of hazardous materials associated with the former farming operations, such as pesticide compounds including Dichlorodiphenyltrichloroethane (DDT), its two daughter products Dichlorodiphenyldichloroethylene (DDE) and Dichlorodiphenyldichloroethane (DDD), Alpha Chlordane, and Gamma Chlordane which have contaminated site soil, could occur with mechanical and grading equipment used during construction activities. Therefore, this impact will be analyzed further in the EIR.

d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?

Potentially Significant Impact. California Government Code Section 65962.5 requires various State agencies, including but not limited to, the Department of Toxic Substances Control (DTSC) and the SWRCB, to compile lists of hazardous waste disposal facilities, unauthorized releases from underground storage tanks, contaminated drinking water wells and solid waste facilities where there is known migration of hazardous waste and submit such information to the Secretary for Environmental Protection on at least an annual basis. A significant impact may occur if a project site is included on any of the above lists and poses an environmental hazard to surrounding sensitive uses.

This impact will be analyzed further in the EIR.

e) For a project located within an airport land use plan or, where such a plan has not been adopted, within 2 miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?

Less Than Significant Impact. The nearest airports are located approximately 11 miles to the northwest (Santa Paula Airport) or southwest (Camarillo Airport). However, there is a

private helipad located approximately 250 feet south of the southeast project boundary. Construction impacts would short-term in nature and would not significantly impact landing or takeoff operations. During the operation of the project, the nearest buildings to the helipad would be single-family residences in Planning Area 2. The heights of these buildings would be a maximum of 28 feet to the top of the roof. According to Federal Aviation Administration (FAA) regulations, a helipad would require a minimum of 280 feet for a protection zone (in the takeoff and landing area direction). The nearest building, Planning Area 2 would be 2,750 feet from the helipad. In addition, given the location of the high tension lines it is not likely that the helicopter would either take off or approach over the project site. Therefore, impacts would be less than significant. No further analysis is required in the EIR.

f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?

Less Than Significant Impact. The proposed circulation improvements to be implemented under the Hitch Ranch Specific Plan would provide additional access for potential movement of emergency equipment for locations north, east and west of the project site. The proposed circulation improvements would provide alternative east/west access via the Casey Road, High Street, and "A" Street extensions, and ultimately via the four-lane arterial proposed through the central portion of the project site once it has been constructed. The proposed project would not impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan; impacts would be less than significant and no further analysis is required in the EIR.

g) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?

Potentially Significant Impact. According to the Fire Protection Division of the Ventura County Fire Protection District, the specific plan area is a designated "high fire hazard area." A "high fire hazard area" is defined as any area or structure within 500 feet of standing brush or grass. In addition, the site is categorized as being within a Very High Fire Hazard Severity Zone (VHFHSZ) by the California Department of Forestry and Fire Protection (CAL FIRE). This impact will be analyzed further in the EIR.

	Issues:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
X.	**HYDROLOGY AND WATER QUALITY. Would the project:**				
a)	Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?	☒	☐	☐	☐
b)	Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?	☒	☐	☐	☐
c)	Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:	☒	☐	☐	☐
	i) result in substantial erosion or siltation on- or off-site;	☒	☐	☐	☐
	ii) substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite;	☒	☐	☐	☐

	iii)	create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or	☒	☐	☐	☐
	iv)	impede or redirect flood flows?	☒	☐	☐	☐
d)		In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?	☒	☐	☐	☐
e)		Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?	☒	☐	☐	☐

Discussion:

a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?

Potentially Significant Impact. The Specific Plan will substantially alter the drainage patterns on the project site. Changes in absorption rates, drainage patterns, or the rate and amount of surface water runoff may occur. This requires further study to determine whether significant impacts would occur as a result of developed site runoff. A comprehensive hydrology/drainage study will need to be prepared to determine project impacts, appropriate mitigation, and compliance with Ventura County Watershed Protection District plans affecting the area.

During the April 2019 field visit, a preliminary assessment of waters of the State and US was made for any on-site drainages located within the proposed project site. The goal of this field visit was to determine the locations and conditions of potential jurisdictional resources, and it did not constitute a comprehensive delineation of federal and state jurisdictional waters and streams. A more detailed delineation and impact analysis would be required for submittal to the USACE, the RWQCB, and the CDFW for review and concurrence, as part of

the permitting phase, prior to commencement of the proposed project. An intermittent blue-line stream was observed on the project site east of Gabbert Road. The proposed project could increase or decrease the amount of water within that stream-course, depending on the overall on-site drainage plan. The use of on-site drainage facilities could result in the diversion of runoff from entering the blue-line stream located on the project site and result in a decrease in water flow. An evaluation of pre- and post-development drainage conditions is required to determine whether runoff into the intermittent stream would occur, and whether significant impacts would result.

An evaluation of pre- and post-development hydrology and drainage system requirements will be conducted to determine whether the project could result in significant drainage impacts and whether it would expose persons or property to flood hazards. An evaluation of project impacts, as well as cumulative development impacts, on the Walnut Canyon Flood Control Channel will also be conducted. The discussion of hydrology will also include an analysis of water quality with respect to the applicability of the National Pollutant Discharge Elimination System (NPDES) permitting requirements relating to non-point discharges, as well as the policies and guidelines contained in the Ventura County Water Management Plan and the Los Angeles County Regional Water Quality Control Board Water Control Plan, Los Angeles Region, Santa Clara River, and Los Angeles River Basins. An evaluation of the project's water demand, as well as water demand associated with cumulative development, with respect to impacts on public water supplies will also be conducted. This issue will be addressed in greater detail in the EIR.

b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?

Potentially Significant Impact. The use of detention or retention basins to control runoff could result in additions to groundwater through infiltration/percolation. The project is located over the South Las Posas and East Las Posas Groundwater Basins. The supply of groundwater from these basins is managed by the Fox Canyon Groundwater Management Agency. Quality of the groundwater supply could be affected through both the percolation of water in the proposed detention basins on the project site and the percolation of site runoff downstream. The EIR will address the impact of the detention basins and downstream project site runoff on the quality of the groundwater supply. No deep

excavations are anticipated as part of the grading plan; however, the results of a geologic study that identifies depths to groundwater will be required to determine whether an aquifer could be intercepted by cuts or excavations. Groundwater supplies and the potential depletion of these resources would be assessed through the preparation of a Water Supply Assessment (WSA) pursuant to Senate Bill (SB) 610 and State CEQA Guidelines Section 15083.5. These issues will be further addressed in an EIR.

c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:

i) result in substantial erosion or siltation on- or off-site;

ii) substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite;

iii) create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or

iv) impede or redirect flood flows?

Potentially Significant Impact.

As previously discussed, the Specific Plan will substantially alter the drainage patterns on the project site. Changes in absorption rates, drainage patterns, or the rate and amount of surface water runoff may occur. This requires further study to determine whether significant impacts would occur as a result of developed site runoff. A comprehensive hydrology/drainage study will need to be prepared to determine project impacts, appropriate mitigation, and compliance with Ventura County Watershed Protection District plans affecting the area.

These issues will be further addressed in an EIR.

d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?

Potentially Significant Impact. A portion of the project site is located within the Federal Emergency Management Agency (FEMA) 100-year flood hazard area (Zone "A" of the Flood Insurance Rate Map 060712 - 0005A). Areas within the 100-year flood hazard zone occur along the south site boundary, on either side of Gabbert Road, and in the low-lying area between Gabbert Road and the nearest hillside to the east. The hydrology/drainage study will assess the impacts to these areas and recommend appropriate mitigation. The study will also analyze improvements that would remove the project site from the FEMA flood hazard area. Grading and construction may alter ground elevations or otherwise affect the course or flow of floodwaters in the FEMA-designated 100-year flood hazard zones or areas contributory to the flood hazard zone. The hydrology/drainage study will analyze those impacts and recommend appropriate mitigation. This issue will be addressed in greater detail in the EIR.

A tsunami is a series of waves generated by large earthquakes that create vertical movement on the ocean floor. Tsunamis can reach more than 50 feet in height, move inland several hundred feet, and threaten life and property. Often, the first wave of a tsunami is not the largest. Tsunamis can occur on all coastal regions of the world, but are most common along margins of the Pacific Ocean. Tsunamis can travel from one side of the Pacific to the other in a day, at a velocity of 600 miles an hour in deep water. A locally generated tsunami may reach the shore within minutes. Due to its location approximately 16 miles inland from the Pacific Ocean, the project site is not susceptible to tsunamis. Impacts would be less than significant in this regard, and no further study is required.

A seiche is a periodic oscillation of a body of water resulting from seismic shaking or other causes that can cause flooding. The project site is not located within a coastal area, and no large bodies of water are on or adjacent to the project area that would impact future projects due to a seiche. Impacts would be less than significant, and no further study is required.

e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?

Potentially Significant Impact. As previously discussed, an evaluation of pre- and post-development hydrology and drainage system requirements will include an analysis of water quality with respect to the applicability of the NPDES permitting requirements relating to non-point discharges, as well as the policies and guidelines contained in the Ventura

County Water Management Plan and the Los Angeles County Regional Water Quality Control Board Water Control Plan, Los Angeles Region, Santa Clara River, and Los Angeles River Basins. An evaluation of the project's water demand, as well as water demand associated with cumulative development, with respect to impacts on public water supplies will also be conducted. This issue will be addressed in greater detail in the EIR.

	Issues:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
XI.	**LAND USE AND PLANNING. Would the project:**				
a)	Physically divide an established community?	☐	☐	☐	☒
b)	Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	☒	☐	☐	☐

Discussion:

a) Physically divide an established community?

Less Than Significant Impact. As shown on **Figure 2**, the Hitch Ranch Specific Plan, while surrounded by other existing land uses, would not disrupt or divide the physical arrangement of an established community and impact would be less than significant. No further analysis is required in the EIR.

b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?

Potentially Significant Impact. Potential conflicts and impacts related to on-site and surrounding land uses and compatibility, and the project's consistency with adopted planning programs and their requirements will be analyzed further in the EIR.

	Issues:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
XII.	**MINERAL RESOURCES. Would the project:**				
a)	Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	☐	☐	☐	☒
b)	Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?	☐	☐	☐	☒

Discussion:

a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?

No Impact. The proposed development is not located within an area designated by the County or State as underlain by significant mineral resources.[4] The site is not designated as a mineral resource recovery site in the Ventura County General Plan, and there are no existing permitted aggregate mining facilities in the vicinity of the proposed Project. In addition, the proposed Project would not be located adjacent to a principal access road for a permitted aggregate mining site and as such, it would not have the potential to substantially restrict access to aggregate resources. Therefore, the proposed development would not result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state and there would be no impact. No further analysis in the EIR is required.

4 California Division of Mines and Geology's classification of the Ventura area into Mineral Resource Zones, website: ftp://ftp.consrv.ca.gov/pub/dmg/pubs/sr/SR_145/SR_145_Text.pdf, accessed March 1, 2019.

b) Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?

No Impact. The Conservation, Open Space, and Recreation element of the Moorpark General Plan includes policies designed to maintain the overall quality of life for Moorpark residents through rational management of natural resources and open space lands (City of Moorpark, 1986). A mineral resource overlay designation is included in the land use map of the General Plan and applies to areas outside of the City limits but within the Moorpark Area of Interest. The overlay designation indicates areas containing significant mineral resource deposits as identified by CGS. The proposed project is not located in areas of regional mineral resource significance as identified in the Moorpark General Plan and there would be no impact. No further analysis in the EIR is required.

	Issues:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
XIII.	**NOISE. Would the project result in:**				
a)	Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	☒	☐	☐	☐
b)	Generation of excessive groundborne vibration or groundborne noise levels?	☒	☐	☐	☐
c)	For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	☐	☐	☒	☐

Discussion:

a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

Potentially Significant Impact. Construction and operation of the proposed project would have the potential to increase noise levels in the vicinity of the project site due to vehicle trips that would be generated by the proposed project as well as from on-site operational activities, such as outdoor use of proposed open space and recreation areas, and stationary sources, including mechanical systems. In addition, construction activities could generate

substantial noise affecting existing residences and schools adjacent to the project site. The EIR will address the potential noise impacts associated with construction and operation of the proposed project.

b) Generation of excessive groundborne vibration or groundborne noise levels?

Potentially Significant Impact. Groundborne vibration or noise would primarily be generated during construction of the proposed project. The temporary increase in the groundborne vibration levels could impact sensitive land uses (e.g., residences and schools) adjacent to the project area. This issue will be analyzed further in the EIR and mitigation measures will be included as necessary.

c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

Less Than Significant Impact. The nearest airports are located approximately 11 miles to the northwest (Santa Paula Airport) or southwest (Camarillo Airport). However, there is a private helipad located approximately 250 feet south of the southeast project boundary. Construction impacts would short-term in nature and would not significantly impact landing or takeoff operations. During the operation of the project, the nearest buildings to the helipad would be single-family residences in Planning Area 2. The heights of these buildings would be a maximum of 28 feet to the top of the roof. According to Federal Aviation Administration (FAA) regulations, a helipad would require a minimum of 280 feet for a protection zone (in the takeoff and landing area direction). The nearest building, Planning Area 2 would be 2,750 feet from the helipad. In addition, given the location of the high tension lines it is not likely that the helicopter would either take off or approach over the project site. Therefore, impacts would be less than significant. No further analysis is required in the EIR.

	Issues:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
XIV.	**POPULATION AND HOUSING. Would the project:**				
a)	Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of road or other infrastructure)?	☒	☐	☐	☐
b)	Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	☐	☐	☐	☒

Discussion:

a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of road or other infrastructure)?

Potentially Significant Impact. In accordance with the City of Moorpark General Plan, the Land Use Element designates the site as Specific Plan No.1, Hitch Ranch, and is planned for development of a residential community. Proposed land uses include several types/intensities of residential land uses, a neighborhood park site, and flood-control facilities. Other improvements include storm drains, water mains, sanitary sewer lines, electric lines, natural gas lines, and telephone and cable lines. The specific plan would allow the development of 755 residential dwelling units, 8.07 acres of active and passive recreational facilities, a 6-acre public park, and 59.72 acres of natural open space. The proposed Specific Plan is intended to implement the existing land use policies for this site, through provisions that specify the arrangement, density, and character of permitted land uses.

A time frame for buildout of the project remains to be quantified; therefore, it is not known how this project would affect the growth rate of this area. Potential impacts relating to the population and housing increases created by the Specific Plan will be evaluated in the EIR.

b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?

No Impact. The site contains no dwelling units or residents. Consequently, the project would not displace substantial numbers of existing housing, necessitating the construction of replacement housing elsewhere, nor displace substantial numbers of people, necessitating the construction of replacement housing elsewhere. There would be no impact and further analysis is not required in the EIR.

	Issues:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
XV.	**PUBLIC SERVICES. Would the project:**				
a)	Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:	☐	☐	☐	☐
i)	Fire protection?	☒	☐	☐	☐
ii)	Police protection?	☒	☐	☐	☐
iii)	Schools?	☒	☐	☐	☐
iv)	Parks?	☒	☐	☐	☐
v)	Other public facilities?	☒	☐	☐	☐

Discussion:

a) Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:

i) Fire protection?

Potentially Significant Impact. The Ventura County Fire Protection District is responsible for providing services in the project area. Two fire stations are located in the proximity of the project area, Fire Station 42 and Fire Station 40. Fire Station 42 is located at 295 High Street, approximately 0.5 mile east of the Specific Plan area. Fires Station 42 would be the

primary response company. Fire Station 40 is located at 4185 Cedar Springs Street, approximately 2.3 miles south of the project site. Further analysis to determine sufficient fire protection staffing, response time, etc., will be addressed in the EIR.

ii) Police protection?

Potentially Significant Impact. Police protection services in the City of Moorpark are provided through contract with the Ventura County Sheriff's Department. Police services are provided out of a station located at the intersection of Spring and Flinn Streets. Further analysis to determine sufficient police protection staffing, response time, etc., will be addressed in the EIR.

iii) Schools?

Potentially Significant Impact. The Moorpark Unified School District (MUSD) provides public education services to the project vicinity. Development of the 755 units proposed as a part of the Specific Plan would introduce additional students in the MUSD. These additional students would increase the demand on school facilities. School fees are generally used to mitigate increase impacts associated with adding incremental amounts of students to school districts. Further analysis of the impact that the project will have on the public school system will be included in the EIR.

iv) Parks?

Potentially Significant Impact. The proposed project would increase the demand for parks, recreation and/or trail facilities and programs provided by the City of Moorpark. The project's demand for park land will be quantified, in accordance with the standards set forth in the City's Open Space, Conservation and Recreation Element of the General Plan, compared to the amount of public park land proposed as part of the Specific Plan plus any required Quimby fees, and evaluated to determine whether any net impacts on parks and recreation resources would result. An analysis of the proposed Trail Element, with respect to impacts on existing trail facilities, as well as an analysis of the plan's consistency with local and regional master planned trail facilities, will be prepared for the EIR.

v) Other public facilities (libraries)?

Potentially Significant Impact. A significant impact would occur if the project includes substantial employment or population growth that could generate a demand for other public facilities (such as libraries), which would exceed the capacity available to serve the project site and the project area. Within the City of Moorpark, the Moorpark City Library (MCL) provides services to residents at its facility located at 699 Moorpark Ave, approximately 0.3 miles from the project site.

Increases in population associated with the proposed project could result in the need for additional library resources or facilities. The MCL will be consulted regarding existing library resources and facilities available to serve the project site and whether implementation of the proposed project would require additional library resources and/or facilities, including new or expanded libraries. This issue will be analyzed further in the EIR.

	Issues:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
XVI.	**RECREATION. Would the project:**				
a)	Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	☒	☐	☐	☐
b)	Does the project include recreational facilities or require the construction or expansion of recreational facilities which have an adverse physical effect on the environment?	☒	☐	☐	☐

Discussion:

a) Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?

b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which have an adverse physical effect on the environment?

Potentially Significant Impact. The project's demand for park land will be quantified, in accordance with the standards set forth in the City's Open Space, Conservation and Recreation Element of the General Plan, compared to the amount of public park land proposed as part of the Specific Plan plus any required Quimby fees, and evaluated to determine whether any net impacts on parks and recreation resources would result. An analysis of the proposed Trail Element, with respect to impacts on existing trail facilities, as well as an analysis of the plan's consistency with local and regional master planned trail facilities, will be prepared for the EIR.

	Issues:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
XVII.	**Transportation. Would the project:**				
a)	Conflict with a program plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities?	☒	☐	☐	☐
b)	Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?	☒	☐	☐	☐
c)	Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	☒	☐	☐	☐
d)	Result in inadequate emergency access?	☐	☐	☒	☐

Discussion:

a) Conflict with a program plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities?

Potentially Significant Impact. A complete traffic study, including trip generation, trip distribution and intersection impact analysis associated with the land use and circulation plan will be prepared by a professional traffic engineer. This study will also include a long range analysis that utilizes the most current Citywide traffic model data to estimate the cumulative increase in traffic over the buildout time frame of this project, as well as a short range analysis, with horizon years based on the final phasing schedule, to examine phased project development in relation to roadway needs. Potential impacts will be examined in relation to the existing and planned circulation system, including an analysis of project and cumulative traffic distribution with and without the completion of the planned four-lane

arterial proposed through the central portion of the project site. The specific elements of the roadway network to be evaluated shall be determined through consultation with the City of Moorpark Director of Public Works and through review of the Ventura County Congestion Management Plan. The traffic analysis will be consistent with the requirements of the Ventura County Congestion Management Plan as well as the City of Moorpark guidelines regarding LOS standards. An analysis of the Specific Plan's impact on existing bicycle facilities, as well as an analysis of the Specific Plan's consistency with local and regional master planned bicycle facilities, will be prepared. Finally, potential increases in traffic hazards to vehicles, pedestrians, and bicyclists attributable to this project's traffic will be evaluated; this analysis will include a consideration of local school traffic, and a review of the Gabbert Road and private road crossing of the Union Pacific Railway tracks.

b) Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?

Potentially Significant Impact. Recent updates to the CEQA Guidelines suggest Vehicle Miles Traveled (VMT) as an appropriate metric for traffic analysis; some jurisdictions are including VMT in their traffic analysis in addition to LOS. The City does not currently have guidance related to VMT analysis or a VMT threshold. However, the EIR will include a qualitative analysis of potential VMT impacts.

c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

Potentially Significant Impact. As the project site is developed and homes are occupied, traffic will increase on local roadways leading to and from the project site. Traffic will be most pronounced during the AM and PM peak hours, when commuters travel to and from their job sites. During the AM peak hour, traffic going to local schools will also be present, including vehicle as well as pedestrian and bicycle traffic. An evaluation of project-related increases in traffic at local intersections and nearby school sites needs to be conducted to identify potential increases in traffic hazards to motorists, bicyclists, and pedestrians. Furthermore, project-related traffic increases along Gabbert Road, north of Poindexter A venue, will increase the potential for conflict between train movements, vehicle movements and pedestrian/bicycle movements at the existing Gabbert Road crossing of the Ventura County Transportation Commission/Union Pacific Railroad tracks. The private railroad

crossing located at the mid-point of the southern project boundary is proposed to be maintained for long-term access by utility companies. Potential traffic conflicts at the railroad crossings will be evaluated to determine if a significant increase in the risk of train/automobile/pedestrian/bicycle conflicts could result.

d) Result in inadequate emergency access?

Less Than Significant Impact. As previously discussed, the proposed circulation improvements to be implemented under the Hitch Ranch Specific Plan would provide additional access for potential movement of emergency equipment for locations north, east and west of the project site. The proposed circulation improvements would provide alternative east/west access via the Casey Road, High Street, and "A" Street extensions, and ultimately via the four-lane arterial proposed through the central portion of the project site once it has been constructed. Implementation of the proposed project would increase emergency access to the project site and nearby uses; impacts would be less than significant and no further analysis is required in the EIR.

	Issues:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
XVIII.	**TRIBAL CULTURAL RESOURCES. Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:**				
a)	Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k)?	☒	☐	☐	☐
b)	A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe?	☒	☐	☐	☐

Discussion:

a) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k)?

b) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe?

Potentially Significant Impact. Approved by Governor Jerry Brown on September 25, 2014, Assembly Bill 52 establishes a formal consultation process for California Native American Tribes to identify potential significant impacts to Tribal Cultural Resources, as defined in Public Resources Code Section 21074, as part of CEQA. Effective July 1, 2015, Assembly Bill 52 applies to projects that file a Notice of Preparation or Notice of Negative Declaration/Mitigated Negative Declaration on or after July 1, 2015. As specified in Assembly Bill 52, lead agencies must provide notice to tribes that are traditionally and culturally affiliated with the geographic area of a proposed project if the tribe has submitted a written request to be notified. The tribe must respond to the lead agency within 30 days of receipt of the notification if it wishes to engage in consultation on the project, and the lead agency must begin the consultation process within 30 days of receiving the request for consultation.

In compliance with Assembly Bill 52, the City will conduct outreach to the Coastal Band of Chumash Indians and Barbareno/Ventureno Band of Mission Indians.

Grading of the project site would involve the moving of approximately 2.5 million cubic yards of earth. Therefore, the potential exists for the project to significantly impact a site, feature, place, cultural landscape, sacred place, or object with cultural value to a California Native American Tribe. Further information regarding tribal consultation and analysis of this topic will be provided in the EIR.

	Issues:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
XIX.	**UTILITIES AND SERVICE SYSTEMS. Would the project:**				
a)	Require or result in the relocation or construction of new or expanded water, wastewater treatment, or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?	☒	☐	☐	☐
b)	Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years?	☒	☐	☐	☐
c)	Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	☒	☐	☐	☐
d)	Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?	☒	☐	☐	☐

e)	Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?	☒	☐	☐	☐

Discussion:

a) Require or result in the relocation or construction of new or expanded water, wastewater treatment, or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?

Potentially Significant Impact. Implementation of the proposed Hitch Ranch Specific Plan will require the construction of new water, wastewater treatment, storm water drainage, electric power, natural gas, or telecommunications facilities, the construction of which could cause significant environmental effects. These issues will be analyzed further in the EIR.

b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years?

Potentially Significant Impact. Implementation of the proposed Hitch Ranch Specific Plan will increase water demand in the project area. A Water Supply Assessment (WSA) pursuant to Senate Bill 610 and State CEOA Guidelines Section 15083.5 will be prepared, in consultation with the Ventura County Waterworks District No. 1 (VCWD), which distributes water to the City of Moorpark, the Calleguas Municipal Water District, which supplies imported water to the VCWD for distribution throughout the City of Moorpark, and the Fox Canyon Ground water Management Agency, which manages groundwater supplies in the area. An analysis will also be performed to determine whether significant extensions to or expansions of off-site water supply and distribution facilities would be required and whether the water demand for this project is within existing VCWD or Calleguas MWD demand projections for this area. As such, these issues will be analyzed further in the EIR.

c) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?

Potentially Significant Impact. Implementation of the proposed Hitch Ranch Specific Plan will increase wastewater generation and the need for wastewater collection and treatment facilities provided by the VCWD. The increased demand requires quantification and evaluation in consultation with the VCWD to determine whether extensions of or expansions to off-site wastewater collection and treatment facilities would be required to serve the developed project. This issue will be analyzed in the EIR.

d) Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?

Potentially Significant Impact. Implementation of the proposed Hitch Ranch Specific Plan will increase solid waste generation on an annual basis, over the life of the project. Solid wastes would also be generated during the construction phases. Given the mandate of Assembly Bill 939, which stipulates that local governments must reduce the disposal of solid wastes at landfills by estimated percentages by specified dates, the solid waste generation of this project requires quantification and evaluation with respect to Ventura County Solid Waste Management Department's Guidelines for Preparation of Environmental Assessments for Solid Waste Impacts and the City's Solid Waste Reduction Plan. This issue will be further addressed in an EIR.

e) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?

Potentially Significant Impact. A significant impact may occur if a project would generate solid waste that was not disposed of in accordance with applicable regulations. The California Integrated Waste Management Act of 1989 (AB 939) was the first recycling legislation in the country to mandate recycling diversion goals. AB 939 required all California cities, counties and approved regional solid waste management agencies responsible to enact plans and programs to reduce waste disposal. Jurisdictions were required to meet diversion goals of 50% by the year 2000 and a statewide goal of 75% by 2020.

The City is currently meeting the state-mandated diversion goal of 50% by 2000 set by the California Integrated Waste Management Act (AB 939) of 1989.[5] The proposed project would be required to comply with applicable regulations regarding solid waste disposal. The proposed project's potential impacts associated with federal, state, and local statutes and regulations related to solid waste will be analyzed in the EIR.

5 City of Moorpark, Solid Waste Division, website: https://www.moorparkca.gov/139/Solid-Waste, accessed March 14, 2019.

	Issues:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
XX.	**WILDFIRE. If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:**				
a)	Substantially impair an adopted emergency response plan or emergency evacuation plan?	☐	☐	☒	☐
b)	Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	☒	☐	☐	☐
c)	Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	☒	☐	☐	☐
d)	Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	☒	☐	☐	☐

Discussion:

a) Substantially impair an adopted emergency response plan or emergency evacuation plan?

Less Than Significant Impact. As previously discussed, the proposed circulation improvements to be implemented under the Hitch Ranch Specific Plan would provide additional access for potential movement of emergency equipment for locations north, east and west of the project site. The proposed circulation improvements would provide alternative east/west access via the Casey Road, High Street, and "A" Street extensions, and ultimately via the four-lane arterial proposed through the central portion of the project site once it has been constructed. Implementation of the proposed project would increase emergency access to the project site and nearby uses; impacts would be less than significant and no further analysis is required in the EIR.

b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?

Potentially Significant Impact. The proposed project is located on land classified as a very high fire severity zone. Further, the project site contains areas of risk due to slope, prevailing winds, and other factors, that could exacerbate wildfire risks, and expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire. These issues will be analyzed further in the EIR.

c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?

Potentially Significant Impact. The proposed project will require the installation of associated infrastructure (roads, fuel breaks, emergency water sources, power lines and other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment. These issues will be analyzed further in the EIR.

d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?

Potentially Significant Impact. The project site has rolling topography with a range of slopes. Multiple drainages currently flow through the site. Following wildfire in the vicinity, unstable soils and changes to drainage and vegetation could have the potential to mobilize and flow downhill toward Poindexter Avenue and other surrounding areas, placing nearby structures, roadways, and residents at risk. While the potential for substantial post-fire debris or mudflow is relatively low, given that the project site lies within an area of high fire hazard, this issue is a potentially significant impact and will be analyzed in the EIR.

	Issues:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
XXI.	**MANDATORY FINDINGS OF SIGNIFICANCE**				
a)	Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	☒	☐	☐	☐
b)	Does the project have impacts which are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that incremental effects of an individual project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.)	☒	☐	☐	☐
c)	Does the project have environmental effects which cause substantial adverse effects on human beings, either directly or indirectly?	☒	☐	☐	☐

Discussion:

a) Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?

Potentially Significant Impacts. Implementation of the proposed Specific Plan has the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory. These issues will be addressed in the EIR.

b) Does the project have impacts which are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that incremental effects of an individual project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.)

Potentially Significant Impacts. The potential for cumulative impacts occurs when the independent impacts of the project are combined with impacts from other development to result in impacts that are greater than the impacts of the project alone. Located within the vicinity of the project site are other current and reasonably foreseeable projects whose development, in conjunction with that of the project, may contribute to potential cumulative impacts. Impacts of the project on both an individual and cumulative basis will be addressed in the EIR for the following subject areas: aesthetics; air quality; energy; greenhouse gas emissions; hydrology and water quality; land use and planning; noise; population and housing: public services (fire protection, police protection, schools, parks, and libraries); recreation; transportation; tribal cultural resources; utilities and service systems (water, wastewater, solid waste, and energy); and wildfire.

With regard to cumulative effects on agricultural resources, biological resources, cultural resources, hazards and hazardous materials, mineral resources, and population and housing, the project would not combine with related projects or other cumulative growth to result in significant cumulative impacts. Specifically, with respect to agricultural resources and mineral resources, the project would have a less than significant or no impact to these resources, and therefore could not combine with other projects to result in cumulative impacts. With respect to biological resources, cultural resources, and geology and soils, these resource areas are generally site specific and need to be evaluated within the context of each individual project. Furthermore, related projects would be required to comply with existing regulatory requirements and the City's building permit review and approval process, which address these subjects.

c) Does the project have environmental effects which cause substantial adverse effects on human beings, either directly or indirectly?

Potentially Significant Impacts. Based on the analysis contained in this Initial Study, the project could result in potentially significant impacts with regard to the following subject areas: aesthetics; air quality; biological resources, cultural resources, energy, geology and soils; greenhouse gas emissions; hydrology and water quality; land use and planning; noise; population and housing; public services (fire protection, police protection, schools, parks, and libraries); recreation; transportation; tribal cultural resources; utilities and service systems (water, wastewater, and solid waste), and wildfire. As a result, these potential effects will be analyzed further in the EIR.

PLANNING COMMISSION MEETING

SPEAKER CARD

Fill out a speaker card for each separate agenda item you intend to address.

Please print clearly and place in the box at the end of the staff table.

Meeting Date: July 23, 2019 Agenda Item/Topic: 9.B.

Name: Dennis Hardgrave Organization: Comstock - Hitch Ranch

Address: 211 Village Commons Blvd #15 Camarillo 93012

Are you an applicant or an applicant's representative? **YES** ☒ **NO** ☐

PUBLIC COMMENTS (for items not listed on the Agenda)

Any member of the public may address the Commission on any subject within the jurisdiction of the Planning Commission, whether or not it is listed on the Agenda, during the PUBLIC COMMENTS portion of the agenda, unless it is listed on the agenda under PUBLIC HEARINGS or DISCUSSION ITEMS.

Speakers for PUBLIC COMMENT will be heard in the order the Speaker Cards are received. **Speaker Card forms must be submitted prior to the beginning of PUBLIC COMMENTS.** A limitation of ***three (3) minutes** shall be imposed upon each speaker.

PUBLIC HEARINGS

Speakers who wish to address the Planning Commission concerning an item listed under PUBLIC HEARINGS must do so during the public hearing for the item. **Speaker Card forms must be submitted prior to the beginning of PUBLIC HEARINGS**. Testimony by an Applicant will be heard first, followed by all other speakers in the order the Speaker Cards are received. Unless speaking time is limited by the Chair at the beginning of the Public Hearing due to the number of requests to speak, ***five (5) minutes** per speaker is allocated.

DISCUSSION ITEMS

Speakers who wish to address the Commission concerning an item listed under DISCUSSION ITEMS must do so during the DISCUSSION ITEMS portion of the Agenda. Speakers for DISCUSSION ITEMS will be heard in the order the Speaker Cards are received. **Speaker Card forms must be submitted prior to the first item of the DISCUSSION ITEMS portion of the Agenda**. A limitation of ***three (3) minutes** shall be imposed upon each speaker.

*Per Gov. Code Section 54954.3(b)(2), twice the allotted time will be granted to a member of the public who utilizes a translator.

City of Moorpark
799 Moorpark Avenue
Moorpark, CA 93021

RE: Hitch Ranch Specific Plan – Notice of Preparation (NOP) and Initial Study
GTS # 07-VEN-2019-00310
Vic. VEN-118/PM: 16.881
VEN-23/PM: 13.621

Dear Mr. Douglas Spondello:

Thank you for including the California Department of Transportation (Caltrans) in the environmental review process for the above referenced NOP and Initial Study. The proposed specific plan is designed for a mixed-density community that incorporates various land uses, which would help to satisfy a regional demand for housing and provide local recreational and institutional uses for new residents. The specific plan provides for the arrangement of various land uses on the 270.64-acre project site. Proposed land uses include several types/intensities of residential land uses resulting in the development of 755 dwelling units, a neighborhood park site, an institutional use, and flood-control facilities. Other improvements include storm drains, water mains, sanitary sewer lines, electric lines, natural gas lines, and telephone and cable lines. The City of Moorpark is considered the Lead Agency under the California Environmental Quality Act (CEQA).

The nearest State facilities to the proposed project are State Route 23 (SR-23) and SR-118. In the Transportation section of the proposed project's Initial Study checklist, it states that the project would have a potentially significant impact in terms of:

a. Conflicting with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities;

b. Conflicting or being inconsistent with CEQA Guidelines section 15064.3, subdivision (b); and

c. Substantially increasing hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)

The Initial Study checklist also states that the project would have a less than significant impact in terms of causing inadequate emergency access.

As stated in the Initial Study, many of the potentially significant impacts will be further discussed in the upcoming Draft Environmental Impact Report (DEIR). Caltrans looks forward to receiving the DEIR for review and to provide further comments, if warranted. From reviewing the initial study, Caltrans agrees that the project will potentially impact nearby State facilities. The following locations may need to be included in the forthcoming transportation impact study (TIS), which will be included in the DEIR:

a. All intersections along SR-118 from the SR-23 and SR-118 interchange adjacent to White Sage

Road, to Tierra Rejada Road

b. All intersections along SR-23 (also known as Moorpark Avenue and Walnut Canyon Road) from SR-118 to the northernmost proposed project access street, which is currently Meridian Hills Drive

c. The intersection of Poindexter Avenue and Gabbert Road

d. The intersection of Poindexter Avenue and Moorpark Avenue

e. The SR-23 and SR-118 interchange adjacent to White Sage Road, including the ramps, ramp influence areas (i.e. acceleration and deceleration lanes), and weaving segments within and adjacent to this interchange

f. The Princeton Avenue and SR-118 interchange, including the ramps, ramp influence areas (i.e. acceleration and deceleration lanes), and weaving segments within and adjacent to this interchange

The location/intersections to be studied should not be limited to those mentioned above. Caltrans recommends that the above locations be studied in the TIS due to their proximity to the project site.

The Tenth Edition of the Institute of Transportation Engineers' Trip Generation Manual should be used for determining trip generation forecasts and trip reductions (e.g. pass-by, diverted, and internal capture trips). Local trip generation rates are acceptable if appropriate validation is provided. Also, the latest edition of the Highway Capacity Manual (HCM) should be used for conducting operational and conflict analyses on State highway facilities. When the State highway facility has saturated flows, it is encouraged that a micro-simulation model be used for the analyses.

As a reminder, Senate Bill 743 (2013) mandates that Vehicle Miles Traveled (VMT) be used as the primary metric in identifying transportation impacts of all future development projects under CEQA, starting July 1, 2020. For information on determining transportation impacts in terms of VMT on the State Highway System, see the Technical Advisory on Evaluating Transportation Impacts in CEQA by the California Governor's Office of Planning and Research, dated December 2018: http://opr.ca.gov/docs/20190122-743_Technical_Advisory.pdf.

If the project will significantly impact State facilities, the following scenarios should be analyzed in the TIS:

a. Existing Conditions

b. Build out year without project

c. Build out year with project and other projects

d. Build out year with project

e. Future year without project (build out year without project + 20 years)

f. Future year with project and other projects (build out year with project and other projects + 20 years)

g. Future year with project (build out year with project + 20 years)

Also, if intersections on the state highway are to be modified, a complete Intersection Control Evaluation (ICE) study is required. If construction traffic is expected to cause delays on any State facilities, please submit a construction traffic management plan detailing these delays for Caltrans' review.

In addition, Caltrans agrees that no interference in rail operations on the Union Pacific Railroad/Metro Rail tracks is expected after the installation of the offsite gravity sewer connection in Poindexter Avenue at Sierra Avenue if the bore pit and jacking installation method is utilized. However, Caltrans recommends coordinating with the respective agencies early in the project development process so that any potential temporary impacts during construction can be avoided or minimized to the maximum extent practicable.

The following information is included for your consideration.

The mission of Caltrans is to provide a safe, sustainable, integrated and efficient transportation system to enhance California's economy and livability. Caltrans encourages the Lead Agency to integrate transportation and land use in a way that reduces Vehicle Miles Traveled (VMT) and Greenhouse Gas (GHG) emissions. Specifically, Caltrans suggests facilitating the provision of more proximate goods and services to shorten trip lengths, as well as achieve a high level of non-motorized travel and transit use.

Caltrans also encourages the Lead Agency to evaluate the potential of Transportation Demand Management (TDM) strategies and Intelligent Transportation System (ITS) applications to better manage the transportation network, as well as transit service and bicycle or pedestrian connectivity improvements. For additional TDM options, please refer to *Integrating Demand Management into the Transportation Planning Process: A Desk Reference* (Chapter 8) by the Federal Highway Administration (FHWA). The reference is available online at: https://ops.fhwa.dot.gov/publications/fhwahop12035/index.htm.

Caltrans also supports the implementation of complete streets and pedestrian safety measures such as road diets and other traffic calming measures. Please note the FHWA recognizes the road diet treatment as a proven safety countermeasure, and the cost of a road diet can be significantly reduced if implemented in tandem with routine street resurfacing. Additionally, the Department seeks to provide equitable mobility options for people who are economically, socially, or physically disadvantaged. Therefore, we ask the Lead Agency to evaluate the project site for access problems, as well as VMT and service needs that may need to be addressed.

As a reminder, any transportation of heavy construction equipment and/or materials which requires use of oversized-transport vehicles on State highways will need a Caltrans transportation permit. We recommend large size truck trips be limited to off-peak commute periods. Also, storm water run-off is a sensitive issue for Los Angeles and Ventura counties. Please be mindful that the project needs to be designed to discharge clean run-off water.

If you have any questions about these comments, please contact Emily Gibson, the project coordinator, at Emily.Gibson@dot.ca.gov, and refer to GTS # 07-VEN-2019-00310.

Sincerely,

FRANCES DUONG

RE: SCAG Comments on the Notice of Preparation of a Draft Environmental Impact Report for the Hitch Ranch Specific Plan [SCAG NO. IGR9956]

Dear Mr. Spondello,

Thank you for submitting the Notice of Preparation of a Draft Environmental Impact Report for the Hitch Ranch Specific Plan ("proposed project") to the Southern California Association of Governments (SCAG) for review and comment. SCAG is the authorized regional agency for Inter-Governmental Review (IGR) of programs proposed for Federal financial assistance and direct Federal development activities, pursuant to Presidential Executive Order 12372. Additionally, SCAG reviews the Environmental Impact Reports of projects of regional significance for consistency with regional plans pursuant to the California Environmental Quality Act (CEQA) and CEQA Guidelines.

SCAG is also the designated Regional Transportation Planning Agency under state law, and is responsible for preparation of the Regional Transportation Plan (RTP) including the Sustainable Communities Strategy (SCS) pursuant to Senate Bill (SB) 375. As the clearinghouse for regionally significant projects per Executive Order 12372, SCAG reviews the consistency of local plans, projects, and programs with regional plans.[1] SCAG's feedback is intended to assist local jurisdictions and project proponents to implement projects that have the potential to contribute to attainment of Regional Transportation Plan/Sustainable Community Strategies (RTP/SCS) goals and align with RTP/SCS policies.

SCAG staff has reviewed the Notice of Preparation of a Draft Environmental Impact Report for the Hitch Ranch Specific Plan in Ventura County. The proposed project includes the build-out development of 755 residential dwelling units (261 single family & 494 multi-family) and 67.79 acres of open space and recreational lots on a total site of 270.64 acres.

When available, please send environmental documentation to *SCAG's Los Angeles office in Los Angeles (900 Wilshire Boulevard, Ste. 1700, Los Angeles, California 90017) or by email to au@scag.ca.gov* providing, at a minimum, the full public comment period for review.

If you have any questions regarding the attached comments, please contact the Inter-Governmental Review (IGR) Program, attn.: Anita Au, Associate Regional Planner, at (213) 236-1874 or au@scag.ca.gov. Thank you.

Sincerely,

Ping Chang
Manager, Compliance and Performance Monitoring

[1] Lead agencies such as local jurisdictions have the sole discretion in determining a local project's consistency with the 2016 RTP/SCS for the purpose of determining consistency for CEQA. Any "consistency" finding by SCAG pursuant to the IGR process should not be construed as a determination of consistency with the 2016 RTP/SCS for CEQA.

COMMENTS ON THE NOTICE OF PREPARATION OF A DRAFT ENVIRONMENTAL IMPACT REPORT FOR THE HITCH RANCH SPECIFIC PLAN [SCAG NO. IGR9956]

CONSISTENCY WITH RTP/SCS

SCAG reviews environmental documents for regionally significant projects for their consistency with the adopted RTP/SCS. For the purpose of determining consistency with CEQA, lead agencies such as local jurisdictions have the sole discretion in determining a local project's consistency with the RTP/SCS.

2016 RTP/SCS GOALS

The SCAG Regional Council adopted the 2016 RTP/SCS in April 2016. The 2016 RTP/SCS seeks to improve mobility, promote sustainability, facilitate economic development and preserve the quality of life for the residents in the region. The long-range visioning plan balances future mobility and housing needs with goals for the environment, the regional economy, social equity and environmental justice, and public health (see http://scagrtpscs.net/Pages/FINAL2016RTPSCS.aspx). The goals included in the 2016 RTP/SCS may be pertinent to the proposed project. These goals are meant to provide guidance for considering the proposed project within the context of regional goals and policies. Among the relevant goals of the 2016 RTP/SCS are the following:

SCAG 2016 RTP/SCS GOALS	
RTP/SCS G1:	*Align the plan investments and policies with improving regional economic development and competitiveness*
RTP/SCS G2:	*Maximize mobility and accessibility for all people and goods in the region*
RTP/SCS G3:	*Ensure travel safety and reliability for all people and goods in the region*
RTP/SCS G4:	*Preserve and ensure a sustainable regional transportation system*
RTP/SCS G5:	*Maximize the productivity of our transportation system*
RTP/SCS G6:	*Protect the environment and health for our residents by improving air quality and encouraging active transportation (e.g., bicycling and walking)*
RTP/SCS G7:	*Actively encourage and create incentives for energy efficiency, where possible*
RTP/SCS G8:	*Encourage land use and growth patterns that facilitate transit and active transportation*
RTP/SCS G9:	*Maximize the security of the regional transportation system through improved system monitoring, rapid recovery planning, and coordination with other security agencies**
	**SCAG does not yet have an agreed-upon security performance measure.*

For ease of review, we encourage the use of a side-by-side comparison of SCAG goals with discussions of the consistency, non-consistency or non-applicability of the goals and supportive analysis in a table format. Suggested format is as follows:

SCAG 2016 RTP/SCS GOALS		
	Goal	Analysis
RTP/SCS G1:	*Align the plan investments and policies with improving regional economic development and competitiveness*	*Consistent: Statement as to why;* *Not-Consistent: Statement as to why;* *Or* *Not Applicable: Statement as to why;* *DEIR page number reference*
RTP/SCS G2:	*Maximize mobility and accessibility for all people and goods in the region*	*Consistent: Statement as to why;* *Not-Consistent: Statement as to why;* *Or* *Not Applicable: Statement as to why;* *DEIR page number reference*
etc.		etc.

2016 RTP/SCS STRATEGIES

To achieve the goals of the 2016 RTP/SCS, a wide range of land use and transportation strategies are included in the 2016 RTP/SCS. Technical appendances of the 2016 RTP/SCS provide additional supporting information in detail. To view the 2016 RTP/SCS, please visit: http://scagrtpscs.net/Pages/FINAL2016RTPSCS.aspx. The 2016 RTP/SCS builds upon the progress from the 2012 RTP/SCS and continues to focus on integrated, coordinated, and balanced planning for land use and transportation that the SCAG region strives toward a more sustainable region, while the region meets and exceeds in meeting all of applicable statutory requirements pertinent to the 2016 RTP/SCS. These strategies within the regional context are provided as guidance for lead agencies such as local jurisdictions when the proposed project is under consideration.

DEMOGRAPHICS AND GROWTH FORECASTS

Local input plays an important role in developing a reasonable growth forecast for the 2016 RTP/SCS. SCAG used a bottom-up local review and input process and engaged local jurisdictions in establishing the base geographic and socioeconomic projections including population, household and employment. At the time of this letter, the most recently adopted SCAG jurisdictional-level growth forecasts that were developed in accordance with the bottom-up local review and input process consist of the 2020, 2035, and 2040 population, households and employment forecasts. To view them, please visit http://www.scag.ca.gov/Documents/2016GrowthForecastByJurisdiction.pdf. The growth forecasts for the region and applicable jurisdictions are below.

	Adopted SCAG Region Wide Forecasts			Adopted City of Moorpark Forecasts		
	Year 2020	**Year 2035**	**Year 2040**	**Year 2020**	**Year 2035**	**Year 2040**
Population	19,663,000	22,091,000	22,138,800	39,000	43,000	43,000
Households	6,458,000	7,325,000	7,412,300	12,000	13,100	13,100
Employment	8,414,000	9,441,000	9,871,500	14,300	15,900	16,600

MITIGATION MEASURES

SCAG staff recommends that you review the Final Program Environmental Impact Report (Final PEIR) for the 2016 RTP/SCS for guidance, as appropriate. SCAG's Regional Council certified the Final PEIR and adopted the associated Findings of Fact and a Statement of Overriding Considerations (FOF/SOC) and Mitigation Monitoring and Reporting Program (MMRP) on April 7, 2016 (please see: http://scagrtpscs.net/Pages/FINAL2016PEIR.aspx). The Final PEIR includes a list of project-level performance standards-based mitigation measures that may be considered for adoption and implementation by lead, responsible, or trustee agencies in the region, as applicable and feasible. Project-level mitigation measures are within responsibility, authority, and/or jurisdiction of project-implementing agency or other public agency serving as lead agency under CEQA in subsequent project- and site- specific design, CEQA review, and decision-making processes, to meet the performance standards for each of the CEQA resource categories.

Notice of Preparation Comments
Hitch Ranch Specific Plan

Dear Mr. Spondello:

The Santa Monica Mountains Conservancy (Conservancy) offers the following comments on the Hitch Ranch Specific Plan proposal to construct 755 dwelling units on approximately 271 acres in the Santa Susana Mountains west of State Route 23. The Conservancy previously offered comments regarding this development project in letters dated June 26, 2006 and May 21, 2012 and hereby incorporates those documents by reference.

A project that grades 2.5 million cubic yards of earth on 211 acres of the Santa Susana Mountains utilized by a broad complement of native mammals, birds, and reptiles would result in significant adverse biological impacts. The recent feature film *Biggest Little Farm* in Moorpark showed how much wildlife can exist in mixed agricultural and open space areas. Even if every square inch of the affected 211 acres was non-native annual grassland the biological impacts to wildlife habitat would be significant. Those significant impacts can easily be reduced and brought under a level of significance by reducing the grading footprint and providing more permanent natural open space. If they are not reduced the City must adopt a statement of overriding considerations.

The property's ability to provide both habitat and resources for many of the existing wildlife species would drop precipitously if the only open space provided by the project was the proposed 29-acre lot in the northwest project corner.

The Conservancy urges the City to include multiple Draft EIR alternatives that reduce the project grading footprint by 25 and 50 acres, respectively, and add commensurate acres of permanent natural open space to the upper northwest region of the property with connectivity to other natural lands. As proposed 29 acres of functional natural open space out of a 271-acre property is a poor ratio to balance natural resources with development.

The proposed 25 acres of soft bottom debris/retention basins may have some ongoing wildlife habitat value, but if the Watershed Protection District cleans them out or fences them, those values are not enduring.

Groundwater Overdraft and Surface Water Quality

The proposed Project is located on the Moorpark anticline that divides the East Las Posas Groundwater Basin and South Las Posas Groundwater Basin both of which are part of the regional Fox Canyon Groundwater Management Agency (FCGMA). FCGMA is currently preparing Groundwater Sustainability Plans (GSPs) to address the chronic overdraft of groundwater in the agency's jurisdiction and reductions in surface water flows that impact water quality (primarily higher Total Dissolved Solids) within Arroyo Las Posas. Reduced surface water flows have an associated impact to surface water and groundwater interactions, with the potential to impact groundwater dependent ecosystems included listed species and ecosystems. In summary the DEIR must quantitatively address how this proposed project affects groundwater recharge and the surface water-groundwater interface.

The Project Description identifies Ventura County Waterworks District No. 1 (District No. 1) would provide water service to the Project. As documented on the District No. 1 website, 19-percent of all water distributed to District No. 1 customers is groundwater pumped from the Las Posas Groundwater Basin and 81-percent is imported State Water Project water.

Results of the GSP specific to the Las Posas Groundwater Basin must be included in DEIR analysis and Project related impacts related to maintaining groundwater production and surface water quality in Arroyo Las Posas.

Analysis of Extensive Detention Basin Acreage

The 271-acre project is predominantly undeveloped land which allows for the maximum storm water infiltration and groundwater recharge over a broad area. While it is encouraging that approximately 25 acres of new detention basins are being proposed as part of the project, the Project Description indicates these features are incorporated from the Ventura County Watershed Protection District's flood-control master plan related to the *Gabbert and Walnut Canyon Channels Flood Control Deficiency Study* (1997). These detention basins would then drain to the impervious Walnut Canyon Channel.

Because the City previously chose to construct concrete drainage channels—such as the Walnut Canyon Channel—to collect and transmit surface runoff as quickly as feasible into Arroyo Las Posas and the Pacific Ocean, to counter that action every opportunity to retain storm flows that would normally support riparian habitat and recharge impacted groundwater basins must be evaluated within the subject DEIR.

The DEIR must analyze alternatives that include higher capacity and/or more numerous detention basins and designate detention basin(s) that will be allowed to accrue natural debris and support native vegetation for habitat. DEIR alternatives with reduced impervious surface area would better recharge groundwater and require less basin area and basin maintenance and must be included in the DEIR.

Despite the habitat fragmentation this project proposes, "naturalized" detention basins can provide multiple benefits: slow storm water rates allowing for increased infiltration, improve water quality via soil filtration and micro-organism activity, habitat refugia amidst urbanization, reduce heat-island effects of urbanization, and provide scenic resources for passive recreation.

Natural Open Space Dedications

The Conservancy also reiterates the need for the northwest corner designated open space lots to be dedicated in fee to a conservation or parks agency, and to establish a long-term funding mechanism (such as a developer-funded long-term maintenance fund, landscape maintenance district, or community facilities district) to preserve and maintain the open space lots in perpetuity. We urge the City to require the open space dedication in fee simple to a parks district or agency such as the Mountains Recreation and Conservation Authority as a condition precedent to the Tract Map recordation.

The ecological and public value of open space dedications cannot be adequately maintained for decades without a dedicated funding source for the management entity both to prevent and remedy human disturbance. Human pressures and pet visitation on open space will only increase over time. Many homes will be adjacent to this open space. It is imperative that the conditions of approval include a permanent funding mechanism to supply a minimum of $20,000 annually with a CPI inflation adjustor to the open space management entity.

Please address any future correspondence to Paul Edelman, Deputy Director Natural Resources and Planning, at the above letterhead address, by email at edelman@smmc.ca.gov, or by phone at (310) 589-3200 ext. 128.

AIR POLLUTION CONTROL DISTRICT
Memorandum

TO: Douglas Spondello, Planning Manager, City of Moorpark

DATE: August 08, 2019

FROM: Nicole Collazo, Planning Division

SUBJECT: Request for Comments on Notice of Preparation of an Environmental Impact Report for the Hitch Ranch Specific Plan

Air Pollution Control District (APCD) staff has reviewed the Initial Study and subject Notice of Preparation (NOP) of an environmental impact report (EIR), which will identify any potential environmental impacts for the construction and operation of a mixed-density residential community that will incorporate land uses for housing, recreational, and institutional purposes. The Project Location includes approximately 270.64 acres approximately 1,600 feet west of State Route 23 and extends to approximately 1,400 feet west of Gabbert Road, within the City of Moorpark. The Lead Agency for the project is the City of Moorpark.

GENERAL COMMENTS

Air Quality Section

The air quality assessment should consider plan-consistency with the 2016 Air Quality Management Plan (AQMP). The 2016 AQMP presents Ventura County's strategy (including related mandated elements) to attain the 2008 federal 8-hour ozone standard by 2020, as required by the federal Clean Air Act Amendments of 1990 and applicable U.S. EPA clean air regulations. The 2016 AQMP uses an updated 2012 emissions inventory as baseline for forecasting data, SCAG RTP 2016 data, and CARB's EMFAC2014 emission factors for mobile sources. The AQMP can be downloaded from our website at http://www.vcapcd.org/AQMP-2016.htm. Methods for consistency with the AQMP are outlined in Chapter 4 of the Ventura County Air Quality Assessment Guidelines, 2003 (AQAG).

The AQAG can also be used to evaluate all potential air quality impacts. The AQAG is also downloadable from our website here: http://www.vcapcd.org/environmental-review.htm. Specifically, the air quality assessment should attempt to quantify and discuss reactive organic compound, nitrogen oxide emissions from operational mobile, energy, and area sources. Construction emissions will not be included in the determination thresholds, but mitigation

measures are still recommended for the reduction of fugitive dust, PM, ROG and NOx from heavy-duty construction equipment, such as using newer, cleaner diesel Tier 3 or Tier 4 off-road engines and/or using on-road construction vehicles of year 2010 model or greater. We note that the AQAG has not been updated since 2003 and serves as a reference and is not required or mandated by the APCD (AQAG Page 1-1). Current air quality determinations follow the same process but using different tools (CalEEMod vs. URBEMIS, CO Hotspots analysis no longer required due to lower concentrations, etc.). The recommended list of mitigation measures in the AQAG are also limited and outdated. For example, the following template is currently being recommended by APCD as a Commenting Agency for projects that include construction equipment, reflecting state laws adopted since the AQAG was last updated in 2003:

The project applicant shall ensure compliance with the following State Laws and APCD requirements:

I. Construction equipment shall not have visible emissions greater than 20% opacity, as required by APCD Rule 50, Opacity.

II. All portable diesel-powered equipment over 50 BHP shall be registered with the State's Portable Equipment Registration Program (PERP) or an APCD Portable Permit.

III. Off-Road Heavy-Duty trucks shall comply with the California State Regulation for In-Use Off-Road Diesel Vehicles (Title 13, CCR §2449), the purpose of which is to reduce NO_x and diesel particulate matter exhaust emissions.

IV. On-Road Heavy-Duty trucks shall comply with the California State Regulation for In-Use On-Road Diesel Vehicles (Title 13, CCR §2025), the purpose of which is to reduce NO_x and diesel particulate matter exhaust emissions.

V. All commercial on-road and off-road diesel vehicles are subject to the idling limits of Title 13, CCR §2485, §2449(d)(3), respectively. Construction equipment shall not idle for more than five (5) consecutive minutes. The idling limit does not apply to: (1) idling when queuing; (2) idling to verify that the vehicle is in safe operating condition; (3) idling for testing, servicing, repairing or diagnostic purposes; (4) idling necessary to accomplish work for which the vehicle was designed (such as operating a crane); (5) idling required to bring the machine system to operating temperature, and (6) idling necessary to ensure safe operation of the vehicle. It is the Permittee's responsibility to have a written idling policy that is made available to operators of the vehicles and equipment and informs them that idling is limited to 5 consecutive minutes or less, except as exempted in subsection a. above.

The following are recommended measures for construction equipment and vehicles:

I. Diesel powered equipment should be replaced by electric equipment whenever feasible.

II. Maintain equipment engines in good condition and in proper tune as per manufacturer's specifications.

III. Lengthen the construction period during smog season (May through October), to minimize the number of vehicles and equipment operating at the same time.

IV. Use alternatively fueled construction equipment, such as compressed natural gas (CNG), liquefied natural gas (LNG), or electric, if feasible.

Lastly, VCAPCD will review the EIR's air quality impact section for the following criteria:

- Conflict with or obstruct implementation of the applicable air quality management plan.
- Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standards.
- Expose the public (especially schools, day care centers, hospitals, retirement homes, convalescence facilities, and residences) to substantial pollutant concentrations.
- Result in other emissions (such as those leading to odors) affecting a substantial number of people.

The EIR should also address the potential impact of the project being sited adjacent to a railroad and within 1500 ft of a major roadway (118) and possible exposure to toxic contaminants from either source of emissions and what measures will be taken to reduce toxic exposure from mobile emissions surrounding the project. Some measures can include placing the air intake locations further away from mobile emission sources, proofing the windows nearest the freeway, and/or installing a vegetative barrier between the source of pollutants and the project's inhabitants.

A note about the CO analysis mentioned in the Initial Study. Some localized areas, such as traffic-congested intersections, can have elevated levels of CO concentrations (CO hotspots). CO hotspots are defined as locations where ambient CO concentrations exceed the State Ambient Air Quality Standards (20 ppm for 1-hr standard, 9 ppm for 8-hr standard). The Federal Ambient Air Quality Standard for CO is 35 ppm for 1-hr standard and 9 ppm for the 8-hr standard. In Ventura County, ambient air monitoring for CO stopped in 2004, with the approval of the U.S. Environmental Protection Agency- Region 9, because CO background concentrations in El Rio, Simi Valley, and Ojai were much lower than the State Ambient Air Quality Standard (highest recorded CO background concentration in Ventura County was in Simi Valley at 6.2 ppm for 1-hr, 1.6 ppm for 8-hr (*AQAG, Table 6-2*). Therefore, no CO hotspots are expected to occur anywhere in Venture County and additional CO modeling analysis with the LOS comparison is not warranted. In addition, with over 80% of the CO in urban areas emitted by motor vehicles, and with stricter, cleaner emission standards to the mobile fleet, CO ambient concentrations should remain at or lower than the most recent CO monitoring data available for Ventura County.

Greenhouse Gas Emissions Section

Neither APCD nor the County has adopted a threshold of significance applicable to Greenhouse Gas (GHG) emissions from projects subject to the County's discretionary land use permitting authority. APCD published a report as a request by the Ventura County Air Pollution Control Board to report back on possible GHG thresholds options on November 8, 2011, including using the recommended threshold of 10,000 MT/yr CO2e for stationary/industrial sources. The District will be looking into what GHG threshold is best suitable for Ventura County in the near future which will undergo a public review process.

The following are recommended guidance documents that could be used to address the impacts of climate change and greenhouse gases in Ventura County as a result of the proposed project. Alternatively, if your city has an adopted Climate Action Plan or similar plan, you may refer to it for a qualitative analysis, pursuant to CEQA Guidelines Section 15064.4.

On November 2017, the California Air Resources Board published it latest Climate Change Scoping Plan. The Scoping Plan lays out a strategy for achieving California's 2030 Greenhouse Gas target (SB 32 and EO B-30-15) and builds on the state's successes to date, proposing to strengthen major programs that have been a hallmark of success, while further integrating efforts to reduce both GHGs and air pollution. California's climate efforts will 1) Lower GHG emissions on a trajectory to avoid the worst impacts of climate change; 2) Support a clean energy economy which provides more opportunities for all Californians; 3) Provide a more equitable future with good jobs and less pollution for all communities; 4) Improve the health of all Californians by reducing air and water pollution and making it easier to bike and walk; and 5) Make California an even better place to live, work, and play by improving our natural and working lands. The 2017 Climate Change Scoping Plan can be accessed here https://www.arb.ca.gov/cc/scopingplan/scoping_plan_2017.pdf.

On December 2018, the Governor's Office of Planning and Research (OPR) published a Draft Technical Advisory. This document incorporates developments since the June 2008 Technical Advisory publication, including regulatory changes made to the regulations that implement CEQA (commonly known as the "CEQA Guidelines" in late 2018 by the California Natural Resources Agency (Agency). Although this document largely focuses on project-level analyses of greenhouse gas impacts, Section IV briefly addresses community-scale greenhouse gas reduction plans as one pathway to streamline CEQA analyses. This discussion draft is intended to address some common issues and topics that arise in greenhouse gas emissions analyses under CEQA but is not intended to address every single issue and topic. More information on the OPR's Technical Advisory can be found here http://opr.ca.gov/ceqa/technical-advisories.html.

GHG operational and construction emissions can also be quantified and assessed using the air quality model CalEEMod using the annual reports function to estimate GHG emissions in MT/Yr CO2e.

Thank you for the opportunity to comment on the Initial Study and NOP. If you have any questions, please call me at 645-1426 or email me at nicole@vcapcd.org.

PUBLIC VENTURA COUNTY WORKS

WATERSHED PROTECTION
WATERSHED PLANNING AND PERMITS DIVISION
800 South Victoria Avenue, Ventura, California 93009
Sergio Vargas, Deputy Director – (805) 650-4077

MEMORANDUM

DATE: August 9, 2019

TO: Douglas Spondello, Planning Manager
City of Moorpark

FROM: Sergio Vargas, Deputy Director SV.

SUBJECT: Hitch Ranch Specific Plan No 2019-01
APN(s) 511002011, 13, 16, 17, 17, 18, 19 and 511020022
Zone 3
Watershed Protection Project Number: WC2019-0053

Pursuant to your request dated July 10, 2019, this office has reviewed the submitted materials and provides the following comments.

PROJECT LOCATION:

North of Poindexter Avenue, and west of Moorpark Avenue (State Route 23), Moorpark, CA

PROJECT DESCRIPTION:

The proposed Hitch Ranch Specific Plan is designed as a mixed-density residential community that incorporates land uses for housing, recreational and institutional purposes.

WATERSHED PROTECTION DISTRICT COMMENTS:

1. The proposed development would be served by Gabbert Channel and Walnut Canyon Channel, which are aging concrete flood protection facilities in need of rehabilitation. The Draft EIR should consider potential impacts to existing infrastructure and evaluate funding mechanisms to determine and collect the pro-rata share of the needed capital improvements that would benefit the proposed development.

2. Initial Study (Page 9). The Initial Study indicates that it is anticipated that the three proposed basins would ultimately be operated and maintained by the Ventura County Watershed Protection District (District). The District is not accepting new privately-constructed debris basins. The District will not be operating or maintaining the three proposed basins. Regardless who will conduct the maintenance, the Draft EIR should describe and analyze the long-term

maintenance of the proposed facilities, including potential impacts associated with maintenance activities and provide best management practices to minimize these impacts.

3. Initial Study (Page 9). The Initial Study indicates that the proposed Specific Plan includes a 2.70 acre VCWPD easement along the southern project boundary. The District currently holds a right-of-way to maintain the Walnut Canyon Channel. The project proponent shall coordinate with the District to ensure continued access to the facility.

4. Initial Study (Page 10). The proposed Specific Plan indicates that High Street would be extended along the southern project boundary. The new roadway would be immediately adjacent to the existing Walnut Canyon Channel. The Specific Land Use Plan (Figure 3 of the Initial Study) is conceptual and does not indicate the location of the facility. The District requests an evaluation of the roadway, including construction and use of the roadway on the facility. In particular, the District is concerned with compaction of the soils leading to potential facility failure (i.e., wall collapse). Furthermore, the Draft EIR should describe where high street would be sited in relation to the facility (i.e. setback from the channel). The Draft EIR should address this concern along with all concerns described in the *Gabbert and Walnut Canyon Channels Flood Control Deficiency Study*, as referenced on page 8 of the Initial Study.

5. Initial Study (Page 11). The Initial Study indicates that bore pit and jacking would be used to install a sewer main beneath the Walnut Canyon Channel, which is a District facility with associated rights of way. The Draft EIR should provide analyses or mitigation of potential impacts to the District facility and right of way. Please provide site plans and cross sections for all proposed activities impacting District facilities, jurisdictional watercourses, and/or rights of way. All project components that would affect the District's facility and rights of way are subject to District approval.

   Construction of a sewer line below this facility must avoid impacts to the facility. The District requests potential vibration-related impacts to District facilities resulting from bore and jacking vibration (e.g., liquefaction) be addressed in the Draft EIR.

6. An encroachment permit and annual utility use fees would be required if the project is approved and constructed. Please reference Ordinance WP-2 and the Resolution Establishing Policy for Permitting Underground Facilities in District Property, adopted by the Board of Supervisors on September 18, 1990. Crossing underneath Walnut Canyon Channel would require an encroachment permit from the District. In addition, any alignment that proposes the use of District property will be subject to District Resolution for permitting underground facilities establishing underground facility use fees.

7. Please include a section in the Draft EIR discussing the concept of integrated flood control including public safety.

8. Please address the required detention volumes in the Draft EIR.

9. There is a major landslide area in the project vicinity. It is located west of Walnut Canyon, on the slopes just beyond Grimes Canyon Road. In general, a specific strategy and plan to address this hazard should be addressed in the Draft EIR. The District is interested in reducing or eliminating the risk of debris flow (due to potential landslides) into the flood control channels. Please address mitigation measures that will be undertaken to reduce or eliminate this hazard risk.

10. Development proposed through the Hitch Ranch Specific Plan could substantially increase and significantly alter the existing site topography and drainage patterns. Please evaluate the risk of debris and mud flows that may be entering into the flood control system, their impact on channel capacity, and mitigation measures.

Kipp Landis, Commissioner

Comments to the proposed EIR for Comstock Homes Hitch Ranch Specific Plan

Planning Commission:

I regret that I will not be present for tonight's meeting but would like to submit my comments. I know that many of my comments will be brought up by the Planning Commission itself and by those attending tonight meeting.

This project has a history going back to at least 1993 when discussions started with AB properties, Southern California Edison and the current applicant/owner Hitch Ranch, Milligan et. al. At that time some plans were terminated but Hitch Ranch prevailed.

I, personally, am not either in favor or not in favor of this specific plan but do have some concerns. The introduction of the notice of public scoping twice mentions that the location is located "in the rolling hills north of Poindexter...." After construction, this statement will most likely be false after 755 homes are built. At 3 inhabitants per household, (my estimate) this will add 2,200+ to the population of Moorpark. (This includes the Casey Project.)

As yet there are no sight plans presented. Will the developer be able to complete this project so no homes will be in view along Poindexter? Keeping the "Rolling Hills" intact?

As with any project (based on past experience) the developer will come back to the City to ask for even higher density. Be aware of this.

It is mentioned that part of the Institutional Uses – Public Parkland, there is a suggestion of an aquatic facility. If so, who pays to build it, how large will it be, will it be for the whole community, and who will bear future maintenance costs.

The developer is interested in only his plan. One of the obvious questions is traffic flow on High Street at the intersection of Moorpark Avenue. At this time, there are no plans by the developer to alleviate this traffic increase. This also applies to the intersection of Poindexter and Moorpark Avenue. Both the intersections are one-lane each way and could not bear the increase of traffic of this project. Mentioned in the proposal is also the problem of having landmarked buildings at the intersection of High and Moorpark Avenue. The developer should address this.

Is this project compatible with SOAR?

Have there been agreements between Meridian Hills to continue Meridian Hills Drive in to the Hitch development? It is not shown on the Specific Land Use Plan, figure #3.

There is no mention of an Archaeological investigation as it is dismissed as not being the type of land with possible Indian activity. Archaeological investigations on similar property around Moorpark College did produce Indian Archaeological remains. This property is only 3-4 miles away. This might be covered under "Tribal Cultural Resources". (There is and old "sweat lodge" near Gabbert that might still be in existence.)

Currently, much of the property is used by cows from a nearby ranch for grazing. Doesn't that affect "Agricultural and Forestry Resources"?

In other developments nearby there are provisions for equestrian and walking trails. Not in this proposal. Why not?

When looking at the middle of PA-2, I question the ability for emergency vehicles to reach some of the homes quickly and efficiently as the roads have minimal entry/exit points in that area.

Thank you for reviewing these comments.

Thomas Duck
Moorpark

ar Douglass Spondello,

his letter is written in regards to the Hitch Ranch Specific Plan. I do not think that it is ıecessary to disrupt the natural beauty of our ecosystem and environment for the sake of the interests of a development company. We, the people of Moorpark, I believe, ought not to let a development company come in and decide our relationship with our ecosystem for us. We, I also believe, have every right to enjoy the natural beauty of the open, unaltered space around us. I think that we, the people, are best served when this space is unaltered. It is not necessary to use this space for land development. Growth is not necessary. In fact, unchecked growth is unsustainable. The only circumstances under which this project should be considered should be such that it will have a net negative carbon impact. That is to say that it will reduce carbon dioxide and other pollutants from the environment. I believe that this is possible by outfitting every new structure with enough solar panels to fulfill the needs of the proposed project and more. Furthermore, we ought to mitigate our reliance on natural gas by mandating that all appliances in these new structures be electric and that there be no natural gas on site. With this, I am referring to stoves, ovens, water heaters, dryers, air conditioning, etc. all being electric and powered by the solar panels on site. It is the year 2019, and it is time that Southern California and Moorpark start acting like it. If the development company cannot provide the proposed project with the modern day technology necessary for a sustainable future, then it has no business disrupting the scenic and vital ecosystem of the beautiful city of Moorpark. I hope that with being a resident of this city my entire life, my point of view and these crucial considerations be taken into account. If you have any questions or concerns, or if you wish to speak with me further, please feel free to contact me at any time.

Regards,
Juan Gramajo

Subject: Residential development in Moorpark (Comstock Homes)

Hello,

I'm a resident of Moorpark and have been for 25 years. I do not believe that we should be building more housing without analyzing the effects it will have on the city's current traffic situation. The city has some serious road infrastructure problems, especially with LA Avenue traffic, that has been getting worse every year. We can not afford more traffic. I am worried about empty storefronts along LA Avenue (like many other residents, we will not head down that way during certain times of the day because of dangerous truck traffic). I also have serious safety concerns regarding heavy road traffic in an emergency. If we have a major fire in the hills which road will people take to evacuate?

The city, county, and state have not considered the long term effects additional housing will have on current residents. They should have built a freeway around the city. This could have accommodated the increased traffic. Instead we have been forced to endure truck traffic and congestion along LA Avenue, because the city has no control over the road and no proper growth planning. I just can't see any way that Moorpark can accommodate more cars without it affecting its current residents' quality of life. Every year traffic gets heavier. Even without additional housing, traffic will continue to get worse as thousands of truckers and commuters use LA Avenue every day.

We should not okay this new Comstock Home development for these reasons. Just because there is vacant land doesn't mean the city can afford the additional units. We have to have a city plan to accommodate the hundreds of more cars we will see on our main roads.

Also, we need to renegotiate our low income housing allotment with the county. Our city can't absorb 1164 houses. If you look at our neighboring cities and their allotments, I can't understand why we got such a bad deal. Our small town has almost the same amount as Simi Valley, and T.O. has less than 200 houses. Makes no sense!

We really need to look hard at the long term affects of continuing to build when we don't have the infrastructure to support the growth.

We must have a plan for growth BEFORE we build. The county and our city both have done minimal to solve the traffic congestion problem on LA Ave. We need a plan to build more roads into and out of the city with a path to get people on freeway. We should also include our neighboring cities, like Fillmore, in that growth plan, since they use our roads to commute to and from work every day.

I'm not a city planner. Maybe we don't have the room or the means necessary to build these additional roadways. If we don't, then don't build.

Stephanie Maio

Re: Proposed Hitch Ranch Specific Plan

My husband, Ron, and I purchased our 40.5 acre parcel of land in late 1977 from the estate of the Schwindt family who had owned over 700 acres that included an operational dairy farm, Golden Top Dairy. We realized the zoning on this acreage was to be a minimum of one residence per five acres. That was why we purchased the parcel (an assurance that we would not be impacted by higher density development) and why we accepted the costs associated with living in such an area. I was appointed as a member of the Moorpark Architectual Review Board by Supervisor Dougherty while Moorpark remained in unincorporated Ventura County and became a member of the committee to promote the incorporation of Moorpark, always believing local representation was the best option. After incorporation, I was honored to serve on the city's first planning committee. While working as part of the incorporation committee, I received a lot of feedback. Everyone in our community living in Gabbert Canyon voiced concerns about cityhood bringing more development that could encroach on our rural neighborhood and threaten our way of life. I hope those concerns will not be justified.

Eventually, a large part of the Golden Top Dairy farm underwent a zone change and was developed by Toll Brothers into the expensive homes that abut the golf course. Since then, despite community protest and concerns, additional acreage around us has been rezoned into smaller rural residential parcels, such as one-half acre residential lots. Ron and I realize that we bought forty-two years of a rural life style when we purchased here but are very concerned about what might occur as a result of the proposed density changes to the Hitch Ranch project.

Please address the following concerns that my husband and I share on the proposed changes to the area of Moorpark, referred to as Hitch Ranch:
1. Higher density housing near Gabbert Canyon can have a detrimental effect on our lifestyle. There is a legal precedent referred to as "Coming to the Nuisance" that could be used by those moving into a more highly developed adjacent area that could easily bring loss of use and also financial loss to those of us who prefer to include livestock and other farm animals in our lives. Many people do not like the accompanying noises and smells that can be associated with animal husbandry. Legal remedies often include ending current allowed zoning uses, reducing animal density units per parcel, or imposing financial penalties payable to plaintiffs in civil suits, or all of these.
2. Most of us, in this area, enjoy wildlife sightings and value a world where species diversity keeps this planet in a safer state. We are concerned on the continued loss of wildlife habitat and wildlife corridors that occurs every time a new development is approved in the open areas remaining. There are also many current studies that point to problems associated with increased lighting in the night sky and its effects on wildlife. My husband and I love the fact that the unused portion of our large parcel can afford

much needed habitat to a myriad of wild animals. We have seen the paw prints of mountain lions near our home and a neighbor across the arroyo, in one of the golf course homes, called us to let us know a lion was seen coming across our pasture where our horses were located. We have seen many coyotes, the closest being 15 feet away. We have not ever had a problem with their attacking any of our animals. We did, however, lose 10 of our goats to attacking domestic dogs. There are owls hooting above us at night and there are the keening cries of red-tailed hawks soaring over our hillsides. In addition, many turkey vultures use this area in their migration patterns each year. We often get 30-40 using our property to scope out the food supply and rest up on their journey. Their heralding, as they sit on fences, is wonderful to view. The quail, songbirds, and numerous hummingbirds all thrive in the area. There are wild bee hives located on our property (European, not Afrcianized) and these bees, threated everywhere by pesticides, are free to live out their lives safely. We have snakes of several varieties, many other types of reptiles, some amphibians, foxes, skunks, and many species of rodents. I understand there are also deer and bears but I have never been fortunate enough to see any here.

3. We have major concerns that the proposed housing density will impact an already burdened water delivery system and prevent us from using our current system. While we do not obtain our water from a well, we do have to pump water up the hill to holding tanks for domestic and agricultural use on our property. The head pressure at our water meter is sometimes, on rare occasions, not adequate enough to allow the water to reach where our water pump is located. This was especially true during the recent drought years during hot summer months.

4. Circulation issues already abound in our area. At certain times of the day, traffic streaming down Poindexter to and from Moorpark Avenue is akin to deadlocked freeways during rush hour. Turning left or right at Moorpark Avenue from Poindexter during these busy times of day can take many light changes. I cannot even envision what the proposed number of residences would effect if this project is approved as is. Every Moorpark resident is also aware of bad travel times on Los Angeles. While we cannot deter truck traffic on a State route, we can mitigate what we do to add to the problems.

5. Part of CEQA addresses aesthetics. Most of us enjoy driving, bicycling, or walking by the beautiful green hills that nestle above the railroad tracks. Obviously, those hills seen if this development builds out as described would have no resemblance to the ones there now.

6. Development, with its accompanying use of energy sources within the home and the need for transportation, usually involving motor vehicles, will impact our air quality and our need to reduce greenhouse gas emissions to combat climate change. What alternatives are being offered to reduce reliance on automobiles?

7. Wildfires are obviously here to stay in the lives of those of us who live in California. We now no longer have wildfire seasons but a yearlong threat every time the temperature rises, the humidity decreases, the Santa Anas blow, or, all of these factors coalesce into one. Having lost our home in the 2003 wildfires and having almost lost our new home in the 2006 wildfire, two weeks after we took occupancy, we are very sensitive to the threat of increased wildfire danger. While it might appear that more houses reduce native fuel levels, there are also increased risks with a larger population

living near an area such as ours. We often become the ex-facto "parkland" for those who view Gabbert as a great place to run with their dogs, walk with their family, or go to see the horses, cows, and goats not found in their developed areas. Increased foot traffic, and to some degree, increased car traffic and side of the road parking, increases our fire risk and also increases threats to our personal property security as well as our privacy.

8. How to best use the land within our control is an age-old issue. SOAR encourages building within incorporated areas to help save agricultural and open space areas. This doesn't mean that we should build and pave over every available parcel of undeveloped land within the city boundaries. If we view every open parcel as a place to add more housing and if we view increasing density as a price to pay in order to secure "low income acreage" for those people badly needing it, we eventually will have zoned the Gabbert Canyon way of life out of existence. We would really hate to see that happen as there are many people who view this way of life as quite worth saving.

Mr. Spondello, thank you for reading through all of this. I appreciate your time. Please feel free to contact me if you would like further clarification or input.

Sincerely,

Doris E. Miller

Subject: Hitch Ranch EIR Scoping

Planning Manager Mr. Spondello,

Welcome to the small town of Moorpark.

The land involved in this EIR scoping (referred to as Hitch Ranch) is nestled in rolling hills. Moorpark takes it's name from travelers on the train that viewed those very hills and claimed that the hills were reminiscent of the Moors of Scotland. To flatten them for this development destroys a scenic view and a piece of Moorpark's history. The land is agricultural by zoning and is still providing grazing for cattle. Aside from the cattle there is an abundance of wildlife: roadrunners, bobcats, weasels, quail, and these are just few of the uncommon species making their habitats there. Then there is the issue of wildfires. Historically they have traveled straight through that area, from the NE to the SW. There is no circulation plan that allows for a safe exit. Gabbert Road will bottleneck, as it is one way in and out, and may even get cut off by the train. L.A. Ave. at Gabbert Road is slow on a good day. Not a good plan and even a deadly one. Also the light and noise produced by this project will interfere with quiet ranching neighborhood on Gabbert Road.

Those are just a few of the issues I have concerning Hitch Ranch, the rest will have to wait.

Sincerely,
Sharon Noel

Subject: Comstock Homes-Hitch Ranch Development

Dear Mayor, City Council Members and Planning Manager,

My name is Kathleen Stacey and I have lived in Moorpark since 1994 with my husband and 5 children. For the past 18 years we have lived just south of and across the street from the Hitch Ranch property, next to Poindexter Park. We love our home and the small town feel of Moorpark, it reminds me of how Simi Valley used to be when I moved their as a little girl in 1965!
Some things have changed since we moved to Moorpark 25 years ago, but one thing that hasn't changed is the terrible traffic issues. Poindexter Ave backs up every weekday morning and gets gridlocked and is made even worse by the trains that pass through with commuters. Walnut Canyon Road with the gravel trucks and elementary school traffic are very heavily traveled. Gabbert Road, Tierra Rejada, and Los Angeles Ave are dangerous and congested with truck and high school traffic. I realize that we have two state highways that run through our city and they present traffic issues of their own that contribute to the danger and frustration of trying to move about the city.

I am opposed to the development of the Hitch Ranch property changing it from agricultural to very high density residential, grading down all of the hills that we love and adding in excess of 1500 more cars to the already heavily impacted roads of downtown Moorpark.
I have faith that the environmental impact report will reveal the negative issues that this project will present and I trust that you all will consider the impact that they will have on our city and the residents, and vote accordingly.

Thank you in advance for your careful and thoughtful consideration of this project.
Sincerely,

Kathleen Stacey

Regarding: EIR Hitch Ranch Specific Plan No. 2019-01

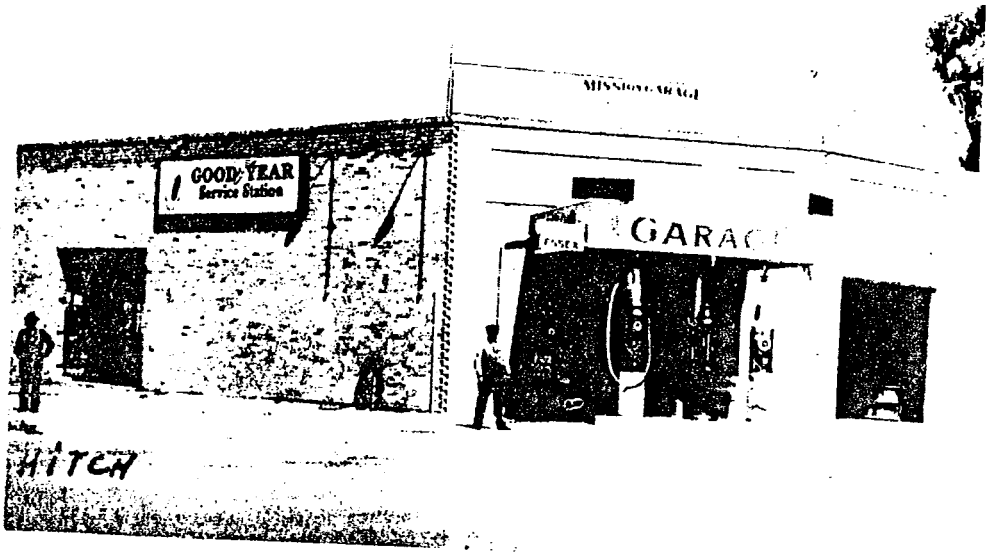
Dear Mr. Spondello

I am writing this letter in regards to the EIR study mentioned above. Our names are Colin & Victoria Velazquez, we are the owners of the property located at 601 Moorpark Ave., Moorpark, Ca.

We would like to take this opportunity to let you know about the main corner in the old downtown area known as the Tan Corner. This corner is a Historical Site in Moorpark and is the only one remaining from the very early 1900 ‘s.

Enclosed you will find some copies of information for you to consider in your EIR study. I have also enclosed several pictures of the corner from 1902.

Below I have included my address and phone number. If you have any questions please don’t hesitate to call me .



Thank you for your attention to this matter.

Sincerely,

Colin Velazquez

Tentative Rulings

Tentative Ruling for **SC 037584**

Hearing Date: **2005-03-29**
Ruling:

The Court will grant the Petition for Writ of Mandate. The Court concludes that there is substantial evidence in the record supporting a fair argument that the project as described, amending the Circulation Element of the Moorpark General Plan to show an extension of High Street from Moorpark Avenue to Gabbert Road, may have a significant effect on the environment.

Moreover, the Court concludes that the "whole of the action in this case" requires consideration c the proposed extension of High Street with the potential impacts of the Hitch Ranch Development.

Respondents are directed to set aside the amendment to the circulation element of the General Plar amendment to extend High Street, and refrain from further consideration of approval until full compliance with CEQA is achieved, including certification of an adequate EIR and adoption of feasible project mitigations and alternatives based on findings supported by substantial evidence.

California Register of Historical Resources
State Historical Resources Commission Findings

Tanner Corner
601 Moorpark Avenue, Moorpark, Ventura County

On 3 November 2000, at a regular meeting of the State Historical Resources Commission in Los Angeles, California, pursuant to California Code of Regulations, Title 14, Chapter 11.5, Section 4856, the Commission voted unanimously to list the Tanner Corner building in the California Register of Historical Resources. Pursuant to California Code of Regulations, Title 14 Chapter 11.5, Section 4855, published herewith are the findings of the Commission.

FINDINGS

The State historical Resources Commission finds the resource significant under criteria 1, 2 and 3, for the period 1913-1953, because of its association with the events and patterns of development of Moorpark, it being one of three original commercial buildings from the early days of Moorpark, and it being the only one remaining from that time period; secondly, its association with a significant person in the development of that community; thirdly, because of its distinctive architectural characteristics as seen in the skilled masonry that have made it a local landmark; and finally, because of its high degree of integrity. This building has served as the community's first garage and first fire station, and has housed the Water Department and the Justice Department, and was used as a temporary morgue when the St. Francis Dam broke in 1928. The period of historical significance is 1913 to 1953, although the building continues to be used as a commercial space.

The original building was built in 1900 by a blacksmith as a barn with post and beam construction resting on a sill formed from railroad ties. The 2X6 beams were butted together and reinforced with a 1X6 beam five feet long attached to either side to secure the joint. As the building was first used by a blacksmit' it probably had a dirt floor. The exterior walls were originally lumber, but in 1913 the brick walls were installed. The brickwork is unusual and very much the effort of skilled masons of the period. Each course is three bricks laid side by side to form a wall 18 inches deep, approximately 20 feet in height, 140 feet in overall length. The squared-off corner of the building sits at the southwest corner of High Street and Moorpark Avenue. The main entry is located in that angled wall. The corners of this angle are again representative of the art of the mason; the bricks at the outer edge are angled in such a way to provide visual appeal. The entry is framed in a distinctive manner and the bricks are of an unusual color. The roof that was originally covered with shakes was reinforced in recent years with right angle trusses resting on the beams as an earthquake safety precaution. The roof was at one time covered with metal sheeting, but recently has be redone with plywood underlayment, 30-pound felt, and roofing shingles.

Mr. Ira Tanner, originally from Kentucky, came to Moorpark in 1913 when the town had only dirt roads and just a few houses and store buildings. As Tar er had been a mechanic since 1905 when gasoline engines were fairly new, he opened the Mission Garage. He was the first mechanic in the area. In 1920, he organized the first volunteer fire department and was elected chief. The fire-fighting equipment, which then consisted of buckets, gunnysacks, shovels and hoes, was housed in this building. Community fundraisers were held to obtain funds for supplies and equipment. A siren was purchased and placed on the building to call the firemen to emergencies. Later Mr. Tanner built a trailer using a Model A chassis and solid rubber tires, which he towed behind his garage service truck, carrying a five-gallon water pump, cans, sacks and shovels. In 1932, the Ventura County Fire Protection District was formed, Mr. Tanner was named chief, and a Mack-Pumper was stationed in Mr. Tanner's Garage. In 1942, Mr. Tanner deeded land, which he had purchased from the school district for one dollar, to the Ventura County Fire Protection District to establish a Ventura County Fire Station.

Mr. Tanner was a member of the Board of Trustees of the school district at the time of construction of Moorpark's first high school. He was also an active member of the Methodist Church and a trustee at the time of construction of the new church. Mr. Tanner was also manager of the water district, retiring in 1952 after eighteen years of service in that capacity and twelve years prior experience as a member of the board of supervisors. Forced into retirement by county ordinance at age of seventy, Mr. Tanner was honored by the community in July 1953. Hailed in local newspapers for his many years of service to the community, even the Los Angeles Times carried an article headlined, "Mayor of Moorpark to Retire.' Mr. Tanner's service to the community continued past his retirement until

his death. He was a leader in the community and participated in various aspects of its development for more than fifty years.

The building exterior looks very much as it did in 1913 after the brick facing was in place. The signage has changed to reflect current usage and cloth awnings now cover the windows. The three gas pumps and the porch roof which sheltered the main entrance and the pumps has been removed. The main entrance itself has never been changed, but the auto opening on the east side has been replaced with glass and lumber, leaving the framework of the garage door intact. The door opening on the east side remains, as do the original windows. At the southern side of the building the garage door is still in place and can be slid sideways as per original installation The only structural changes to the bui ng have been the addition in 1992 of steel supports to comply with earthquake safety requirements. The steel has been placed carefully to avoid any changes in the appearance or characteristics of the building. It subsequently survived the 1994 earthquake while a number of nearby buildings were damaged. The present owners note that in the twenty-five years they have owned the building, there has been no need to replace or repair any of the brick work.

Let these findings show that the review and consideration of the nomination of the Tanner Corner Building to the California Register of Historical Resources included the following:

Nomination and supplementary materials including documents pertaining to the application, a copy of the Moorpark town history detailing the uses of the building and Ira Tanner's role in the community, historic and current photos, and letters in support of the nomination.

Letters and other communication from the City Manager of Moorpark and from the City Attorney of Moorpark.

Public Comment.

With this signature, it is hereby certified that the State Historical Resources Commission adopted these findings pursuant to California Code of Regulations, Title 14, Chapter 11.5, Sections 4855 and 4856 on the 3rd day of November 2000.

California Office of Historic Preservation Technical Assistance Series #1

California Environmental Quality Act (CEQA) and Historical Resources

Introduction

The California Environmental Quality Act (CEQA – pronounced see' kwa) is the principal statute mandating environmental assessment of projects in California. The purpose of CEQA is to evaluate whether a proposed project may have an adverse effect on the environment and, if so, if that effect can be reduced or eliminated by pursuing an alternative course of action or through mitigation. CEQA is part of the Public Resources Code (PRC), Sections 21000 et seq.

The CEQA Guidelines are the regulations that govern the implementation of CEQA. The CEQA Guidelines are codified in the California Code of Regulations (CCR), Title 14, Chapter 3, Sections 15000 et seq. and are binding on state and local public agencies.

The basic goal of CEQA is to develop and maintain a high-quality environment now and in the future, while the specific goals of CEQA are for California's public agencies to:

1. Identify the significant environmental effects of their actions; and, either
2. Avoid those significant environmental effects, where feasible; or
3. Mitigate those significant environmental effects, where feasible.

CEQA applies to "projects" proposed to be undertaken or requiring approval by state and local public agencies. "Projects" are activities which have the potential to have a physical impact on the environment and may include the enactment of zoning ordinances, the issuance of conditional use permits and variances and the approval of tentative subdivision maps.

Where a project requires approvals from more than one public agency, CEQA requires ones of these public agencies to serve as the "lead agency."
A "lead agency" must complete the environmental review process required by CEQA. The most basic steps of the environmental review process are:

1. Determine if the activity is a "project" subject to CEQA;
2. Determine if the "project" is exempt from CEQA;

3. Perform an Initial Study to identify the environmental impacts of the project and determine whether the identified impacts are "significant". Based on its findings of "significance", the lead agency prepares one of the following environmental review documents:
   - Negative Declaration if it finds no "significant" impacts;
   - Mitigated Negative Declaration if it finds "significant" impacts but revises the project to avoid or mitigate those significant impacts;
   - Environmental Impact Report (EIR) if it finds "significant" impacts.

The purpose of an EIR is to provide State and local agencies and the general public with detailed information on the potentially significant environmental effects that a proposed project is likely to have, to list ways that the significant environmental effects may be minimized and to indicate alternatives to the project.

Throughout this handout you will find references to various sections of the California Public Resources Code and the Code of Regulations. The various State statutes and regulations can all be accessed on-line at the following websites:
Statutes - http://www.leginfo.ca.gov/calaw.html
Regulations - http://ccr.oal.ca.gov/

This handout is intended to merely illustrate the process outlined in CEQA statute and guidelines relative to historical and cultural resources. These materials on CEQA and other laws are offered by the State Office of Historic Preservation for informational purposes only. This information does not have the force of law or regulation. This handout should not be cited in legal briefs as the authority for any proposition. In the case of discrepancies between the information provided in this handout and the CEQA statute or guidelines, the language of the CEQA statute and Guidelines (PRC § 21000 et seq. and 14 CCR § 15000 et seq.) is controlling. Information contained in this handout does not offer nor constitute legal advice. You should contact an attorney for technical guidance on current legal requirements.

Questions and Answers

When does CEQA apply?

Resources listed in, or determined to be eligible for listing in, the California Register are resources that must be given consideration in the CEQA process.

All projects undertaken by a public agency are subject to CEQA. This includes projects undertaken by any state or local agency, any special district (e.g., a school district), and any public college or university.

CEQA applies to discretionary projects undertaken by private parties. A discretionary project is one that requires the exercise of judgement or deliberation by a public agency in determining whether the project will be approved, or if a permit will be issued. Some common discretionary decisions include placing conditions on the issuance of a permit, delaying demolition to explore alternatives, or reviewing the design of a proposed project. Aside from decisions pertaining to a project that will have a direct physical impact on the environment, CEQA also applies to decisions that could lead to indirect impacts, such as making changes to local codes, policies, and general and specific plans. Judgement or deliberation may be exercised by the staff of a permitting agency or by a board, commission, or elected body.

CEQA does not apply to ministerial projects. A ministerial project is one that requires only conformance with a fixed standard or objective measurement and requires little or no personal judgment by a public official as to the wisdom or manner of carrying out the project. Generally ministerial permits require a public official to determine only that the project conforms with applicable zoning and building code requirements and that applicable fees have been paid. Some examples of projects that are generally ministerial include roof replacements, interior alterations to residences, and landscaping changes.

For questions about what types of projects are discretionary and ministerial within your community, you must contact your local government; usually the local Planning Department handles such issues.

What is the California Register and what does it have to do with CEQA?

Historical resources are recognized as part of the environment under CEQA (PRC § 21002(b), 21083.2, and 21084.1). The California Register is an authoritative guide to the state's historical resources and to which properties are considered significant for purposes of CEQA.

The California Register includes resources listed in or formally determined eligible for listing in the National Register of Historic Places, as well as some California State Landmarks and Points of Historical Interest. Properties of local significance that have been designated under a local preservation ordinance (local landmarks or landmark districts) or that have been identified in a local historical resources inventory may be eligible for listing in the California Register and are presumed to be significant resources for purposes of CEQA unless a preponderance of evidence indicates otherwise (PRC § 5024.1, 14 CCR § 4850).

The California Register statute (PRC § 5024.1) and regulations (14 CCR § 4850 et seq.) require that at the time a local jurisdiction *nominates* an historic resources survey for listing in the California Register, the survey must be updated if it is more than five years old. This is to ensure that a *nominated survey* is as accurate as possible at the time it is listed in the California Register. However, this does not mean that resources identified in a survey that is more than five years old need not be considered "historical resources" for purposes of CEQA. Unless a resource listed in a survey has been demolished, lost substantial integrity, or there is a preponderance of evidence indicating that it is otherwise not eligible for listing, a lead agency should consider the resource to be potentially eligible for the California Register.

However, a resource does not need to have been identified previously either through listing or survey to be considered significant under CEQA. In addition to assessing whether historical resources potentially impacted by a proposed project are listed or have been identified in a survey process, lead agencies have a responsibility to evaluate them against the California Register criteria prior to making a finding as to a proposed project's impacts to historical resources (PRC § 21084.1, 14 CCR § 15064.5(3)).

Are archeological sites part of the California Register?

An archeological site may be considered an historical resource if it is significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military or cultural annals of California (PRC § 5020.1(j)) or if it meets the criteria for listing on the California Register (14 CCR § 4850).

CEQA provides somewhat conflicting direction regarding the evaluation and treatment of archeological sites. The most recent amendments to the CEQA Guidelines try to resolve this ambiguity by directing that lead agencies should first evaluate an archeological site to determine if it meets the criteria for listing in the California Register. If an archeological site is an historical resource (i.e., listed or eligible for listing in the California Register) potential adverse impacts to it must be considered, just as for any other historical resource (PRC § 21084.1 and 21083.2(l)).

If an archeological site is not an historical resource, but meets the definition of a "unique archeological resource" as defined in PRC § 21083.2, then it should be treated in accordance with the provisions of that section.

What is "substantial adverse change" to an historical resource?

Substantial adverse change includes demolition, destruction, relocation, or alteration such that the significance of an historical resource would be impaired (PRC § 5020.1(q)).

While demolition and destruction are fairly obvious significant impacts, it is more difficult to assess when change, alteration, or relocation crosses the threshold of substantial adverse change. The CEQA Guidelines provide that a project that demolishes or alters those physical characteristics of an historical resource that convey its historical significance (i.e., its character-defining features) can be considered to materially impair the resource's significance.

How can "substantial adverse change" be avoided or mitigated?

A project that has been determined to conform with the *Secretary of the Interior's Standards for the Treatment of Historic Properties* can generally be considered to be a project that will not cause a significant impact (14 CCR § 15126.4(b)(1)). In fact, in most cases if a project meets the *Secretary of Interior's Standards for the Treatment of Historic Properties* it can be considered categorically exempt from CEQA (14 CCR § 15331).

Mitigation of significant impacts must lessen or eliminate the physical impact that the project will have on the historical resource. This is often accomplished through redesign of a project to eliminate objectionable or damaging aspects of the project (e.g., retaining rather than removing a character-defining feature, reducing the size or massing of a proposed addition, or relocating a structure outside the boundaries of an archeological site).

Relocation of an historical resource may constitute an adverse impact to the resource. However, in situations where relocation is the only feasible alternative to demolition, relocation may mitigate below a level of significance provided that the new location is compatible with the original character and use of the historical resource and the resource retains its eligibility for listing on the California Register (14 CCR § 4852(d)(1)).

In most cases the use of drawings, photographs, and/or displays does not mitigate the physical impact on the environment caused by demolition or destruction of an historical resource (14 CCR § 15126.4(b)). However, CEQA requires that all feasible mitigation be undertaken even if it does not mitigate below a level of significance. In this context, recordation serves a legitimate archival purpose. The level of documentation required as a mitigation should be proportionate with the level of significance of the resource.

Avoidance and preservation in place are the preferable forms of mitigation for archeological sites. When avoidance is infeasible, a data recovery plan should be prepared which adequately provides for recovering scientifically consequential information from the site. Studies and reports resulting from excavations must be deposited with the California Historical Resources Regional Information Center (see list in Appendix G).

Title 14. California Code of Regulations
Chapter 3. Guidelines for Implementation of the California Environmental Quality Act

Article 9. Contents of Environmental Impact Reports

Sections 15120 to 15132

15120. General

(a) Environmental Impact Reports shall contain the information outlined in this article, but the format of the document may be varied. Each element must be covered, and when these elements are not separated into distinct sections, the document shall state where in the document each element is discussed.

(b) The EIR may be prepared as a separate document, as part of a general plan, or as part of a project report. If prepared as a part of the project report, it must still contain one separate and distinguishable section providing either analysis of all the subjects required in an EIR or, as a minimum, a table showing where each of the subjects is discussed. When the Lead Agency is a state agency, the EIR shall be included as part of the regular project report if such a report is used in the agency's existing review and budgetary process.

(c) Draft EIRs shall contain the information required by Sections 15122 through 15131. Final EIRs shall contain the same information and the subjects described in Section 15132.

(d) No document prepared pursuant to this article that is available for public examination shall include a "trade secret" as defined in Section 6254.7 of the Government Code, information about the location of archaeological sites and sacred lands, or any other information that is subject to the disclosure restrictions of Section 6254 of the Government Code.

Note: Authority cited: Section 21083, Public Resources Code; Reference: Sections 21100, 21105 and 21160, Public Resources Code.

Discussion: This section provides general information on the EIR document. The document may be prepared in a wide variety of formats so long as the essential elements of information are included. In order to promote public understanding of the document, the Guidelines require that when the required elements are not separated into distinct sections, the document must include a statement as to where each element is discussed.

Subsection (b) is also designed to allow Lead Agencies flexibility in preparing the document. This section provides that the EIR may be a separate document by itself, or the EIR may be included within another document. Where the EIR is included within another document, the EIR must be a distinguishable section of that larger document.

The flexibility allowed by this section enables Lead Agencies to achieve efficiencies in different situations. For example, where a Local Agency Formation Commission has prepared a large document analyzing the effects of a proposed annexation, the LAFCO may reduce its cost by including the EIR within the larger document. The decision in Russian Hill Improvement Association v. Board of Permit Appeals, (1974) 44 Cal. App. 3d 158 ruled that the EIR must be a separate, distinguishable document rather than merely a collection of reports prepared for some other purpose. This section allows agencies to combine the EIR with other documents so long as the EIR is a separate identifiable entity that would meet the standards of the Russian Hill decision.

Subsection (c) highlights the differences in contents for draft EIRs and final EIRs. The Guidelines refer so often to draft or final EIRs that the contents should be identified in the introductory section in the article on EIR contents.

Subsection (d) clarifies that limitations on the disclosure of ìtrade secretsî and archaeological sites established by state law outside of CEQA also apply to environmental documents. Limiting disclosure of archaeological sites and sacred lands is particularly important in order to reduce the chances that they might be damaged or destroyed by collectors.

15121. Informational Document

(a) An EIR is an informational document which will inform public agency decision-makers and the public generally of the significant environmental effect of a project, identify possible ways to minimize the significant effects, and describe reasonable alternatives to the project. The public agency shall consider the information in the EIR along with other information which may be presented to the agency.

(b) While the information in the EIR does not control the agency's ultimate discretion on the project, the agency must respond to each significant effect identified in the EIR by making findings under Section 15091 and if necessary by making a statement of overriding consideration under Section 15093.

(c) The information in an EIR may constitute substantial evidence in the record to support the agency's action on the project if its decision is later challenged in court.

Note: Authority cited: Section 21083, Public Resources Code; Reference: Section 21061, Public Resources Code; *Carmel Valley View, Ltd. v. Board of Supervisors*, (1976) 58 Cal. App. 3d 817.

Discussion: This section describes the fundamental role played by the EIR in CEQA. This section makes the point that the EIR provides information to assist the agency in making decisions on the project but does not control the agency's exercise of discretion.

15122. Table of Contents or Index

An EIR shall contain at least a table of contents or an index to assist readers in finding the analysis of different subjects and issues.

Note: Authority cited: Section 21083, Public Resources Code; Reference: Section 21061, Public Resources Code.

Discussion: This section identifies the statutory requirement for an EIR to contain either a table of contents or an index. The requirement is included here in the article on EIR contents in the interest of clarity.

15123. Summary

(a) An EIR shall contain a brief summary of the proposed actions and its consequences. The language of the summary should be a clear and simple as reasonably practical.

(b) The summary shall identify:

(1) Each significant effect with proposed mitigation measures and alternatives that would reduce or avoid that effect;

(2) Areas of controversy known to the Lead Agency including issues raised by agencies and the public; and

(3) Issues to be resolved including the choice among alternatives and whether or how to mitigate the

significant effects.

(c) The summary should normally not exceed 15 pages.

Note: Authority cited: Section 21083, Public Resources Code; Reference: Section 21061, Public Resources Code.

Discussion: This section identifies the statutory requirement for an EIR to contain a summary. The section then provides additional regulatory requirements for the summary. This section requires the summary to focus on the major areas of importance to decision-makers and to use clear, simple language to promote understanding. The section suggests a 15-page limit to the summary.

15124. Project Description

The description of the project shall contain the following information but should not supply extensive detail beyond that needed for evaluation and review of the environmental impact.

(a) The precise location and boundaries of the proposed project shall be shown on a detailed map, preferably topographic. The location of the project shall also appear on a regional map.

(b) A statement of objectives sought by the proposed project. A clearly written statement of objectives will help the lead agency develop a reasonable range of alternatives to evaluate in the EIR and will aid the decision makers in preparing findings or a statement of overriding considerations, if necessary. The statement of objectives should include the underlying purpose of the project..

(c) A general description of the project's technical, economic, and environmental characteristics, considering the principal engineering proposals if any and supporting public service facilities.

(d) A statement briefly describing the intended uses of the EIR.

(1) This statement shall include, to the extent that the information is known to the Lead Agency,

(A) A list of the agencies that are expected to use the EIR in their decision-making, and

(B) A list of permits and other approvals required to implement the project.

(C) A list of related environmental review and consultation requirements required by federal, state, or local laws, regulations, or policies. To the fullest extent possible, the lead agency should integrate CEQA review with these related environmental review and consultation requirements.

(2) If a public agency must make more than one decision on a project, all its decisions subject to CEQA should be listed, preferably in the order in which they will occur. On request, the Office of Planning and Research will provide assistance in identifying state permits for a project.

Note: Authority cited: Section 21083, Public Resources Code; Reference: Sections 21080.3, 21080.4, 21165, 21166, and 21167.2, Public Resources Code; *County of Inyo v. City of Los Angeles* (1977) 71 Cal.App.3d 185.

Discussion: This section requires the EIR to describe the proposed project in a way that will be meaningful to the public, to the other reviewing agencies, and to the decision-makers. Although the statute contains no express requirement for an EIR to contain a project description, the statutory points of analysis need to be supplemented with a project description for the analysis to make sense. This section is a codification of the ruling in *County of Inyo v. City of Los Angeles*, cited in the note. There the court noted that an accurate description of the project has been required by case law interpreting the National Environmental Policy Act. The state court of appeal declared that an accurate, stable, finite project description is an essential element of an informative and legally sufficient EIR under CEQA.

Subsection (b) emphasizes the importance of a clearly written statement of objectives. Compatibility with project objectives is one of the criteria for selecting a reasonable range of project alternatives. Clear project objectives simplify the selection process by providing a standard against which to

measure possible alternatives.

Subsection (d) calls for a brief statement of how the Lead Agency and any Responsible Agencies will use the EIR in their approval or permitting processes. This is necessary to make the EIR fit the Lead Agency concept which requires all permitting agencies to use the same EIR. In addition, it encourages the lead agency to consult with other agencies and to integrate CEQA review with other related environmental reviews. This advances Public Resources Code section 21003 which provides that, to the extent possible, CEQA is to be applied concurrently with other review processes.

15125. Environmental Setting

(a) An EIR must include a description of the physical environmental conditions in the vicinity of the project, as they exist at the time the notice of preparation is published, or if no notice of preparation is published, at the time environmental analysis is commenced, from both a local and regional perspective. This environmental setting will normally constitute the baseline physical conditions by which a lead agency determines whether an impact is significant. The description of the environmental setting shall be no longer than is necessary to an understanding of the significant effects of the proposed project and its alternatives.

(b) When preparing an EIR for a plan for the reuse of a military base, lead agencies should refer to the special application of the principle of baseline conditions for determining significant impacts contained in Section 15229.

(c) Knowledge of the regional setting is critical to the assessment of environmental impacts. Special emphasis should be placed on environmental resources that are rare or unique to that region and would be affected by the project. The EIR must demonstrate that the significant environmental impacts of the proposed project were adequately investigated and discussed and it must permit the significant effects of the project to be considered in the full environmental context.

(d) The EIR shall discuss any inconsistencies between the proposed project and applicable general plans and regional plans. Such regional plans include, but are not limited to, the applicable air quality attainment or maintenance plan or State Implementation Plan, area-wide waste treatment and water quality control plans, regional transportation plans, regional housing allocation plans, habitat conservation plans, natural community conservation plans and regional land use plans for the protection of the Coastal Zone, Lake Tahoe Basin, San Francisco Bay, and Santa Monica Mountains.

(e) Where a proposed project is compared with an adopted plan, the analysis shall examine the existing physical conditions at the time the notice of preparation is published, or if no notice of preparation is published, at the time environmental analysis is commenced as well as the potential future conditions discussed in the plan.

Note: Authority cited: Section 21083, Public Resources Code; Reference: Sections 21061 and 21100, Public Resources Code; *E.P.I.C. v. County of El Dorado* (1982) 131 Cal.App.3d 350; *San Joaquin Raptor/Wildlife Rescue Center v. County of Stanislaus* (1994) 27 Cal.App.4th 713; *Bloom v. McGurk* (1994) 26 Cal.App.4th 1307.

Discussion: Because the concept of a significant effect on the environment focuses on changes in the environment, this section requires an EIR to describe the environmental setting of the project so that the changes can be seen in context. The description of the pre-existing environment also helps reviewers to check the Lead Agency's identification of significant effects. A number of agencies have been required to spend large amounts of public funds to develop regional plans as a way of dealing with large-scale environmental problems involving air and water pollution, solid waste, and transportation. Where individual projects would run counter to the efforts identified as desirable or approved by agencies in the regional plans, the Lead Agency should address the inconsistency between the project plans and the regional plans. As a result of this analysis, Lead Agencies may be able to find ways to modify the project to reduce the inconsistency.

Subsection (a) clarifies that the ìenvironmental settingî is intended to mean the environmental conditions as they exist at the time the Notice of Preparation is filed. This gives the lead agency greater certainty regarding the setting which must be described. The subsection goes on to provide that normally the environmental setting describes the baseline conditions against which the significance of

any physical change in the environment that may occur as a result of the project will be measured.

Regarding subsection (c), in *Antioch v. Pittsburg* (1986) 187 Cal. App. 3d 1325, the court underscored that mere conformity with a general plan (in and of itself) will not justify a finding that the project has no significant environmental effects. In the instant case, a developer sought a site development permit from the City of Pittsburg and the initiation of an assessment district for the construction of major infrastructure for three parcels of land. Although consistent with the general plan, the court found the project level environmental review to be inadequate and ordered an EIR prepared. Subsection (c) further emphasizes the importance of examining the project in its regional context. This is intended to ensure that the environmental setting is comprehensively described.

Subsection (d) reflects the decision in *Environmental Information and Planning Council v. County of El Dorado* (1982) 131 Cal. App. 3d 350, which held that in comparing an old general plan with a new county general plan that would allow less growth than the old plan, the EIR had to address the existing level of actual physical development in the county as the base line for the comparison. The two plans could not be compared with each other without showing how they would relate to the existing level of development.

15126. Consideration and Discussion of Environmental Impacts

All phases of a project must be considered when evaluating its impact on the environment: planning, acquisition, development, and operation. The subjects listed below shall be discussed as directed in Sections 15126.2, 15126.4 and 15126.6, preferably in separate sections or paragraphs of the EIR. If they are not discussed separately, the EIR shall include a table showing where each of the subjects is discussed.

(a) Significant Environmental Effects of the Proposed Project.

(b) Significant Environmental Effects Which Cannot be Avoided if the Proposed Project is Implemented.

(c) Significant Irreversible Environmental Changes Which Would be Involved in the Proposed Project Should it be Implemented.

(d) Growth-Inducing Impact of the Proposed Project.

(e) The Mitigation Measures Proposed to Minimize the Significant Effects.

(f) Alternatives to the Proposed Project.

Note: Authority cited: Section 21083, Public Resources Code; Reference: Sections 21002, 21003, 21100, and 21081.6, Public Resources Code; *Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal.3d 553; *Laurel Heights Improvement Association v. Regents of the University of California* (1988) 47 Cal.3d 376; *Gentry v. City of Murrieta* (1995) 36 Cal.App.4th 1359; and *Laurel Heights Improvement Association v. Regents of the University of California* (1993) 6 Cal.4th 1112.

Discussion: This section specifies that an EIR must discuss, preferably separately, a projectís significant environmental effects, mitigation measures, and a range of alternatives. The 1998 amendments to the Guidelines moved the comprehensive discussion of each of these EIR components, which once resided in section 15126, into sections 15126.2, 15126.4, and 15126.6, respectively.

15126.2 Consideration and Discussion of Significant Environmental Impacts.

(a) The Significant Environmental Effects of the Proposed Project. An EIR shall identify and focus on the significant environmental effects of the proposed project. In assessing the impact of a proposed project on the environment, the lead agency should normally limit its examination to changes in the existing physical conditions in the affected area as they exist at the time the notice of preparation is published, or where no notice of preparation is published, at the time environmental analysis is

commenced. Direct and indirect significant effects of the project on the environment shall be clearly identified and described, giving due consideration to both the short-term and long-term effects. The discussion should include relevant specifics of the area, the resources involved, physical changes, alterations to ecological systems, and changes induced in population distribution, population concentration, the human use of the land (including commercial and residential development), health and safety problems caused by the physical changes, and other aspects of the resource base such as water, historical resources, scenic quality, and public services. The EIR shall also analyze any significant environmental effects the project might cause by bringing development and people into the area affected. For example, an EIR on a subdivision astride an active fault line should identify as a significant effect the seismic hazard to future occupants of the subdivision. The subdivision would have the effect of attracting people to the location and exposing them to the hazards found there.

(b) Significant Environmental Effects Which Cannot be Avoided if the Proposed Project is Implemented. Describe any significant impacts, including those which can be mitigated but not reduced to a level of insignificance. Where there are impacts that cannot be alleviated without imposing an alternative design, their implications and the reasons why the project is being proposed, notwithstanding their effect, should be described.

(c) Significant Irreversible Environmental Changes Which Would be Caused by the Proposed Project Should it be Implemented. Uses of nonrenewable resources during the initial and continued phases of the project may be irreversible since a large commitment of such resources makes removal or nonuse thereafter unlikely. Primary impacts and, particularly, secondary impacts (such as highway improvement which provides access to a previously inaccessible area) generally commit future generations to similar uses. Also irreversible damage can result from environmental accidents associated with the project. Irretrievable commitments of resources should be evaluated to assure that such current consumption is justified.

(d) Growth-Inducing Impact of the Proposed Project. Discuss the ways in which the proposed project could foster economic or population growth, or the construction of additional housing, either directly or indirectly, in the surrounding environment. Included in this are projects which would remove obstacles to population growth (a major expansion of a waste water treatment plant might, for example, allow for more construction in service areas). Increases in the population may tax existing community service facilities, requiring construction of new facilities that could cause significant environmental effects. Also discuss the characteristic of some projects which may encourage and facilitate other activities that could significantly affect the environment, either individually or cumulatively. It must not be assumed that growth in any area is necessarily beneficial, detrimental, or of little significance to the environment.

Note: Authority cited: Section 21083, Public Resources Code. Reference: Sections 21002, 21003, and 21100, Public Resources Code; *Citizens of Goleta Valley v. Board of Supervisors*, (1990) 52 Cal.3d 553; *Laurel Heights Improvement Association v. Regents of the University of California*, (1988) 47 Cal.3d 376; *Gentry v. City of Murrieta* (1995) 36 Cal.App.4th 1359; and *Laurel Heights Improvement Association v. Regents of the University of California* (1993) 6 Cal.4th 1112; *Goleta Union School Dist. v. Regents of the Univ. Of Calif (1995) 37 Cal. App.4th 1025.*

Discussion: This section describes how an EIR must identify and focus on the significant environmental effects, unavoidable significant environmental effects, significant irreversible environmental changes, and growth-inducing impacts which may result from a project. Subsection (a) reiterates the baseline discussion contained in section 15125. Subsection (d), discussing growth-inducing impacts, clarifies that the construction of new facilities may be important because that construction itself may have significant effects.

15126.4 Consideration and Discussion of Mitigation Measures Proposed to Minimize Significant Effects.

(a) Mitigation Measures in General.

(1) An EIR shall describe feasible measures which could minimize significant adverse impacts, including where relevant, inefficient and unnecessary consumption of energy.

(A) The discussion of mitigation measures shall distinguish between the measures which are proposed by project proponents to be included in the project and other measures proposed by the lead, responsible or trustee agency or other persons which are not included but the lead agency determines could reasonably be expected to reduce adverse impacts if required as conditions of approving the project. This discussion shall identify mitigation measures for each significant environmental effect identified in the EIR.

(B) Where several measures are available to mitigate an impact, each should be discussed and the basis for selecting a particular measure should be identified. Formulation of mitigation measures should not be deferred until some future time. However, measures may specify performance standards which would mitigate the significant effect of the project and which may be accomplished in more than one specified way.

(C) Energy conservation measures, as well as other appropriate mitigation measures, shall be discussed when relevant. Examples of energy conservation measures are provided in Appendix F.

(D) If a mitigation measure would cause one or more significant effects in addition to those that would be caused by the project as proposed, the effects of the mitigation measure shall be discussed but in less detail than the significant effects of the project as proposed. (*Stevens v. City of Glendale*(1981) 125 Cal.App.3d 986.)

(2) Mitigation measures must be fully enforceable through permit conditions, agreements, or other legally-binding instruments. In the case of the adoption of a plan, policy, regulation, or other public project, mitigation measures can be incorporated into the plan, policy, regulation, or project design.

(3) Mitigation measures are not required for effects which are not found to be significant.

(4) Mitigation measures must be consistent with all applicable constitutional requirements, including the following:

(A) There must be an essential nexus (i.e. connection) between the mitigation measure and a legitimate governmental interest. *Nollan v. California Coastal Commission*, 483 U.S. 825 (1987); and

(B) The mitigation measure must be "roughly proportional" to the impacts of the project. *Dolan v. City of Tigard*, 512 U.S. 374 (1994). Where the mitigation measure is an *ad hoc* exaction, it must be "roughly proportional" to the impacts of the project. *Ehrlich v. City of Culver City* (1996) 12 Cal.4th 854.

(5) If the lead agency determines that a mitigation measure cannot be legally imposed, the measure need not be proposed or analyzed. Instead, the EIR may simply reference that fact and briefly explain the reasons underlying the lead agency's determination.

(b) Mitigation Measures Related to Impacts on Historical Resources.

(1) Where maintenance, repair, stabilization, rehabilitation, restoration, preservation, conservation or reconstruction of the historical resource will be conducted in a manner consistent with the Secretary of the Interior's Standards for the Treatment of Historic Properties with Guidelines for Preserving,Rehabilitating, Restoring, and Reconstructing Historic Buildings (1995), Weeks and Grimmer, the project's impact on the historical resource shall generally be considered mitigated below a level of significance and thus is not significant.

(2) In some circumstances, documentation of an historical resource, by way of historic narrative, photographs or architectural drawings, as mitigation for the effects of demolition of the resource will not mitigate the effects to a point where clearly no significant effect on the environment would occur.

(3) Public agencies should, whenever feasible, seek to avoid damaging effects on any historical resource of an archaeological nature. The following factors shall be considered and discussed in an EIR for a project involving such an archaeological site:

(A) Preservation in place is the preferred manner of mitigating impacts to archaeological sites. Preservation in place maintains the relationship between artifacts and the archaeological context. Preservation may also avoid conflict with religious or cultural values of groups associated with the

site.

(B) Preservation in place may be accomplished by, but is not limited to, the following:

1. Planning construction to avoid archaeological sites;

2. Incorporation of sites within parks, greenspace, or other open space;

3. Covering the archaeological sites with a layer of chemically stable soil before building tennis courts, parking lots, or similar facilities on the site.

4. Deeding the site into a permanent conservation easement.

(C) When data recovery through excavation is the only feasible mitigation, a data recovery plan, which makes provisions for adequately recovering the scientifically consequential information from and about the historical resource, shall be prepared and adopted prior to any excavation being undertaken. Such studies shall be deposited with the California Historical Resources Regional Information Center. Archeological sites known to contain human remains shall be treated in accordance with the provisions of Section 7050.5 Health and Safety Code. If an artifact must be removed during project excavation or testing, curation may be an appropriate mitigation.

(D) Data recovery shall not be required for an historical resource if the lead agency determines that testing or studies already completed have adequately recovered the scientifically consequential information from and about the archaeological or historical resource, provided that the determination is documented in the EIR and that the studies are deposited with the California Historical Resources Regional Information Center.

Authority: Section 21083, Public Resources Code. Reference: Sections 5020.5, 21002, 21003, 21100 and 21084.1, Public Resources Code; *Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal.3d 553; *Laurel Heights Improvement Association v. Regents of the University of California* (1988) 47 Cal.3d 376; *Gentry v. City of Murrieta* (1995) 36 Cal.App.4th 1359; *Laurel Heights Improvement Association v. Regents of the University of California* (1993) 6 Cal.4th 1112; and *Sacramento Old City Assn. v. City Council of Sacramento* (1991) 229 Cal.App.3d 1011.

15126.6 Consideration and Discussion of Alternatives to the Proposed Project.

(a) Alternatives to the Proposed Project. An EIR shall describe a range of reasonable alternatives to the project, or to the location of the project, which would feasibly attain most of the basic objectives of the project but would avoid or substantially lessen any of the significant effects of the project, and evaluate the comparative merits of the alternatives. An EIR need not consider every conceivable alternative to a project. Rather it must consider a reasonable range of potentially feasible alternatives that will foster informed decisionmaking and public participation. An EIR is not required to consider alternatives which are infeasible. The lead agency is responsible for selecting a range of project alternatives for examination and must publicly disclose its reasoning for selecting those alternatives. There is no ironclad rule governing the nature or scope of the alternatives to be discussed other than the rule of reason. (*Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal.3d 553 and *Laurel Heights Improvement Association v. Regents of the University of California* (1988) 47 Cal.3d 376).

(b) Purpose. Because an EIR must identify ways to mitigate or avoid the significant effects that a project may have on the environment (Public Resources Code Section 21002.1), the discussion of alternatives shall focus on alternatives to the project or its location which are capable of avoiding or substantially lessening any significant effects of the project, even if these alternatives would impede to some degree the attainment of the project objectives, or would be more costly.

(c) Selection of a range of reasonable alternatives. The range of potential alternatives to the proposed project shall include those that could feasibly accomplish most of the basic objectives of the project and could avoid or substantially lessen one or more of the significant effects. The EIR should briefly describe the rationale for selecting the alternatives to be discussed. The EIR should also identify any alternatives that were considered by the lead agency but were rejected as infeasible during the scoping

process and briefly explain the reasons underlying the lead agency's determination. Additional information explaining the choice of alternatives may be included in the administrative record. Among the factors that may be used to eliminate alternatives from detailed consideration in an EIR are:(i) failure to meet most of the basic project objectives, (ii) infeasibility, or (iii) inability to avoid significant environmental impacts.

(d) Evaluation of alternatives. The EIR shall include sufficient information about each alternative to allow meaningful evaluation, analysis, and comparison with the proposed project. A matrix displaying the major characteristics and significant environmental effects of each alternative may be used to summarize the comparison. If an alternative would cause one or more significant effects in addition to those that would be caused by the project as proposed, the significant effects of the alternative shall be discussed, but in less detail than the significant effects of the project as proposed. (*County of Inyo v. City of Los Angeles* (1981) 124 Cal.App.3d 1).

(e) "No project" alternative.

(1) The specific alternative of "no project" shall also be evaluated along with its impact. The purpose of describing and analyzing a no project alternative is to allow decisionmakers to compare the impacts of approving the proposed project with the impacts of not approving the proposed project. The no project alternative analysis is not the baseline for determining whether the proposed project's environmental impacts may be significant, unless it is identical to the existing environmental setting analysis which does establish that baseline (see Section 15125).

(2) The "no project" analysis shall discuss the existing conditions at the time the notice of preparation is published, or if no notice of preparation is published, at the time environmental analysis is commenced, as well as what would be reasonably expected to occur in the foreseeable future if the project were not approved, based on current plans and consistent with available infrastructure and community services. If the environmentally superior alternative is the "no project" alternative, the EIR shall also identify an environmentally superior alternative among the other alternatives.

(3) A discussion of the "no project" alternative will usually proceed along one of two lines:

(A) When the project is the revision of an existing land use or regulatory plan, policy or ongoing operation, the "no project" alternative will be the continuation of the existing plan, policy or operation into the future. Typically this is a situation where other projects initiated under the existing plan will continue while the new plan is developed. Thus, the projected impacts of the proposed plan or alternative plans would be compared to the impacts that would occur under the existing plan.

(B) If the project is other than a land use or regulatory plan, for example a development project on identifiable property, the "no project" alternative is the circumstance under which the project does not proceed. Here the discussion would compare the environmental effects of the property remaining in its existing state against environmental effects which would occur if the project is approved. If disapproval of the project under consideration would result in predictable actions by others, such as the proposal of some other project, this "no project" consequence should be discussed. In certain instances, the no project alternative means "no build" wherein the existing environmental setting is maintained. However, where failure to proceed with the project will not result in preservation of existing environmental conditions, the analysis should identify the practical result of the project's non-approval and not create and analyze a set of artificial assumptions that would be required to preserve the existing physical environment.

(C) After defining the no project alternative using one of these approaches, the lead agency should proceed to analyze the impacts of the no project alternative by projecting what would reasonably be expected to occur in the foreseeable future if the project were not approved, based on current plans and consistent with available infrastructure and community services.

(f) Rule of reason. The range of alternatives required in an EIR is governed by a "rule of reason" that requires the EIR to set forth only those alternatives necessary to permit a reasoned choice. The alternatives shall be limited to ones that would avoid or substantially lessen any of the significant effects of the project. Of those alternatives, the EIR need examine in detail only the ones that the lead agency determines could feasibly attain most of the basic objectives of the project. The range of feasible alternatives shall be selected and discussed in a manner to foster meaningful public participation and informed decision making.

(1) Feasibility. Among the factors that may be taken into account when addressing the feasibility of alternatives are site suitability, economic viability, availability of infrastructure, general plan consistency, other plans or regulatory limitations, jurisdictional boundaries (projects with a regionally significant impact should consider the regional context), and whether the proponent can reasonably acquire, control or otherwise have access to the alternative site (or the site is already owned by the proponent). No one of these factors establishes a fixed limit on the scope of reasonable alternatives. (*Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal.3d 553; see *Save Our Residential Environment v. City of West Hollywood* (1992) 9 Cal.App.4th 1745, 1753, fn. 1).

(2) Alternative locations.

(A) Key question. The key question and first step in analysis is whether any of the significant effects of the project would be avoided or substantially lessened by putting the project in another location. Only locations that would avoid or substantially lessen any of the significant effects of the project need be considered for inclusion in the EIR.

(B) None feasible. If the lead agency concludes that no feasible alternative locations exist, it must disclose the reasons for this conclusion, and should include the reasons in the EIR. For example, in some cases there may be no feasible alternative locations for a geothermal plant or mining project which must be in close proximity to natural resources at a given location.

(C) Limited new analysis required. Where a previous document has sufficiently analyzed a range of reasonable alternative locations and environmental impacts for projects with the same basic purpose, the lead agency should review the previous document. The EIR may rely on the previous document to help it assess the feasibility of potential project alternatives to the extent the circumstances remain substantially the same as they relate to the alternative. (*Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal.3d 553, 573).

(3) An EIR need not consider an alternative whose effect cannot be reasonably ascertained and whose implementation is remote and speculative. (*Residents Ad Hoc Stadium Committee v. Board of Trustees* (1979) 89 Cal. App.3d 274).

Note: Authority cited: Section 21083, Public Resources Code. Reference: Sections 21002, 21002.1, 21003, and 21100, Public Resources Code; *Citizens of Goleta Valley v. Board of Supervisors*, (1990) 52 Cal.3d 553; *Laurel Heights Improvement Association v. Regents of the University of California*, (1988) 47 Cal.3d 376; *Gentry v. City of Murrieta* (1995) 36 Cal.App.4th 1359; and *Laurel Heights Improvement Association v. Regents of the University of California* (1993) 6 Cal.4th 1112.

Discussion: This section examines the required discussion of project alternatives. Subsection (b) states that the discussion shall focus on alternatives to the project or its location which can avoid or substantially lessen any of the significant impacts of the project and shall evaluate their comparative merits. Subsection (c) includes guidance on the selection of a reasonable range of feasible alternatives, including the need to document the process of selecting alternatives. Subsection (e) describes the ìno projectî alternative, including its relationship to the baseline conditions under which the project is evaluated for potential significance and the analysis of the potential impacts if the project is not undertaken. Subsection (f) discusses the ìrule of reasonî in detail, including such factors as feasibility, location, and speculation, which help agencies select a reasonable range of alternatives.

15127. Limitations on Discussion of Environmental Impact

The information required by Section 15126.2(c) concerning irreversible changes, need be included only in EIRs prepared in connection with any of the following activities:

(a) The adoption, amendment, or enactment of a plan, policy, or ordinance of a public agency;

(b) The adoption by a Local Agency Formation Commission of a resolution making determinations; or

(c) A project which will be subject to the requirement for preparing an environmental impact statement pursuant to the requirements of the National Environmental Policy Act of 1969, 42 U.S.C. 4321-4347.

Note: Authority cited: Section 21083, Public Resources Code; Reference: Section 21100.1, Public Resources Code.

Discussion: The reference in this section to previous subsection (e) of Section 15126 has been deleted. The statutory requirement for a discussion of the relationship between short-term uses and long-term productivity was repealed by Chapter 1230 of the Statutes of 1994.

15128. Effects Not Found to be Significant

An EIR shall contain a statement briefly indicating the reasons that various possible significant effects of a project were determined not to be significant and were therefore not discussed in detail in the EIR. Such a statement may be contained in an attached copy of an Initial Study.

Note: Authority cited: Section 21083, Public Resources Code; Reference: Section 21100, Public Resources Code.

Discussion: This section repeats the statutory requirement from Section 21100 for an EIR to contain a brief statement explaining why various effects of the project were found not to be significant. The section then adds the administrative interpretation that this statement may be provided by an attached copy of the Initial Study. Using the Initial Study would help the Lead Agency avoid duplication in writing and would provide a relatively simple way of meeting this requirement.

15129. Organizations and Persons Consulted

The EIR shall identify all federal, state, or local agencies, other organizations, and private individuals consulted in preparing the draft EIR, and the persons, firm, or agency preparing the draft EIR, by contract or other authorization.

Note: Authority cited: Section 21083, Public Resources Code; Reference: Sections 21104 and 21153, Public Resources Code.

Discussion: This section requires the Lead Agency to disclose the agencies, organizations, and individuals whom it consulted pursuant to Sections 21104 or 21153.

15130. Discussion of Cumulative Impacts

(a) An EIR shall discuss cumulative impacts of a project when the project's incremental effect is cumulatively considerable, as defined in section 15065(a)(3). Where a lead agency is examining a project with an incremental effect that is not "cumulatively considerable," a lead agency need not consider that effect significant, but shall briefly describe its basis for concluding that the incremental effect is not cumulatively considerable.

(1) As defined in Section 15355, a cumulative impact consists of an impact which is created as a result of the combination of the project evaluated in the EIR together with other projects causing related impacts. An EIR should not discuss impacts which do not result in part from the project evaluated in the EIR.

(2) When the combined cumulative impact associated with the project's incremental effect and the effects of other projects is not significant, the EIR shall briefly indicate why the cumulative impact is not significant and is not discussed in further detail in the EIR. A lead agency shall identify facts and analysis supporting the lead agency's conclusion that the cumulative impact is less than significant.

(3) An EIR may determine that a project's contribution to a significant cumulative impact will be rendered less than cumulatively considerable and thus is not significant. A project's contribution is less than cumulatively considerable if the project is required to implement or fund its fair share of a mitigation measure or measures designed to alleviate the cumulative impact. The lead agency shall identify facts and analysis supporting its conclusion that the contribution will be rendered less than

cumulatively considerable.

(b) The discussion of cumulative impacts shall reflect the severity of the impacts and their likelihood of occurrence, but the discussion need not provide as great detail as is provided for the effects attributable to the project alone. The discussion should be guided by standards of practicality and reasonableness, and should focus on the cumulative impact to which the identified other projects contribute rather than the attributes of other projects which do not contribute to the cumulative impact. The following elements are necessary to an adequate discussion of significant cumulative impacts:

(1) Either:

(A) A list of past, present, and probable future projects producing related or cumulative impacts, including, if necessary, those projects outside the control of the agency, or

(B) A summary of projections contained in an adopted general plan or related planning document, or in a prior environmental document which has been adopted or certified, which described or evaluated regional or areawide conditions contributing to the cumulative impact. Any such planning document shall be referenced and made available to the public at a location specified by the lead agency.

(2) When utilizing a list, as suggested in paragraph (1) of subdivision (b), factors to consider when determining whether to include a related project should include the nature of each environmental resource being examined, the location of the project and its type. Location may be important, for example, when water quality impacts are at issue since projects outside the watershed would probably not contribute to a cumulative effect. Project type may be important, for example, when the impact is specialized, such as a particular air pollutant or mode of traffic.

(3) Lead agencies should define the geographic scope of the area affected by the cumulative effect and provide a reasonable explanation for the geographic limitation used.

(4) A summary of the expected environmental effects to be produced by those projects with specific reference to additional information stating where that information is available; and

(5) A reasonable analysis of the cumulative impacts of the relevant projects. An EIR shall examine reasonable, feasible options for mitigating or avoiding the project's contribution to any significant cumulative effects.

(c) With some projects, the only feasible mitigation for cumulative impacts may involve the adoption of ordinances or regulations rather than the imposition of conditions on a project-by-project basis.

(d) Previously approved land use documents such as general plans, specific plans, and local coastal plans may be used in cumulative impact analysis. A pertinent discussion of cumulative impacts contained in one or more previously certified EIRs may be incorporated by reference pursuant to the provisions for tiering and program EIRs. No further cumulative impacts analysis is required when a project is consistent with a general, specific, master or comparable programmatic plan where the lead agency determines that the regional or areawide cumulative impacts of the proposed project have already been adequately addressed, as defined in section 15152(f), in a certified EIR for that plan.

(e) If a cumulative impact was adequately addressed in a prior EIR for a community plan, zoning action, or general plan, and the project is consistent with that plan or action, then an EIR for such a project should not further analyze that cumulative impact, as provided in Section 15183(j).

Note: Authority cited: Section 21083, Public Resources Code. Reference: Sections 21083(b), 21093, 21094 and 21100, Public Resources Code; *Whitman v. Board of Supervisors,* (1979) 88 Cal. App. 3d 397; *San Franciscans for Reasonable Growth v. City and County of San Francisco* (1984) 151 Cal.App.3d 61; *Kings County Farm Bureau v. City of Hanford* (1990) 221 Cal.App.3d 692; *Laurel Heights Homeowners Association v. Regents of the University of California* (1988) 47 Cal.3d 376; *Sierra Club v. Gilroy* (1990) 220 Cal.App.3d 30; *Citizens to Preserve the Ojai v. County of Ventura* (1985) 176 Cal.App.3d 421; *Concerned Citizens of South Cent. Los Angeles v. Los Angeles Unified Sch. Dist.* (1994) 24 Cal.App.4th 826; *Las Virgenes Homeowners Fed'n v. County of Los Angeles* (1986) 177 Cal.App.3d 300; *San Joaquin Raptor/Wildlife Rescue Ctr v. County of Stanislaus* (1994) 27 Cal.App.4th 713; *Fort Mojave Indian Tribe v. Cal. Dept. Of Health Services* (1995) 38 Cal.App.4th 1574; and *Communities for a Better Environment v. California Resources Agency* (2002) 103

Cal.App.4th 98.

Discussion: This section is necessary to explain how to discuss cumulative impacts in an EIR. The section limits the discussion to situations where the cumulative effects are found to be significant. Further, the section codifies the requirements for analysis of cumulative effects as spelled out in *Whitman v. Board of Supervisors*, cited in the note, but the section allows the alternative approach of summarizing projections from a planning document. The options allow the Lead Agency to choose the method of analysis that may be best suited to the situation at hand. Essential guidance is also provided on approaches to mitigating cumulative effects, since cumulative effects can rarely be mitigated in the same way as the primary effects of an individual project.

When analyzing the cumulative impacts of a project under 15130 (b)(1)(A), the Lead Agency is required to discuss not only approved projects under construction and approved related projects not yet under construction, but also unapproved projects currently under environmental review with related impacts or which result in significant cumulative impacts. This analysis should include a discussion of projects under review by the Lead Agency and projects under review by other relevant public agencies, using reasonable efforts to discover, disclose, and discuss the other related projects. The cumulative impact analysis requires a discussion of projects with related cumulative impacts which required EIRs, Negative Declarations, or were exempt from CEQA. (See: *San Franciscans for Reasonable Growth v. City and County of San Francisco*, (1984) 151 Cal. App. 3d 61.) The court in SFFRG took note of the problem of where to draw the line on projects undergoing environmental review since application of new projects are constantly being submitted. A reasonable point might be after the preparation of the draft EIR. Additional project information could be included in the final EIR if cumulative impacts were originally analyzed in the draft EIR and if the new project information doesn't warrant the preparation of a subsequent or supplemental EIR as required by Section 15162 of the Guidelines.

Subsection (b)(1)(B) authorizes a lead agency to limit its analysis of probable future projects to those which are planned or which have had an application made at the time the NOP is released for review. This describes a reasonable point in time at which to begin the cumulative impact analysis. Without this guideline, the cumulative impact analysis may suffer frequent revision as new, incremental projects are identified. If additional projects are identified later, they may be addressed during completion of the final EIR.

Cumulative impacts analysis must include reasonably anticipated future activities of a project or associated with the project. Whether these activities are addressed in the cumulative impact analysis section or in the impacts associated with the project, as defined, if there is substantial evidence indicating reasonable foreseeable future projects or activities, an EIR must analyze the impacts of those future activities. The Court in *Laurel Heights* set forth the following two pronged test to determine whether an EIR must include an analysis of the environmental effects of future activities: (1) it is a reasonably foreseeable consequence of the initial project; and (2) the future action will be significant in that it will likely change the scope or nature of the initial project or its environmental effects. Absent these two circumstances, potential future expansion need not be considered. *Laurel Heights Improvement Association v. Regents of the University of California* (1988) 47 Cal. 3d 376.

Consistent with the holding in *Antioch v. Pittsburg* (see discussion with Section 15126), a cumulative impact analysis should address the most probable development patterns.

This section describes the analysis necessary where a project will make a considerable contribution to a cumulative effect (see also section 15064). Based on the holding in San Joaquin Raptor/Wildlife Rescue Center v. County of Stanislaus (1996) 42 Cal.App.4th 608, subdivision (a) provides that when the lead agency determines that a project makes only a de minimus contribution to a cumulative effect no analysis of the cumulative effect is needed. This subsection also provides that an EIR may determine that a projectís contribution, originally thought to be considerable, is less than considerable with mitigation. Any such conclusion must be documented in the EIR.

Subsection (b) discusses the elements necessary for an adequate discussion of significant cumulative impacts. It recommends that the discussion focus on the particular cumulative impact to which other projects contribute rather than on the non-contributing aspects of those projects. This subsection offers further guidance on focusing the discussion on impacts rather than on other projects per se.

Subsection (d) links cumulative impact analysis to tiering and other similar approaches which seek to

limit redundant analyses. Where cumulative impacts have been adequately addressed in the EIR certified for a general plan or other programmatic plan, and the project is consistent with that plan, the discussion contained in the prior EIR may be incorporated by reference. No further cumulative impact analysis would be necessary.

15131. Economic and Social Effects

Economic or social information may be included in an EIR or may be presented in whatever form the agency desires.

(a) Economic or social effects of a project shall not be treated as significant effects on the environment. An EIR may trace a chain of cause and effect from a proposed decision on a project through anticipated economic or social changes resulting from the project to physical changes caused in turn by the economic or social changes. The intermediate economic or social changes need not be analyzed in any detail greater than necessary to trace the chain of cause and effect. The focus of the analysis shall be on the physical changes.

(b) Economic or social effects of a project may be used to determine the significance of physical changes caused by the project. For example, if the construction of a new freeway or rail line divides an existing community, the construction would be the physical change, but the social effect on the community would be the basis for determining that the effect would be significant. As an additional example, if the construction of a road and the resulting increase in noise in an area disturbed existing religious practices in the area, the disturbance of the religious practices could be used to determine that the construction and use of the road and the resulting noise would be significant effects on the environment. The religious practices would need to be analyzed only to the extent to show that the increase in traffic and noise would conflict with the religious practices. Where an EIR uses economic or social effects to determine that a physical change is significant, the EIR shall explain the reason for determining that the effect is significant.

(c) Economic, social, and particularly housing factors shall be considered by public agencies together with technological and environmental factors in deciding whether changes in a project are feasible to reduce or avoid the significant effects on the environment identified in the EIR. If information on these factors is not contained in the EIR, the information must be added to the record in some other manner to allow the agency to consider the factors in reaching a decision on the project.

Note: Authority cited: Section 21083, Public Resources Code; Reference: Sections 21001(e) and (g), 21002, 21002.1, 21060.5, 21080.1, 21083(c), and 21100, Public Resources Code.

Discussion: This section is necessary because there has been confusion over the authority of a Lead Agency to include economic and social information in an EIR. This section resolves the controversy by providing the authority with the rationale for including the information.

The term "significant effect on the environment" is defined in Section 21068 of CEQA as meaning "a substantial or potentially substantial adverse change in the environment." This focus on physical changes is further reinforced by Sections 21100 and 21151.

Despite the implication of these sections, CEQA does not focus exclusively on physical changes, and it is not exclusively physical in concern. For example, in Section 21083(c), CEQA requires an agency to determine that a project may have a significant effect on the environment if it will cause substantial adverse effects on human beings, either directly or indirectly. This section was added to CEQA by the same bill in 1972 (AB 889, Chapter 1154 of the Statutes of 1972) that added the definition of the term "environment" and the term "project".

The interpretation provided in Section 15131 starts with the analysis as used in the *Friends of Mammoth* decision, (1972) 8 Cal. 3d 247. The analysis begins with the question of whether the governmental action involved will culminate in a physical change. There must be a physical change resulting from the project directly or indirectly before CEQA will apply. Direct physical changes are easy to identify. Indirect examples could include the increased traffic, fuel consumption, and air pollution as the potential results of a bus system fare increase in *Shaw v. Golden Gate Bridge etc. District*, (1976) 60 Cal. App. 3d 699.

Once a physical change or a potential physical change has been identified, the Lead Agency must determine whether substantial evidence exists indicating that the physical change will be significant and thereby require preparation of an EIR. Public Resources Code section 21082.2, subdivision (c), states that evidence of social or economic impacts which do not contribute to or are not caused by physical impacts on the environment is not "substantial evidence" that would show those impacts to be significant.

Under the interpretation provided in this section, effects on facilities or services are not automatically regarded as significant effects of a project. The changes must be related to or caused by physical changes. If the project causes a direct physical change in a facility by pumping ground water and causing ground settling under the facility, the resulting deterioration can be easily regarded as a significant effect. If the project causes physical changes that affect the use of the facility, the effects on use may be considered a significant effect in the same way as increases in traffic are often treated as significant effects.

In *Citizens Association for Sensible Development of Bishop Area v. Inyo* (1985) 172 Cal. App. 3d 151, the court held that "economic or social change may be used to determine that a physical change shall be regarded as a significant effect of the environment. Where a physical change is caused by economic or social effects of a project, the physical change may be regarded as a significant effect in the same manner as any other physical change resulting from the project. Alternatively, economic and social effects of a physical change may be used to determine that the physical change is a significant effect on the environment." In this case, the Court held that an EIR for a proposed shopping center located away from the downtown shopping area must discuss the potential economic and social consequences of the project, if the proposed center would take business away from the downtown and thereby cause business closures and eventual physical deterioration of the downtown.

15132. Contents of Final Environmental Impact Report

The Final EIR shall consist of:

(a) The draft EIR or a revision of the draft.

(b) Comments and recommendations received on the draft EIR either verbatim or in summary.

(c) A list of persons, organizations, and public agencies commenting on the draft EIR.

(d) The responses of the Lead Agency to significant environmental points raised in the review and consultation process.

(e) Any other information added by the Lead Agency.

Note: Authority cited: Section 21083, Public Resources Code; Reference: Section 21100, Public Resources Code.

Discussion: This section is necessary in order to explain the difference between a draft EIR and the final EIR which is ultimately considered by the decision-makers in each agency prior to granting an approval for the project. The final EIR is a necessary document because it brings together a number of subjects such as comments and responses to comments which would not be available in the draft EIR that is sent out for public review. The list of contents is also necessary in order to show that the findings on the feasibility of avoiding or reducing significant effects and the statement of overriding considerations are not part of the final EIR. The findings and the statement of overriding considerations are made after the decision-makers have considered the final EIR. The findings and statement are included in the public record but not in the final EIR.

Subject: Re: Hitch Ranch Comment

Hello Doug,
Thank you for getting back to me about comments for the Hitch Ranch Project. Here are my comments.

Respected members of the Planning Commission,
To allow the density change from 415 to 755 units is an 82% increase. That number alone is very concerning.
The developers need to allow for at least 3 vehicles per housing unit which is a minimum of 1245 for 415 units and 2265 for 755 units. Multi unit buildings never have enough parking so vehicles will spill into the surrounding streets.
If vehicles exit onto Casey to the east, it doesn't matter if you widen Casey. Moorpark avenue is a 2 lane street that is already a busy truck corridor and frequently backs up already at High St. due to current traffic levels and daily train traffic. Several small streets feed onto Moorpark avenue and will be heavily impacted by increased traffic flow.
High street cannot be widened without removing part of the Post Office parking lot since the commercial building at the NW corner of Moorpark avenue and High street is an historical landmark.
Adding another street that dumps traffic onto L.A.avenue further west requires another signal that will further impact and slow traffic on an already congested corridor that backs up from Somis almost to Moorpark already around 4 pm every day and on weekends.
There will be a minimum of 2 car trips per day for the 2265 vehicles in this proposed development adding an additional vehicle load of a minimum of 4530 vehicle trips on city streets and most probably more.
Poindexter already stops in both directions twice a day at Chaparral school as parents try to get in and out of the parking lot with children because the street is not wide enough to pass on.
I don't believe this developer cares about the impact to our city. The visual, environmental and traffic fallout won't affect their company. They want to make as much money as possible and move on. Why else would a proposal to increase density by 82% be put forward?
The proposed density is totally at odds with the current lot size, lifestyle and housing density of the long established area directly north of the proposed development.
The evacuation of this density onto already busy streets in an emergency situation would be extremely

difficult.
Although this area is not filled with completely native plant life, it provides cover, habitat and hunting for local wildlife. The proposed density would completely destroy this wildlife corridor.
The city leaders keep saying they don't want Moorpark to become another San Fernando Valley. I think the increased density being proposed will contribute to exactly that. How many other projects are on line with this same thought process and end result?
I urge this commission to vote no on the proposed increase in density.
Sincerely,
Nancy Wagenbach

Good Morning Nancy,

Please reply with any comments you'd like to provide regarding Hitch Ranch. We will address these in the Environmental Impact Report that will be prepared for the project. I've also added you to our project mailing list to receive notices when studies and reports are released, as well as for upcoming Planning Commission meetings. We also host a project website (which will be more fully developed within the next week) at: https://www.moorparkca.gov/824/Hitch-Ranch-Specific-Plan

Thank you for your attention to this project.

Best,

Doug

Single Family Housing	427.00	Dwelling Unit	215.33	768,600.00	1307

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.6	**Precipitation Freq (Days)**	31
Climate Zone	8			**Operational Year**	2027
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	390.98	**CH4 Intensity (lb/MWhr)**	0.033	**N2O Intensity (lb/MWhr)**	0.004

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Land uses per Project Description in EIR. 277.3-acre site with 55.2 undisturbed and 6.77 for city park

Construction Phase - Phase duration per project applicant.

Off-road Equipment -

Off-road Equipment -

Off-road Equipment -

Off-road Equipment -

Trips and VMT - Trips (worker and vendor) during building construction and arch coating reflect proportion of project constructed during each phase. Grading material balanced on-site, no off-site hauling trips required.

Hitch Ranch Specific Plan - AQ Emissions - Ventura County APCD Air District, Summer

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied

Grading - No import/export per project applicant for grading P1 and grading P3, balanced on-site. Other phases only fine grading for building pads.

Architectural Coating - Coating square footage distributed proportionately by amount of project being constructed per phase. VCAPCD Rule 74.2.

Vehicle Trips - Trip rates and VMT to match project traffic study.

Area Coating - VCAPCD Rule 74.2

Area Mitigation - VCPACPD Rule 74.2

Energy Mitigation - Compliance with 2019 Building Energy Efficiency Standards, which require on-site solar to meet 100% of electricity requirements for residential uses 3 stories or less, plus rooftop solar system for four-story building included in project design

Water Mitigation - Compliance with CALGreen requirements

Single Family Housing	427.00	Dwelling Unit	215.33	768,600.00	1307

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.6	**Precipitation Freq (Days)**	31
Climate Zone	8			**Operational Year**	2027
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	390.98	**CH4 Intensity (lb/MWhr)**	0.033	**N2O Intensity (lb/MWhr)**	0.004

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Land uses per Project Description in EIR. 277.3-acre site with 55.2 undisturbed and 6.77 for city park

Construction Phase - Phase duration per project applicant.

Off-road Equipment -

Off-road Equipment -

Off-road Equipment -

Off-road Equipment -

Trips and VMT - Trips (worker and vendor) during building construction and arch coating reflect proportion of project constructed during each phase. Grading material balanced on-site, no off-site hauling trips required.

Hitch Ranch Specific Plan - AQ Emissions - Ventura County APCD Air District, Winter

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied

Grading - No import/export per project applicant for grading P1 and grading P3, balanced on-site. Other phases only fine grading for building pads.

Architectural Coating - Coating square footage distributed proportionately by amount of project being constructed per phase. VCAPCD Rule 74.2.

Vehicle Trips - Trip rates and VMT to match project traffic study.

Area Coating - VCAPCD Rule 74.2

Area Mitigation - VCPACPD Rule 74.2

Energy Mitigation - Compliance with 2019 Building Energy Efficiency Standards, which require on-site solar to meet 100% of electricity requirements for residential uses 3 stories or less, plus rooftop solar system for four-story building included in project design

Water Mitigation - Compliance with CALGreen requirements

MEMORANDUM

To: Douglas Spondello, Planning Manager, City of Moorpark
From: Kaitlyn Heck, Air Quality Technical Specialist, Impact Sciences
Subject: Hitch Ranch Health Risk Assessment
Date: November 9, 2020
Job No. 1318.001

This health risk assessment (HRA) calculates the health risk posed to the nearby sensitive receptors as a result of project construction and operation. Additionally, the HRA calculates the health risk posed to an onsite residential receptor living on the project site following Phase 2 of construction of Hitch Ranch. This report has been prepared by Impact Sciences, Inc., in support of the environmental documentation being prepared pursuant to the California Environmental Quality Act (CEQA). This analysis considers both the temporary risks resulting from project construction and the long-term risk associated with project operation.

Project Description

The proposed project would develop the 253.94-acre project site located in southeastern Ventura County in the City of Moorpark. Specifically, the site is approximately 1,600 feet west of State Route 23 and extents to approximately 1,400 feet west of Gabbert Road. The proposed project would construct a total of 755 residential units, including 456 single-family homes and 299 multi-family residences over six phases of construction. Phases 1 and 3 of construction includes the site preparation and grading of the project site. Phases 2, 4, 5, and 6 will include the construction of the 755 dwelling units, over Planning Areas 1 to 4, see **Table 1, Residential Project Buildout** and **Figure 1, Specific Land Use Plan**. Additionally, the project site will include approximately 110 acres of open space, manufactured slopes, or recreational lots.

Table 1

Residential Project Buildout

Phase	Year	Land Use Type	Construction Activity	Planning Area

Health Risk Methodology and Modeling

Temporary project impacts related to health risk can occur from project construction activity, which would generate dust and equipment exhaust that could affect nearby sensitive receptors. Construction of the proposed project would include site clearance and grading, placement of utilities, building construction, paving, application of architectural coatings, and interior finishing. Construction equipment and associated heavy-duty truck trips generate exhaust which contains diesel particulate matter (DPM), known as a toxic air contaminant (TAC).

Operation of the project site would generate vehicle trips to and from residences. Since this is a residential project, most of the vehicle trips are expected to come from gasoline powered passenger cars. However, the site may attract some heavy-duty diesel trucks which emit DPM.

Construction and operational emissions were estimated from CalEEMod and dispersion modeling was conducted to predict the off-site concentration resulting from project construction and operation, so that the lifetime excess cancer risk and non-cancer health risk could be predicted. The HRA was conducted following methods in the Office of Environmental Health Hazard Assessment's (OEHHA) *Guidance Manual for*

Preparation of Health Risk Assessments[1] and CAPCOA's *Air Toxics Hot Spots Program*.[2] The cancer and non-cancer risks were compared to VCAPCD's thresholds, which include:[3]

- Lifetime probability of contracting cancer is greater than 10 in one million
- Ground-level concentrations of non-carcinogenic toxic air pollutants would result in a Hazard Index of greater than 1.

The VCAPCD identifies sensitive groups as children, the elderly, and those suffering from acute and chronic medical conditions which may lead to a higher likelihood of suffering from adverse health effects from air pollution. Land uses where such people are likely to reside or spend a substantial amount of time include residences, schools, playgrounds, day care centers, job sites, retirement homes, convalescent homes, and hospitals. The closest sensitive receptors to the project site include residences on the east side of the project site, residences directly south of Poindexter Avenue, Walnut Canyon Elementary School, and Chaparral Middle School.

Health risks were evaluated for a hypothetical maximum exposed individual (MEI) located near the project site. The hypothetical MEI is an individual assumed to be located where the highest concentrations of air pollutants are predicted to occur as a result of project construction. As presented in **Table 2, Nearby Sensitive Receptors**, the nearest sensitive receptors are Walnut Canyon Elementary School located 75 feet southeast and a single-family residence located approximately 100 feet east of the project site.

Cancer Risk. The CalEEMod model provided annual PM2.5 exhaust emissions (assumed to be DPM) from off-road construction equipment used during project construction and exhaust emissions from on-road vehicles (haul trucks, vendor trucks, and worker vehicles) for each phase of project construction. Additionally, the CalEEMod model provided the operational PM2.5 exhaust emissions upon full project buildout. To evaluate the operational emissions following each phase of operation, it was assumed that the proportion of operational PM2.5 mobile source exhaust emitted would be equivalent to the proportion of dwelling units constructed during the phase. For example, Phase 2 would result in the construction and operation of 250 dwelling units, approximately 33% of the total dwelling units proposed. Therefore, following Phases 2 and 3 of construction, the proposed project will emit approximately 33% of the full buildout operational mobile-source emissions as Phase 3 is under construction. Moreover, upon completion of Phase 4, approximately 450 units will be completed and operational (200 units constructed during Phase 4 in addition to the 250 units constructed during Phase 2). Thus, following Phase 4, the proposed project will emit approximately 60% of the full buildout mobile-source operational emissions as Phase 5 is under construction. Finally, upon completion of Phase 5, approximately 650 units will be completed and operational. Thus, following Phase 5, the proposed project will emit approximately 86% of the full buildout mobile-source operational emissions as Phase 6 is under construction. [4]

[4] Phase 1 of construction only involves grading and paving, therefore operational emissions will not occur on the project site until the end of Phase 2.

The U.S. Environmental Protection Agency (EPA) AERMOD dispersion model was used to predict concentrations of DPM at sensitive receptors near the project site. To model emissions, a release height of 3 meters was chosen to represent the release height of construction equipment and heavy-duty diesel trucks. Emissions from off-road construction equipment and on-road vehicle travel were distributed throughout the modeled area source. Phase 1 construction emissions were modeled over the entire 270.64-acre project site and the construction emissions for each phase were modeled over the phase's associated planning areas, see **Table 1** (i.e., Phase 2 of construction was modeled over Planning Areas 2 through 4). Mobile-source operational PM2.5 exhaust emissions following Phase 2 were modeled over Planning Areas 2 through 4. Following Phases 3 and 4, operational emissions were modeled over Planning Areas 1 through 4 and following Phase 5, full buildout operational emissions were modeled over the entire project site.

The modeling used the latest available 5-year meteorological data set (2009 to 2014) from the Camarillo Airport prepared for use with the AERMOD model by the California Air Resources Board (CARB). Annual DPM concentrations from construction and operational activities were calculated at nearby and on-site sensitive receptor locations within the default receptor height. The concentration of DPM at the nearest and on-site sensitive receptor estimated in AERMOD was utilized to calculate the cancer risk in accordance with OEHHA and CAPCOA guidelines. The current OEHHA guidance recommends that cancer risks be calculated by age groups to account for different breathing rates and sensitivity to TACs. Specifically, it recommends evaluating the risks for the third trimester of pregnancy to age zero (third trimester exposure), ages zero to less than two (infant exposure), ages two to less than 16 (child exposure), and ages 16 to 30 (adult exposure). Age sensitivity factors (ASFs) associated with the different types of exposure are an ASF of 10 for the third trimester and infant exposure, an ASF of 3 for child exposure, and an ASF of 1 for an adult exposure. Also associated with each exposure type are different breathing rates, expressed as liters per kilograms of body weight per day (L/kg-day). As recommended by the OEHHA, 95th percentile breathing rates are used for the third trimester and infant exposure, and 80th percentile breathing rates are used for child and adult exposure. These age-specific breathing rates are 361 L/kg-day for the third trimester receptor, 1,090 L/kg-day for the infant receptors, 572 L/kg-day for child receptors, and 261 L/kg-day for adult receptors assuming residential exposure. Additionally, age-specific fraction of time at home (FAH) values were used in this analysis. According to OEHHA, FAH values of 0.85 should be used for the third trimester and infant receptors, 0.72 for the child receptors, and 0.73 for adult receptors. Finally, it was assumed that each receptor would have an exposure duration of 350 days per year, consistent with OEHHA guidelines (OEHHA, 2015). According to OEHHA, the cancer risk for a residential receptor is assumed to start in the third trimester of life. Project construction is anticipated to last over five years, therefore the nearest residential receptor would be exposed to project

construction from the third trimester of life, through the infant stage of life (0<2 years), and the beginning part of the child stage of life (2<16 years), see **Table 3, Residential Cancer Risk Assumptions**.

Table 3
Residential Cancer Risk Assumptions

Receptor Scenario	EF	ED (years)	ASFs	FAH	DBR (L/kg-day)
3rd Trimester	350	0.25	10	0.85	361
Infant (0<2 Years)	350	2	10	0.85	1090
Child (2<16 Years)	350	14	3	0.72	572
Adult (16 - 30 Years)	350	14	1	0.73	261

Source: *OEHHA. 2015. Guidance Manual for Preparation of Health Risk Assessments. Available: https://oehha.ca.gov/media/downloads/crnr/2015guidancemanual.pdf*

For a school child receptor, the risk is calculated similarly to the residential cancer risk with different input factors changed to reflect school child exposure. OEHHA recommends that a 95th percentile breathing rate under moderate intensity of 520 L/kg-day be used to estimate the risk to the school child (2<16 years).[5] Exposure duration is assumed to be over 165 days of the year, where a student attends school 5 days per week for approximately 36 weeks over a nine-year period, see **Table 4, School Child Cancer Risk Assumptions.**

Table 4
School Child Cancer Risk Assumptions

Receptor Scenario	EF	ED (years)	ASFs	DBR (L/kg-day)
Child (2<16 Years)	165	9	3	520

Source: *OEHHA. 2015. Guidance Manual for Preparation of Health Risk Assessments. Available: https://oehha.ca.gov/media/downloads/crnr/2015guidancemanual.pdf*

The California Air Resources Board (CARB) recommends the Hotspots Analysis and Reporting Program 2 (HARP 2) to calculate the excess cancer risk. HARP 2's Risk Assessment Standalone Tool (RAST) incorporates OEHHA 2015 guidance in order to calculate the risk posed to receptors from facility operations. However, since the project involves overlapping phases of construction and operation, the health risk was calculated with OEHHA's methodology. OEHHA provides the following equations in order to estimate the cancer risk posed to sensitive receptors from a project site:

5 *Ibid.*

Inhalation Dose Calculation

Dose – air =C_{air} x {BR/BW} x A x EF x 10^{-6}

Where,

Dose – air = dose through inhalation, mg/kg/d

C_{air} = Concentration in air

{BR/BW} = Daily Breathing rate normalized to body weight, L/kg body weight-day

A = Inhalation absorption factor (unitless)

EF = Exposure frequency (unitless), days/365 days

10^{-6} = Micrograms to milligrams conversion, liters to cubic meters conversion

Cancer Risk Calculation

$RISK_{inh-res}$ = $DOSE_{air}$ x CPF x ASF x ED/AT x FAH

Where,

$RISK_{inh-res}$ = Residential inhalation cancer risk

$DOSE_{air}$ = Daily inhalation dose (mg/kg-day)

CPF = Inhalation cancer potency factor (mg/kg-day^{-1})

ASF = Age sensitivity factor for a specified age group (unitless)

ED = Exposure duration (in years) for a specific age group

AT = Averaging time for lifetime cancer risk (years)

FAH = Fraction of time at home (unitless)

Non-Cancer Health Hazards. Sensitive groups can also develop non-cancer health risks from exposure to TACs. Non-cancer health risks are evaluated from the ratio of TAC concentrations generated by the project and a reference exposure level (REL). A REL is the concentration of a given pollutant in the air at or below which no adverse health effects are anticipated for sensitive groups (OEHHA 2015). RELs are based on the most sensitive adverse effects reported in the medical and toxicological literature. The chronic inhalation REL for DPM is 5 $\mu g/m^3$ (OEHHA, 2019). The ratio of TAC generated by a project and the REL is referred to as a hazard quotient/index (HI). According to the VCAPCD, the non-cancer health hazard would be significant if the HI exceeds 1.0. The HI was calculated for each phase of construction and weighted for the duration that each receptor would be exposed over each phase of construction.

Health Risk Results

Off-Site Residential Cancer Risk

The maximum DPM concentration from construction and operational activities would occur at a receptor approximately 200 feet south of the project site, see **Table 2**. Consistent with the construction schedule, the Phase 1 of construction was assumed to occur during the third trimester and the first 0.75 years of the infant exposure (0 < 2 years). Phase 2 construction will occur over the next 0.5 years of infant exposure. Phases 2 and 3 of construction will occur simultaneously for the remainder of the infant exposure period and the first 0.25 years of the child exposure period (2<14 years). Upon completion of Phase 2 and 3, it is anticipated that some residences would become operational. Therefore, Phase 4 of construction would occur over one year of the child exposure (2 < 16 years) and include operational emissions resulting from Phase 2 and 3.[6] Phases 5 and 6 of construction would also occur during child exposure (2 < 16 years) and include the subsequent operational emissions from previous construction phases. Finally, full project buildout will result in exposure to the residential exposure over the remaining child exposure duration and throughout the adult exposure duration, detailed calculations are provided in **Attachment 1**. Results of this assessment indicate that the maximum excess residential cancer risk posed to the nearest residential receptor from project construction and operation is approximately 19.52 in one million, see **Table 5, Risk Posed to the Nearest Residential Receptor – Unmitigated**. Moreover, the HI would be significantly less than the VCAPCD threshold of 1.0.

Table 5
Risk Posed to the Nearest Residential Receptor

Receptor	Lifetime Excess Cancer Risk (per million)	Hazard Index
3rd Trimester	0.61	0.011
Infant	14.62	0.012
Child	3.82	0.006
Adult	0.47	0.002
Total 30-Year Cancer Risk	19.52	-
Significance Threshold	10	1.0
Exceed Threshold?	***Yes***	***No***

Source: Impact Sciences, 2020.
*The Hazard Index (HI) was calculated based on the average construction DPM emissions over the duration of each receptor.

6 Phase 3 of construction will not construct any homes on the project site nor will it attract vehicle trips, therefore the operational cancer risk resulting from Phase 3 is negligible. Phase 3 will occur over the last year of Phase 2 construction. Therefore, for clarity, when assessing the cancer risk posed from the homes constructed in Phase 2, the document states Phase 2 and 3 operational emissions.

Thus the 30-year residential cancer risk posed to the nearest residential receptor 200 feet from the site is approximately 19.52 in one million, calculations are provided in **Attachment 1**. As a result, the risk posed to the receptor is higher than VCAPCD's cancer risk thresholds. The highest cancer risks will occur during the infantile stages of life, during Phase 1 and Phase 2 of construction. Consistent with VCAPCD recommendations for construction projects that have the potential to emit significant levels of ROG and NOx emissions, the proposed project will implement **Mitigation Measures AQ-1** and **AQ-3**. These measures would also reduce DPM emissions during project construction by promoting the use of alternative fueled equipment, minimizing the idling time, and requiring equipment to be in good working odor. Additionally, project emissions were modeled assuming that equipment would operate for the eight hours per day that it is on the project site. In reality, this would not occur, as most equipment would operate for only a fraction of each workday and many of the activities would not overlap on a daily basis. Therefore, the cancer risk shown in **Table 3** represents a worst-case scenario during construction. Regardless, the project would be required to implement mitigation in order to reduce the impacts posed to the nearest residential receptor as a result of project construction. Specifically, the project will implement **Mitigation Measure AQ-4**, which will require to applicant to use Tier 4 final construction equipment throughout the duration of construction. **Table 6, Risk Posed to the Nearest Residential Receptor – Mitigated** demonstrates that with implementation of mitigation, the cancer risk posed to the nearest residential receptor located approximately 200 feet south of the project site is approximately 5.77 in one million and, therefore, will be less than significant.

Table 6
Risk Posed to the Nearest Residential Receptor - Mitigated

Receptor	Lifetime Excess Cancer Risk (per million)	Hazard Index
3rd Trimester	0.04	0.001
Infant	2.24	0.002
Child	3.02	0.002
Adult	0.47	0.002
Total 30-Year Cancer Risk	5.77	-
Significance Threshold	10	1.0
Exceed Threshold?	***No***	***No***

Source: Impact Sciences, 2020.
*The Hazard Index (HI) was calculated based on the average construction DPM emissions over the duration of each receptor.

Thus the 30-year residential cancer risk posed to the nearest residential receptor 200 feet from the site is approximately 5.77 in one million with implementation of **Mitigation Measure AQ-4** and are less than

VCAPCD's significance threshold of 10 in one million. **Attachment 2, AERMOD Figures** shows the DPM concentrations surrounding the project site and demonstrate that the highest concentration of DPM for an off-site receptor occurs at the residence 200 feet south of the site. Therefore, any other residence surrounding the project site would be exposed to a lower concentration of emissions, resulting in lower cancer risk. As a result, the cancer risk at any of the other residences near the project site would also be less than significant with the implementation of **Mitigation Measure AQ-4**.

ON-SITE RESIDENTIAL CANCER RISK

As noted above, following Phases 2 and 3 of construction, homes may be occupied and operational on the project site. As a result, there may be an on-site residential receptor during Phases 4 through 6 of construction. Therefore, the cancer risk posed to the most impacted on-site residential receptor was calculated in order to determine project significance. It was determined that the most impacted residence that will be constructed during Phase 2 would be located within Planning Area 2. The cancer risk was calculated following similar assumptions to the off-site residential cancer risk. However, it was assumed that the 3rd trimester and first 0.75 years of infant exposure (0 < 2 years) would occur during Phase 4 construction and Phase 2 and 3 operation. The remainder of the infant exposure and the beginning of child exposure (2 < 16 years) would occur over the one year of Phase 5 construction that overlaps with Phases 2 through 4 of operation. Finally, construction of Phase 6 and the operation of Phases 2 through 5 would occur over 0.75 years during child exposure. Full project buildout would occur over the remainder of the child exposure and the entire adult exposure duration (16 < 30 years), detailed calculations are provided in **Attachment 1**. Results of this analysis indicate that the cancer risk posed to the on-site residential receptor as a result of project construction and operation is approximately 5.78 in one million, see **Table 7, Risk Posed to the On-Site Residential Receptor**. As a result, the impact to the on-site sensitive receptor is less than significant.

Table 7
Risk Posed to the On-Site Residential Receptor

Receptor	Lifetime Excess Cancer Risk (per million)	Hazard Index
3rd Trimester	0.15	0.003
Infant	4.10	0.003
Child	1.34	0.003
Adult	0.19	0.001
Total 30-Year Cancer Risk	5.78	-
Significance Threshold	10	1.0
Exceed Threshold?	***No***	***No***

Source: Impact Sciences, 2020.
*The Hazard Index (HI) was calculated based on the average construction DPM emissions over the duration of each receptor.

Thus the 30-year residential cancer risk posed to an on-site residential receptor living on the site following Phase 2 of construction will be approximately 5.78 in one million and, as a result, less than VCAPCD's significance thresholds. Phase 2 of construction would result in housing on Plan Area's 2 through 4. As a result, the concentration of DPM emissions were evaluated at future receptor locations in each of these planning areas. The HRA evaluates the cancer risk posed to a receptor on Planning Area 2 as this proposed home location had the highest concentration of DPM emissions throughout the construction of the other project phases, as demonstrated in **Attachment 2, AERMOD Figures**. Therefore, any future receptor living on Planning Areas 3 or 4 following Phase 2 of construction would also result in a less than significant cancer risk impact.

SCHOOL CHILD CANCER RISK

As stated above, the project site is adjacent to two schools, the Walnut Creek Elementary School and Chaparral Middle School. In order to evaluate the risk posed to a school child, OEHHA recommends evaluating the risk posed over a nine-year period, assuming that the risk will be on the campus for approximately 165 days per year, where a student attends school 5 days per week for approximately 36 weeks over a nine-year period. OEHHA recommends that a 95th percentile breathing rate under moderate intensity of 520 L/kg-day be used to estimate the risk to the school child (2 < 16 years), see **Table 3**. It was assumed that the most impacted school child receptor would begin kindergarten at Walnut Creek Elementary School during the start of construction and upon completion of fifth grade, would attend Chaparral Middle School. Phases 1 through 6 of construction would occur when the receptor attends Walnut Creek Elementary. Full project operation occurs during the receptor's last year attending Walnut Creek Elementary School and while they attend Chaparral Middle School, detailed calculations are provided in **Attachment 1**. Results of this analysis indicate that the cancer risk posed to the school-child receptor as a result of project construction and operation is approximately 0.405 in one million, see **Table 8, Risk posed to the School Child Receptor**. As a result, the impact to the school child receptor is less than significant.

Table 8
Risk Posed to the School Child Receptor

Receptor	Grades	Excess Cancer Risk (per million)
Walnut Creek Elementary School	K-5th	0.187
Chaparral Middle School	6th-7th	0.218
Total Cancer Risk		0.405
Significance Threshold		*10*
	Exceed Threshold?	***No***

Source: Impact Sciences, 2020.

Thus the 9-year school child cancer risk posed to a student who attends Walnut Creek Elementary School from kindergarten to 5th grade starting at Phase 1 of construction then attends Chaparral Middle School for an additional two years is approximately 0.405 in one million and is less than VCAPCD's significance threshold of 10 in one million.

MITIGATION MEASURES

AQ-1: The following control measures provided in the *VCAPCD Air Quality Assessment Guidelines* to minimize the generation of fugitive dust (PM_{10} and $PM_{2.5}$), ROC, and NO_x during construction activities shall be implemented during construction of the proposed project:

- The area disturbed by clearing, grading, earth moving, or excavation operations shall be minimized to prevent excessive amounts of dust.

- Pre-grading/excavation activities shall include watering the areas to be graded or excavated before grading or excavation operations commences. Application of water (preferably reclaimed, if available) should penetrate sufficiently to minimize fugitive dust during grading activities.

- Fugitive dust produced during grading excavation and construction activities shall be controlled by the following activities:

  (a) All trucks shall be required to cover their loads as required by *California Vehicles Code* Section 23114.

(b) All graded and excavated material, exposed soil areas, and active portions of the construction site, including unpaved on-site roadways, shall be treated to prevent fugitive dust. Treatment shall include, but not necessarily be limited to, periodic watering, application of environmentally safe soil stabilization material, and/or roll-compaction as appropriate. Watering shall be done as often as necessary and reclaimed water shall be used whenever possible.

- Graded and/or excavated inactive areas of the construction site shall be monitored at least weekly for dust stabilization. Soil stabilization methods, such as water and roll-compaction, and environmentally safe dust control materials, shall be periodically applied to portions of the construction site that are inactive for over four days. If no further grading or excavation operations are planned for the area, the area should be seeded and watered until grass growth is evident, or periodically treated with environmentally safe dust suppressants to prevent excessive fugitive dust.

- Signs limiting traffic to 15 miles per hour or less shall be posted on site.

- During periods of high winds (i.e., wind speed sufficient to cause fugitive dust to impact adjacent properties), all clearing, grading, earth moving, and excavation operations shall be curtailed to the degree necessary to prevent fugitive dust created by on-site activities and operations from being a nuisance or hazard, either off site or on site. The site superintendent/supervisor shall use discretion in conjunction with the VCAPCD in determining when winds are excessive.

- Adjacent streets and roads shall be swept at least once per day, preferably at the end of the day if visible soil material is carried over to adjacent streets and roads.

- Personnel involved in grading operations, including contractors and subcontractors, should be advised to wear respiratory protection in accordance with California Division of Occupational Safety and Health regulations.

Timing/Implementation: During construction activities

Enforcement/Monitoring: City of Moorpark Community Development Department

AQ-2: During construction contractors shall comply with the following measures to reduce NO_x and ROC from heavy equipment as recommended by the VCAPCD in its *Ventura County Air Quality Assessment Guidelines*:

- Minimize equipment idling time.
- Maintain equipment engines in good condition and in proper tune as per manufacturer's specifications.
- Lengthen the construction period during smog season (May through October) to minimize the number of vehicles and equipment operating at the same time.
- Use alternatively fueled construction equipment, such as compressed natural gas (CNG), liquefied natural gas (LNG), or electric, if feasible.

Timing/Implementation: During construction activities

Enforcement/Monitoring: City of Moorpark Community Development Department

AQ-3: During heavy grading, construction contractors shall comply with the following measures to reduce potential Valley Fever impacts:

- Hire crews from local populations where possible, since it is more likely that they have been previously exposed to the fungus and are therefore immune.
- Require crews to use respirators during project clearing, grading, and excavation operations in accordance with California Division of Occupational Safety and Health regulations.
- Require that the cabs of grading and construction equipment be air-conditioned or enclosed with sufficient ventilation and particulate matter filtration systems.
- Require crews to work upwind from excavation sites where possible.
- Where acceptable to the fire department, control weed growth by mowing instead of disking, thereby leaving the ground undisturbed and with a mulch covering.

- During rough grading and construction, the access way into the project site from adjoining paved roadways should be paved or treated with environmentally safe dust control agents.

Timing/Implementation: During construction activities

Enforcement/Monitoring: City of Moorpark Community Development Department

AQ-4: For the entire duration of construction period, all off-road equipment greater than 25 horsepower shall have engines rated by the United States Environmental Protection Agency as complying with Tier 4 final emission limits.

Conclusion

The 30-year cancer risk posed to the nearest sensitive receptor, the 30-year cancer risk posed to an on-site residential receptor, and the 9-year cancer risk posed to the maximally exposed school child is approximately 19.52, 5.78, and 0.405 in one million, respectively. Therefore, the risks posed to the on-site residential receptor and the school child will be less than significant. With the application of **Mitigation Measure AQ-4**, which requires the use of Tier 4 final construction equipment throughout the duration of construction for any equipment above 50 horsepower, would reduce the 30-year cancer risk posed to the nearby residential receptor to approximately 5.77 in a million. Therefore, with the implementation of mitigation, the health risk will be less than significant. The risk calculations and assumptions are provided in **Attachment 1**. Figures demonstrating the DPM concentrations surrounding the project site are provided in **Attachment 2**.

Hitch Ranch

Ventura County, Annual

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
City Park	60.77	Acre	60.77	2,647,141.20	0
Apartments Low Rise	299.00	Dwelling Unit	18.69	299,000.00	915
Single Family Housing	456.00	Dwelling Unit	148.05	820,800.00	1395

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.6	**Precipitation Freq (Days)**	31
Climate Zone	8			**Operational Year**	2027
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	702.44	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Land uses consistent with Traffic Study trip generation table. City Park land use added to account for open space and recreation lots.

Construction Phase - Phase duration per project applicant.

Off-road Equipment -

Off-road Equipment -

Off-road Equipment -

Off-road Equipment -

Off-road Equipment -

Off-road Equipment -

Off-road Equipment -

Off-road Equipment -

Trips and VMT - Trips (worker and vendor) during building construction reflect proportion of project constructed during each phase. Grading material balanced on-site, no off-site hauling trips required.

Grading - Total acres graded per Hiitch Ranch Specific Plan Figure 2-1A. No import/export per project applicant for grading P1 and grading P3, balanced on-site. Other phases only fine grading for building pads; estimated acrage.

Architectural Coating - Coating square footage distributed by amount of project being constructed per phase.

Vehicle Trips - Trip rates from the TIA

Vehicle Emission Factors -

Vehicle Emission Factors -

Vehicle Emission Factors -

Area Coating -

Construction Off-road Equipment Mitigation - Fugitive dust mitigation reflects Section 7.4.1 "Fugitive Dust Mitigation Measures" of the VCAPCD Air Quality Assessment Guidelines Section 7.4.1.

Mobile Land Use Mitigation - The distance from the center of the project site to the Moorpark Metrolink Station is approximately 0.9 miles. General Plan requires 10 to 15% low income.

Area Mitigation -

Energy Mitigation - Mitigation requiring Energy-Star-qualified LEDs and 30% on-site renewable energy.

Water Mitigation - Consistent with CalGreen and Moorpark Water Efficient Landscape Ordinance.

Waste Mitigation - Waste Management (which serves Moorpark) states that 50% of waste in California is diverted away from landfills.

Fleet Mix -

3.1 Mitigation Measures Construction

Use Cleaner Engines for Construction Equipment

Use Soil Stabilizer

Replace Ground Cover

Water Exposed Area

Reduce Vehicle Speed on Unpaved Roads

3.2 Grading - 2022

Unmitigated Construction On-Site

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Land uses consistent with Traffic Study trip generation table. City Park land use added to account for open space and recreation lots.

Construction Phase - Phase duration per project applicant.

Off-road Equipment -

Off-road Equipment -

Off-road Equipment -

Off-road Equipment -

Off-road Equipment -

Off-road Equipment -

Off-road Equipment -

Off-road Equipment -

Trips and VMT - Trips (worker and vendor) during building construction reflect proportion of project constructed during each phase. Grading material balanced on-site, no off-site hauling trips required.

Grading - Total acres graded per Hiitch Ranch Specific Plan Figure 2-1A. No import/export per project applicant for grading P1 and grading P3, balanced on-site. Other phases only fine grading for building pads; estimated acrage.

Architectural Coating - Coating square footage distributed by amount of project being constructed per phase.

Vehicle Trips - Trip rates from the TIA

Vehicle Emission Factors -

Vehicle Emission Factors -

Vehicle Emission Factors -

Area Coating -

Construction Off-road Equipment Mitigation - Fugitive dust mitigation reflects Section 7.4.1 "Fugitive Dust Mitigation Measures" of the VCAPCD Air Quality Assessment Guidelines Section 7.4.1.

Mobile Land Use Mitigation - The distance from the center of the project site to the Moorpark Metrolink Station is approximately 0.9 miles. General Plan requires 10 to 15% low income.

Area Mitigation -

Energy Mitigation - Mitigation requiring Energy-Star-qualified LEDs and 30% on-site renewable energy.

Water Mitigation - Consistent with CalGreen and Moorpark Water Efficient Landscape Ordinance.

Waste Mitigation - Waste Management (which serves Moorpark) states that 50% of waste in California is diverted away from landfills.

Fleet Mix -

3.1 Mitigation Measures Construction

Use Cleaner Engines for Construction Equipment

Use Soil Stabilizer

Replace Ground Cover

Water Exposed Area

Reduce Vehicle Speed on Unpaved Roads

3.2 Grading - 2022

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
City Park	60.77	Acre	60.77	2,647,141.20	0
Apartments Low Rise	299.00	Dwelling Unit	18.69	299,000.00	915
Single Family Housing	456.00	Dwelling Unit	148.05	820,800.00	1395

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.6	**Precipitation Freq (Days)**	31
Climate Zone	8			**Operational Year**	2027
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	702.44	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Land uses consistent with Traffic Study trip generation table. City Park land use added to account for open space and recreation lots.

Construction Phase - Phase duration per project applicant.

Off-road Equipment -

Off-road Equipment -

Off-road Equipment -

Off-road Equipment -

Off-road Equipment -

Off-road Equipment -

Off-road Equipment -

Off-road Equipment -

Trips and VMT - Trips (worker and vendor) during building construction reflect proportion of project constructed during each phase. Grading material balanced on-site, no off-site hauling trips required.

Grading - Total acres graded per Hiitch Ranch Specific Plan Figure 2-1A. No import/export per project applicant for grading P1 and grading P3, balanced on-site. Other phases only fine grading for building pads; estimated acrage.

Architectural Coating - Coating square footage distributed by amount of project being constructed per phase.

Vehicle Trips - Trip rates from the TIA

Vehicle Emission Factors -

Vehicle Emission Factors -

Vehicle Emission Factors -

Area Coating -

Construction Off-road Equipment Mitigation - Fugitive dust mitigation reflects Section 7.4.1 "Fugitive Dust Mitigation Measures" of the VCAPCD Air Quality Assessment Guidelines Section 7.4.1.

Mobile Land Use Mitigation - The distance from the center of the project site to the Moorpark Metrolink Station is approximately 0.9 miles. General Plan requires 10 to 15% low income.

Area Mitigation -

Energy Mitigation - Mitigation requiring Energy-Star-qualified LEDs and 30% on-site renewable energy.

Water Mitigation - Consistent with CalGreen and Moorpark Water Efficient Landscape Ordinance.

Waste Mitigation - Waste Management (which serves Moorpark) states that 50% of waste in California is diverted away from landfills.

Fleet Mix -

3.1 Mitigation Measures Construction

Use Cleaner Engines for Construction Equipment

Use Soil Stabilizer

Replace Ground Cover

Water Exposed Area

Reduce Vehicle Speed on Unpaved Roads

3.2 Grading - 2022

 - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - -
- - - - - - - - - - - - - - - - - - - - - -

 **Model Is Setup For Calculation of Average CONCentration Values.

   --  DEPOSITION LOGIC  --
 **NO GAS DEPOSITION Data Provided.
 **NO PARTICLE DEPOSITION Data Provided.
 **Model Uses NO DRY DEPLETION.  DRYDPLT  =  F
 **Model Uses NO WET DEPLETION.  WETDPLT  =  F

 **Model Uses RURAL Dispersion Only.

 **Model Uses Regulatory DEFAULT Options:
        1. Stack-tip Downwash.
        2. Model Accounts for ELEVated Terrain Effects.
        3. Use Calms Processing Routine.
        4. Use Missing Data Processing Routine.
        5. No Exponential Decay.

 **Other Options Specified:
        CCVR_Sub - Meteorological data includes CCVR substitutions
        TEMP_Sub - Meteorological data includes TEMP substitutions

 **Model Assumes No FLAGPOLE Receptor Heights.

 **The User Specified a Pollutant Type of:  PM_2.5

 **Model Calculates  1 Short Term Average(s) of:   1-HR
     and Calculates ANNUAL Averages

 **This Run Includes:      1 Source(s);       1 Source Group(s); and     834
Receptor(s)

                with:      0 POINT(s), including
                           0 POINTCAP(s) and      0 POINTHOR(s)
                 and:      0 VOLUME source(s)
                 and:      1 AREA type source(s)
                 and:      0 LINE source(s)
                 and:      0 OPENPIT source(s)
                 and:      0 BUOYANT LINE source(s) with      0 line(s)

 **Model Set To Continue RUNning After the Setup Testing.

 **The AERMET Input Meteorological Data Version Date:  14134

 **Output Options Selected:
         Model Outputs Tables of ANNUAL Averages by Receptor
```

```
          Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE
Keyword)
          Model Outputs External File(s) of High Values for Plotting (PLOTFILE
Keyword)
          Model Outputs Separate Summary File of High Ranked Values (SUMMFILE
Keyword)

 **NOTE:  The Following Flags May Appear Following CONC Values:  c for Calm Hours
                                                                 m for Missing
Hours
                                                                 b for Both Calm
and Missing Hours

 **Misc. Inputs:  Base Elev. for Pot. Temp. Profile (m MSL) =    24.00 ;  Decay
Coef. =    0.000     ;  Rot. Angle =     0.0
                  Emission Units = GRAMS/SEC                                ;
Emission Rate Unit Factor =   0.10000E+07
                  Output Units   = MICROGRAMS/M**3

 **Approximate Storage Requirements of Model =      3.6 MB of RAM.

 **Input Runstream File:          aermod.inp

 **Output Print File:             aermod.out

 **Detailed Error/Message File:   11.3.err

 **File for Summary of Results:   11.3.sum

- - - - - - - - - - - - - - - - - - - - - - -

 **Model Is Setup For Calculation of Average CONCentration Values.

   --  DEPOSITION LOGIC  --
 **NO GAS DEPOSITION Data Provided.
 **NO PARTICLE DEPOSITION Data Provided.
 **Model Uses NO DRY DEPLETION.  DRYDPLT  =  F
 **Model Uses NO WET DEPLETION.  WETDPLT  =  F

 **Model Uses RURAL Dispersion Only.

 **Model Uses Regulatory DEFAULT Options:
         1. Stack-tip Downwash.
         2. Model Accounts for ELEVated Terrain Effects.
         3. Use Calms Processing Routine.
         4. Use Missing Data Processing Routine.
         5. No Exponential Decay.

 **Other Options Specified:
         CCVR_Sub - Meteorological data includes CCVR substitutions
         TEMP_Sub - Meteorological data includes TEMP substitutions

 **Model Assumes No FLAGPOLE Receptor Heights.

 **The User Specified a Pollutant Type of:  PM_2.5

 **Model Calculates  1 Short Term Average(s) of:   1-HR
     and Calculates ANNUAL Averages

 **This Run Includes:      1 Source(s);       1 Source Group(s); and     834
Receptor(s)

                with:      0 POINT(s), including
                           0 POINTCAP(s) and      0 POINTHOR(s)
                 and:      0 VOLUME source(s)
                 and:      1 AREA type source(s)
                 and:      0 LINE source(s)
                 and:      0 OPENPIT source(s)
                 and:      0 BUOYANT LINE source(s) with      0 line(s)

 **Model Set To Continue RUNning After the Setup Testing.

 **The AERMET Input Meteorological Data Version Date:  14134

 **Output Options Selected:
          Model Outputs Tables of ANNUAL Averages by Receptor
          Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE
```

Keyword)
          Model Outputs External File(s) of High Values for Plotting (PLOTFILE
Keyword)
          Model Outputs Separate Summary File of High Ranked Values (SUMMFILE
Keyword)

 **NOTE: The Following Flags May Appear Following CONC Values: c for Calm Hours
                                                                 m for Missing
Hours
                                                                 b for Both Calm
and Missing Hours

 **Misc. Inputs: Base Elev. for Pot. Temp. Profile (m MSL) =   24.00 ; Decay
Coef. =   0.000   ; Rot. Angle =   0.0
                  Emission Units = GRAMS/SEC   ;
Emission Rate Unit Factor =   0.10000E+07
                  Output Units   = MICROGRAMS/M**3

 **Approximate Storage Requirements of Model =   3.6 MB of RAM.

 **Input Runstream File: aermod.inp

 **Output Print File: aermod.out

 **Detailed Error/Message File: Phase 2_Unmitigated_11.3.err

 **File for Summary of Results: Phase 2_Unmitigated_11.3.sum

- - - - - - - - - - - - - - - - - - - - - - - - -

 **Model Is Setup For Calculation of Average CONCentration Values.

   --  DEPOSITION LOGIC  --
 **NO GAS DEPOSITION Data Provided.
 **NO PARTICLE DEPOSITION Data Provided.
 **Model Uses NO DRY DEPLETION.  DRYDPLT  =  F
 **Model Uses NO WET DEPLETION.  WETDPLT  =  F

 **Model Uses RURAL Dispersion Only.

 **Model Uses Regulatory DEFAULT Options:
        1. Stack-tip Downwash.
        2. Model Accounts for ELEVated Terrain Effects.
        3. Use Calms Processing Routine.
        4. Use Missing Data Processing Routine.
        5. No Exponential Decay.

 **Other Options Specified:
        CCVR_Sub - Meteorological data includes CCVR substitutions
        TEMP_Sub - Meteorological data includes TEMP substitutions

 **Model Assumes No FLAGPOLE Receptor Heights.

 **The User Specified a Pollutant Type of:  PM_2.5

 **Model Calculates  1 Short Term Average(s) of:   1-HR
     and Calculates ANNUAL Averages

 **This Run Includes:      1 Source(s);       1 Source Group(s); and     834
Receptor(s)

                with:      0 POINT(s), including
                           0 POINTCAP(s) and      0 POINTHOR(s)
                 and:      0 VOLUME source(s)
                 and:      1 AREA type source(s)
                 and:      0 LINE source(s)
                 and:      0 OPENPIT source(s)
                 and:      0 BUOYANT LINE source(s) with      0 line(s)

 **Model Set To Continue RUNning After the Setup Testing.

 **The AERMET Input Meteorological Data Version Date:  14134

 **Output Options Selected:
```

```
          Model Outputs Tables of ANNUAL Averages by Receptor
          Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE
Keyword)
          Model Outputs External File(s) of High Values for Plotting (PLOTFILE
Keyword)
          Model Outputs Separate Summary File of High Ranked Values (SUMMFILE
Keyword)

 **NOTE:  The Following Flags May Appear Following CONC Values:  c for Calm Hours
                                                                 m for Missing
Hours
                                                                 b for Both Calm
and Missing Hours

 **Misc. Inputs:  Base Elev. for Pot. Temp. Profile (m MSL) =    24.00 ;  Decay
Coef. =    0.000     ;  Rot. Angle =     0.0
                  Emission Units = GRAMS/SEC                              ;
Emission Rate Unit Factor =   0.10000E+07
                  Output Units   = MICROGRAMS/M**3

 **Approximate Storage Requirements of Model =      3.6 MB of RAM.

```
 **Model Is Setup For Calculation of Average CONCentration Values.

   --  DEPOSITION LOGIC  --
 **NO GAS DEPOSITION Data Provided.
 **NO PARTICLE DEPOSITION Data Provided.
 **Model Uses NO DRY DEPLETION.  DRYDPLT  =  F
 **Model Uses NO WET DEPLETION.  WETDPLT  =  F

 **Model Uses RURAL Dispersion Only.

 **Model Uses Regulatory DEFAULT Options:
        1. Stack-tip Downwash.
        2. Model Accounts for ELEVated Terrain Effects.
        3. Use Calms Processing Routine.
        4. Use Missing Data Processing Routine.
        5. No Exponential Decay.

 **Other Options Specified:
        CCVR_Sub - Meteorological data includes CCVR substitutions
        TEMP_Sub - Meteorological data includes TEMP substitutions

 **Model Assumes No FLAGPOLE Receptor Heights.

 **The User Specified a Pollutant Type of:  PM_2.5

 **Model Calculates  1 Short Term Average(s) of:   1-HR
     and Calculates ANNUAL Averages

 **This Run Includes:      1 Source(s);       1 Source Group(s); and     841
Receptor(s)

                with:      0 POINT(s), including
                           0 POINTCAP(s) and      0 POINTHOR(s)
                 and:      0 VOLUME source(s)
                 and:      1 AREA type source(s)
                 and:      0 LINE source(s)
                 and:      0 OPENPIT source(s)
                 and:      0 BUOYANT LINE source(s) with      0 line(s)

 **Model Set To Continue RUNning After the Setup Testing.

 **The AERMET Input Meteorological Data Version Date:  14134

 **Output Options Selected:
         Model Outputs Tables of ANNUAL Averages by Receptor
         Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE
Keyword)
         Model Outputs External File(s) of High Values for Plotting (PLOTFILE
```

Keyword)
          Model Outputs Separate Summary File of High Ranked Values (SUMMFILE
Keyword)

 **NOTE: The Following Flags May Appear Following CONC Values: c for Calm Hours
                                                                 m for Missing
Hours
                                                                 b for Both Calm
and Missing Hours

 **Misc. Inputs: Base Elev. for Pot. Temp. Profile (m MSL) =   24.00 ; Decay
Coef. =   0.000   ; Rot. Angle =   0.0
                  Emission Units = GRAMS/SEC   ;
Emission Rate Unit Factor =   0.10000E+07
                  Output Units   = MICROGRAMS/M**3

 **Approximate Storage Requirements of Model =   3.6 MB of RAM.

 **Input Runstream File: aermod.inp

 **Output Print File: aermod.out

 **Detailed Error/Message File: Phase5_Unmitigated_11.4.err

 **File for Summary of Results: Phase5_Unmitigated_11.4.sum

  ***
 - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - -
- - - - - - - - - - - - - - - - - - - - - -

 **Model Is Setup For Calculation of Average CONCentration Values.

   --  DEPOSITION LOGIC  --
 **NO GAS DEPOSITION Data Provided.
 **NO PARTICLE DEPOSITION Data Provided.
 **Model Uses NO DRY DEPLETION.  DRYDPLT  =  F
 **Model Uses NO WET DEPLETION.  WETDPLT  =  F

 **Model Uses RURAL Dispersion Only.

 **Model Uses Regulatory DEFAULT Options:
        1. Stack-tip Downwash.
        2. Model Accounts for ELEVated Terrain Effects.
        3. Use Calms Processing Routine.
        4. Use Missing Data Processing Routine.
        5. No Exponential Decay.

 **Other Options Specified:
        CCVR_Sub - Meteorological data includes CCVR substitutions
        TEMP_Sub - Meteorological data includes TEMP substitutions

 **Model Assumes No FLAGPOLE Receptor Heights.

 **The User Specified a Pollutant Type of:  PM_2.5

 **Model Calculates  1 Short Term Average(s) of:   1-HR
     and Calculates ANNUAL Averages

 **This Run Includes:      1 Source(s);       1 Source Group(s); and     834
Receptor(s)

                with:      0 POINT(s), including
                           0 POINTCAP(s) and      0 POINTHOR(s)
                 and:      0 VOLUME source(s)
                 and:      1 AREA type source(s)
                 and:      0 LINE source(s)
                 and:      0 OPENPIT source(s)
                 and:      0 BUOYANT LINE source(s) with      0 line(s)

 **Model Set To Continue RUNning After the Setup Testing.

 **The AERMET Input Meteorological Data Version Date:  14134

 **Output Options Selected:
         Model Outputs Tables of ANNUAL Averages by Receptor
```

```
          Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE
Keyword)
          Model Outputs External File(s) of High Values for Plotting (PLOTFILE
Keyword)
          Model Outputs Separate Summary File of High Ranked Values (SUMMFILE
Keyword)

 **NOTE:  The Following Flags May Appear Following CONC Values:  c for Calm Hours
                                                                 m for Missing
Hours
                                                                 b for Both Calm
and Missing Hours

 **Misc. Inputs:  Base Elev. for Pot. Temp. Profile (m MSL) =    24.00 ;  Decay
Coef. =    0.000     ;  Rot. Angle =     0.0
                  Emission Units = GRAMS/SEC                                ;
Emission Rate Unit Factor =   0.10000E+07
                  Output Units   = MICROGRAMS/M**3

 **Approximate Storage Requirements of Model =      3.6 MB of RAM.

 **Input Runstream File:          aermod.inp

 **Output Print File:             aermod.out

 **Detailed Error/Message File:   Phase1_Mitigated_11.3.err

 **File for Summary of Results:   Phase1_Mitigated_11.3.sum

 **Model Is Setup For Calculation of Average CONCentration Values.

   --  DEPOSITION LOGIC  --
 **NO GAS DEPOSITION Data Provided.
 **NO PARTICLE DEPOSITION Data Provided.
 **Model Uses NO DRY DEPLETION.  DRYDPLT  =  F
 **Model Uses NO WET DEPLETION.  WETDPLT  =  F

 **Model Uses RURAL Dispersion Only.

 **Model Uses Regulatory DEFAULT Options:
         1. Stack-tip Downwash.
         2. Model Accounts for ELEVated Terrain Effects.
         3. Use Calms Processing Routine.
         4. Use Missing Data Processing Routine.
         5. No Exponential Decay.

 **Other Options Specified:
         CCVR_Sub - Meteorological data includes CCVR substitutions
         TEMP_Sub - Meteorological data includes TEMP substitutions

 **Model Assumes No FLAGPOLE Receptor Heights.

 **The User Specified a Pollutant Type of:  PM_2.5

 **Model Calculates  1 Short Term Average(s) of:   1-HR
     and Calculates ANNUAL Averages

 **This Run Includes:      1 Source(s);       1 Source Group(s); and     834
Receptor(s)

                with:      0 POINT(s), including
                           0 POINTCAP(s) and      0 POINTHOR(s)
                 and:      0 VOLUME source(s)
                 and:      1 AREA type source(s)
                 and:      0 LINE source(s)
                 and:      0 OPENPIT source(s)
                 and:      0 BUOYANT LINE source(s) with      0 line(s)

 **Model Set To Continue RUNning After the Setup Testing.

 **The AERMET Input Meteorological Data Version Date:  14134

 **Output Options Selected:
          Model Outputs Tables of ANNUAL Averages by Receptor
          Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE
```

Keyword)
          Model Outputs External File(s) of High Values for Plotting (PLOTFILE
Keyword)
          Model Outputs Separate Summary File of High Ranked Values (SUMMFILE
Keyword)

 **NOTE: The Following Flags May Appear Following CONC Values: c for Calm Hours
                                                                 m for Missing
Hours
                                                                 b for Both Calm
and Missing Hours

 **Misc. Inputs: Base Elev. for Pot. Temp. Profile (m MSL) =   24.00 ; Decay
Coef. =   0.000   ; Rot. Angle =   0.0
                  Emission Units = GRAMS/SEC   ;
Emission Rate Unit Factor =   0.10000E+07
                  Output Units   = MICROGRAMS/M**3

 **Approximate Storage Requirements of Model =   3.6 MB of RAM.

 **Input Runstream File: aermod.inp

 **Output Print File: aermod.out

 **Detailed Error/Message File: Phase2_Mitigated_11.3.err

 **File for Summary of Results: Phase2_Mitigated_11.3.sum

```

```
  ***
 - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - -
- - - - - - - - - - - - - - - - - - - - - -

 **Model Is Setup For Calculation of Average CONCentration Values.

   --  DEPOSITION LOGIC  --
 **NO GAS DEPOSITION Data Provided.
 **NO PARTICLE DEPOSITION Data Provided.
 **Model Uses NO DRY DEPLETION.  DRYDPLT  =  F
 **Model Uses NO WET DEPLETION.  WETDPLT  =  F

 **Model Uses RURAL Dispersion Only.

 **Model Uses Regulatory DEFAULT Options:
        1. Stack-tip Downwash.
        2. Model Accounts for ELEVated Terrain Effects.
        3. Use Calms Processing Routine.
        4. Use Missing Data Processing Routine.
        5. No Exponential Decay.

 **Other Options Specified:
        CCVR_Sub - Meteorological data includes CCVR substitutions
        TEMP_Sub - Meteorological data includes TEMP substitutions

 **Model Assumes No FLAGPOLE Receptor Heights.

 **The User Specified a Pollutant Type of:  PM_2.5

 **Model Calculates  1 Short Term Average(s) of:   1-HR
     and Calculates ANNUAL Averages

 **This Run Includes:      1 Source(s);       1 Source Group(s); and     834
Receptor(s)

                with:      0 POINT(s), including
                           0 POINTCAP(s) and      0 POINTHOR(s)
                 and:      0 VOLUME source(s)
                 and:      1 AREA type source(s)
                 and:      0 LINE source(s)
                 and:      0 OPENPIT source(s)
                 and:      0 BUOYANT LINE source(s) with      0 line(s)

 **Model Set To Continue RUNning After the Setup Testing.

 **The AERMET Input Meteorological Data Version Date:  14134

 **Output Options Selected:
         Model Outputs Tables of ANNUAL Averages by Receptor
```

```
          Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE
Keyword)
          Model Outputs External File(s) of High Values for Plotting (PLOTFILE
Keyword)
          Model Outputs Separate Summary File of High Ranked Values (SUMMFILE
Keyword)

 **NOTE:  The Following Flags May Appear Following CONC Values:  c for Calm Hours
                                                                 m for Missing
Hours
                                                                 b for Both Calm
and Missing Hours

 **Misc. Inputs:  Base Elev. for Pot. Temp. Profile (m MSL) =    24.00 ;  Decay
Coef. =    0.000     ;  Rot. Angle =     0.0
                  Emission Units = GRAMS/SEC                                ;
Emission Rate Unit Factor =   0.10000E+07
                  Output Units   = MICROGRAMS/M**3

 **Approximate Storage Requirements of Model =      3.6 MB of RAM.

 **Input Runstream File:          aermod.inp

 **Output Print File:             aermod.out

 **Detailed Error/Message File:   Phase&3Construction_Mitigated_11.3.err

 **File for Summary of Results:   Phase&3Construction_Mitigated_11.3.sum
